Thank you for becoming the owner of a new Kia vehicle.

As a global car manufacturer focused on building high-quality, value for money prices, Kia Motors is dedicated to providing you with a customer service experience that exceeds your expectations.

At all of our Kia dealerships you will be treated with warmth, hospitality and professionalism by people who care based on our “Family-like Care” promise.

All information contained in this Owner’s Manual was accurate at the time of publication. However, Kia reserves the right to make changes at any time so that our policy of continual product improvement can be carried out.

This manual applies to all models of this vehicle and includes descriptions and explanations of optional as well as standard equipment. As a result, you may encounter material in this manual that is not applicable to your specific Kia vehicle.

Enjoy your vehicle and Kia’s “Family-like Care” experience!
Thank you for choosing a Kia vehicle.

This manual will familiarize you with operational, maintenance and safety information about your new vehicle. It is supplemented by a Warranty and Maintenance book that provides important information on all warranties regarding your vehicle. Kia urges you to read these publications carefully and follow the recommendations to help assure an enjoyable and safe operation of your new vehicle.

Kia offers a great variety of options, components and features for its various models. Therefore, some of the equipment described in this manual, along with the various illustrations, may not be applicable to your particular vehicle.

The information and specifications provided in this manual were accurate at the time of printing. Kia reserves the right to discontinue or change specifications or design at any time without notice and without incurring any obligation. If you have questions, Kia recommends to check with an authorized Kia dealer/service partner.

Kia assures you of our continuing interest in your motoring pleasure and satisfaction in your Kia vehicle.

HOW TO USE THIS MANUAL

We want to help you get the greatest possible driving pleasure from your vehicle. Your Owner's Manual can assist you in many ways. We strongly recommend that you read the entire manual. In order to minimize the chance of death or injury, you must read the WARNING and CAUTION sections in the manual.

Illustrations complement the words in this manual to best explain how to enjoy your vehicle. By reading your manual, you learn about features, important safety information, and driving tips under various road conditions.

The general layout of the manual is provided in the Table of Contents. Use the index when looking for a specific area or subject; it has an alphabetical listing of all information in your manual.

Sections: This manual has eight sections plus an index. Each section begins with a brief list of contents so you can tell at a glance if that section has the information you want.

You will find various WARNINGs, CAUTIONs, and NOTICEs in this manual. These WARNINGs were prepared to enhance your personal safety. You should carefully read and follow ALL procedures and recommendations provided in these WARNINGs, CAUTIONs and NOTICEs.

WARNING

A WARNING indicates a situation in which harm, serious bodily injury or death could result if the warning is ignored.

CAUTION

A CAUTION indicates a situation in which damage to your vehicle could result if the caution is ignored.

NOTICE

A NOTICE indicates interesting or helpful information is being provided.
FUEL REQUIREMENTS

Gasoline engine

Unleaded
For Europe
For the optimal vehicle performance, we recommend you to use unleaded gasoline with an octane rating of RON (Research Octane Number) 95 / AKI (Anti-Knock Index) 91 or higher. (Do not use methanol blended fuels.)
You may use unleaded gasoline with an octane rating of RON 91~94 / AKI 87~90 but it may result in slight performance reduction of the vehicle.

Except Europe
Your new Kia vehicle is designed to use only unleaded fuel having an Octane Rating of RON (Research Octane Number) 91 / AKI (Anti-Knock Index) 87 or higher. (Do not use methanol blended fuels.)
Your new vehicle is designed to obtain maximum performance with UNLEADED FUEL, as well as minimize exhaust emissions and spark plug fouling.

⚠️ CAUTION

NEVER USE LEADED FUEL. The use of leaded fuel is detrimental to the catalytic converter and will damage the engine control system's oxygen sensor and affect emission control.
Never add any fuel system cleaning agents to the fuel tank other than what has been specified. (Kia recommends to consult an authorized Kia dealer/service partner for details.)

⚠️ WARNING

• Do not "top off" after the nozzle automatically shuts off when re-fueling.
• Always check that the fuel cap is installed securely to prevent fuel spillage in the event of an accident.

Leaded (if equipped)
For some countries, your vehicle is designed to use leaded gasoline. When you are going to use leaded gasoline, Kia recommends to visit an authorized Kia dealer/service partner and ask whether leaded gasoline in your vehicle is available or not.
Octane Rating of leaded gasoline is same with unleaded one.

Gasoline containing alcohol and methanol
Gasohol, a mixture of gasoline and ethanol (also known as grain alcohol), and gasoline or gasohol containing methanol (also known as wood alcohol) are being marketed along with or instead of leaded or unleaded gasoline.
Do not use gasohol containing more than 10% ethanol, and do not use gasoline or gasohol containing any methanol. Either of these fuels may cause drivability problems and damage to the fuel system, engine control system and emission control system.
Discontinue using gasohol of any kind if drivability problems occur. Vehicle damage or drivability problems may not be covered by the manufacturer’s warranty if they result from the use of:
Introduction

1. Gasohol containing more than 10% ethanol.
2. Gasoline or gasohol containing methanol.
3. Leaded fuel or leaded gasohol.

⚠️ CAUTION

Never use gasohol which contains methanol. Discontinue use of any gasohol product which impairs drivability.

Other fuels

Using fuels such as
- Silicone (Si) contained fuel,
- MMT (Manganese, Mn) contained fuel,
- Ferrocene (Fe) contained fuel, and
- Other metallic additives contained fuels, may cause vehicle and engine damage or cause plugging, misfiring, poor acceleration, engine stalling, catalyst melting, abnormal corrosion, life cycle reduction, etc. Also, the Malfunction Indicator Lamp (MIL) may illuminate.

* NOTICE

Damage to the fuel system or performance problem caused by the use of these fuels may not be covered by your New Vehicle Limited Warranty.

Use of MTBE

Kia recommends avoiding fuels containing MTBE (Methyl Tertiary Butyl Ether) over 15.0% vol. (Oxygen Content 2.7% weight) in your vehicle.

Fuel containing MTBE over 15.0% vol. (Oxygen Content 2.7% weight) may reduce vehicle performance and produce vapor lock or hard starting.

⚠️ CAUTION

Your New Vehicle Limited Warranty may not cover damage to the fuel system and any performance problems that are caused by the use of fuels containing methanol or fuels containing MTBE (Methyl Tertiary Butyl Ether) over 15.0% vol. (Oxygen Content 2.7% weight.)

Do not use methanol

Fuels containing methanol (wood alcohol) should not be used in your vehicle. This type of fuel can reduce vehicle performance and damage components of the fuel system, engine control system and emission control system.

Fuel Additives

Kia recommends that you use unleaded gasoline which has an octane rating of RON (Research Octane Number) 95 / AKI (Anti Knock Index) 91 or higher (for Europe) or Octane Rating of RON (Research Octane Number) 91 / AKI (Anti Knock Index) 87 or higher (except Europe).

For customers who do not use good quality gasolines including fuel additives regularly, and have problems starting or the engine does not run smoothly, one bottle of additives added to the fuel tank at every 15,000 km (For Europe)/10,000 km (Except Europe). Additives are available from a professional workshop along with information on how to use them. Kia recommends to visit an authorized Kia dealer/service partner.
**Operation in foreign countries**
If you are going to drive your vehicle in another country, be sure to:
- Observe all regulations regarding registration and insurance.
- Determine that acceptable fuel is available.

**Diesel engine**

**Diesel fuel**
Diesel engine must be operated only on commercially available diesel fuel that complies with EN 590 or comparable standard. (EN stands for “European Norm”). Do not use marine diesel fuel, heating oils, or non-approved fuel additives, as this will increase wear and cause damage to the engine and fuel system. The use of non-approved fuels and / or fuel additives will result in a limitation of your warranty rights. Diesel fuel of above cetane 51 is used in your vehicle. If two types of diesel fuel are available, use summer or winter fuel properly according to the following temperature conditions.
- Above -5°C (23°F) ... Summer type diesel fuel.
- Below -5°C (23°F) ... Winter type diesel fuel.

Watch the fuel level in the tank very carefully: If the engine stops through fuel failure, the circuits must be completely purged to restart.

⚠️ **CAUTION**
Do not let any gasoline or water enter the tank. This would make it necessary to drain it out and to bleed the lines to avoid jamming the injection pump and damaging the engine.

⚠️ **CAUTION**

养殖 Diesel Fuel (if equipped with DPF)
It is recommended to use the regulated automotive diesel fuel for diesel vehicle equipped with the DPF system.
If you use diesel fuel including high sulfur (more than 50 ppm sulfur) and unspecified additives, it can cause the DPF system to be damaged and white smoke can be emitted.

⚠️ **CAUTION**
- Never use any fuel, whether diesel or B7 biodiesel or otherwise, that fails to meet the latest petroleum industry specification.
- Never use any fuel additives or treatments that are not recommended or approved by the vehicle manufacturer.

**Biodiesel**
Commercially supplied Diesel blends of no more than 7% biodiesel, commonly known as “B7 Diesel” may be used in your vehicle if Biodiesel meets EN 14214 or equivalent specifications. (EN stands for “European Norm”). The use of biofuels exceeding 7% made from rapeseed methyl ester (RME), fatty acid methyl ester (FAME), vegetable oil methyl ester (VME) etc. or mixing diesel exceeding 7% with biodiesel will cause increased wear or damage to the engine and fuel system. Repair or replacement of worn or damaged components due to the use of non approved fuels will not be covered by the manufactures warranty.
VEHICLE BREAK-IN PROCESS

No special break-in period is needed. By following a few simple precautions for the first 1,000 km (600 miles) you may add to the performance, economy and life of your vehicle.

• Do not race the engine.
• While driving, keep your engine speed (rpm, or revolutions per minute) within 3,000 rpm.
• Do not maintain a single speed for long periods of time, either fast or slow. Varying engine speed is needed to properly break-in the engine.
• Avoid hard stops, except in emergencies, to allow the brakes to seat properly.
• Don't tow a trailer during the first 2,000 km (1,200 miles) of operation.

15. Seatback folding lever (for 5 Door)

*if equipped
\textbf{WARNING}

\textbullet\ Loose objects

Loose objects in the driver’s foot area could interfere with the operation of the foot pedals, possibly causing an accident. Do not place anything under the front seats.

\textbf{WARNING}

\textbullet\ Uprighting seat

When you return the seatback to its upright position, hold the seatback and return it slowly and be sure there are no other occupants around the seat. If the seatback is returned without being held and controlled, the back of the seat could move forward or backward resulting in accidental injury to a person struck by the seatback.

\textbf{WARNING}

\textbullet\ Driver responsibility for passengers

(Continued)

\textbf{WARNING}

(Continued)

Do not use a sitting cushion that reduces friction between the seat and passenger. The passenger’s hips may slide under the lap portion of the seat belt during an accident or a sudden stop. Serious or fatal internal injuries could result because the seat belt cannot operate normally.

\textbf{WARNING}

\textbullet\ Driver’s seat

- Never attempt to adjust the seat while the vehicle is moving. This could result in loss of control, and an accident causing death, serious injury, or property damage.
- Do not allow anything to interfere with the normal position of the seatback. Storing items against a seatback or in any other way interfering with proper locking of a seatback could result in serious or fatal injury in a sudden stop or collision.

(Continued)
(Continued)

- Always drive and ride with your seatback upright and the lap portion of the seat belt snug and low across the hips. This is the best position to protect you in case of an accident.
- In order to avoid unnecessary and perhaps severe air bag injuries, always sit as far back as possible from the steering wheel while maintaining comfortable control of the vehicle. We recommend that your chest be at least 25 cm (10 inches) away from the steering wheel.

⚠️ WARNING

- Rear seatbacks
  - The rear seatback must be securely latched. If not, passengers and objects could be thrown forward resulting in serious injury or death in the event of a sudden stop or collision.

(Continued)

- Luggage and other cargo should be laid flat in the cargo area. If objects are large, heavy, or must be piled, they must be secured. Under no circumstances should cargo be piled higher than the seatbacks. Failure to follow these warnings could result in serious injury or death in the event of a sudden stop, collision or rollover.
- No passenger should ride in the cargo area or sit or lie on folded seatbacks while the vehicle is moving. All passengers must be properly seated in seats and restrained properly while riding.
- When resetting the seatback to the upright position, make sure it is securely latched by pushing it forward and backwards.
- To avoid the possibility of burns, do not remove the carpet in the cargo area. Emission control devices beneath this floor generate high temperatures.

⚠️ WARNING

- After adjusting the seat, always check that it is securely locked into place by attempting to move the seat forward or backward without using the lock release lever. Sudden or unexpected movement of the driver’s seat could cause you to lose control of the vehicle resulting in an accident.

⚠️ WARNING

- Do not adjust the seat while wearing seat belts. Moving the seat cushion forward may cause strong pressure on the abdomen.
- Use extreme caution so that hands or other objects are not caught in the seat mechanisms while the seat is moving.
- Do not put a cigarette lighter on the floor or seat. When you operate the seat, gas may gush out of the lighter and cause fire.

(Continued)
Front seat adjustment - manual
Forward and backward

To move the seat forward or backward:

1. Pull the seat slide adjustment lever up and hold it.
2. Slide the seat to the position you desire.
3. Release the lever and make sure the seat is locked in place.

Adjust the seat before driving, and make sure the seat is locked securely by trying to move forward and backward without using the lever. If the seat moves, it is not locked properly.

Seat height (for driver’s seat)

To recline the seatback:
1. Lean forward slightly and lift up the seatback recline lever.
2. Carefully lean back on the seat and adjust the seatback of the seat to the position you desire.
3. Release the lever and make sure the seatback is locked in place. (The lever MUST return to its original position for the seatback to lock.)

To change the height of the seat, push the lever upwards or downwards.
- To lower the seat cushion, push the lever down several times.
- To raise the seat cushion, pull the lever up several times.
Lumbar support (for driver’s seat, if equipped)

The lumbar support can be adjusted by pressing the lumbar support switch on the side of the seat.

1. Press the front portion of the switch to increase support, or the rear portion of the switch, to decrease support.
2. Release the switch once it reaches the desired position.

Front seat adjustment – power (if equipped)

The front seat can be adjusted by using the control switches located on the outside of the seat cushion. Before driving, adjust the seat to the proper position so you can easily control the steering wheel, pedals and switches on the instrument panel.

**WARNING**

The power seat is operable with the ignition OFF. Therefore, children should never be left unattended in the vehicle.

**CAUTION**

- The power seat is driven by an electric motor. Stop operating once the adjustment is completed. Excessive operation may damage the electrical equipment.

(Continued)

- When in operation, the power seat consumes a large amount of electrical power. To prevent unnecessary charging system drain, don’t adjust the power seat longer than necessary while the engine is not running.
- Do not operate two or more power seat control switches at the same time. Doing so may result in power seat motor or electrical component malfunction.

(Continued)
Push the control switch forward or backward to move the seat to the desired position. Release the switch once the seat reaches the desired position.

Push the control switch forward or backward to move the seatback to the desired angle. Release the switch once the seat reaches the desired position.

Pull the front portion of the control switch up to raise or press down to lower the front part of the seat cushion. Pull the rear portion of the control switch up to raise or press down to lower the rear part of the seat cushion. Release the switch once the seat reaches the desired position.
Lumbar support (for driver’s seat, if equipped)

The lumbar support can be adjusted by pressing the lumbar support switch on the side of the seat. Press the front portion of the switch to increase support, or the rear portion of the switch, to decrease support. Release the switch once it reaches the desired position.

Driver position memory system (if equipped, for power seat)

A driver position memory system is provided to store and recall the driver seat position with a simple button operation. By saving the desired position into the system memory, different drivers can reposition the driver seat based upon their driving preference. If the battery is disconnected, the position memory will be erased and the driving position should be restored in the system.

WARNING

Never attempt to operate the driver position memory system while the vehicle is moving. This could result in loss of control, and an accident causing death, serious injury, or property damage.

Storing positions into memory using the buttons on the door

Storing driver’s seat positions
1. Vehicle speed is below 3 km/h and the engine start/stop button is ON or ignition switch ON.
2. Adjust the driver’s seat comfortably for the driver.
3. Press SET button on the control panel. The system will beep once.
4. Press one of the memory buttons (1 or 2) within 5 seconds after pressing the SET button. The system will beep twice when memory has been successfully stored.

Recalling positions from memory
1. Vehicle speed is below 3 km/h.
2. To recall the position in the memory, press the desired memory button (1 or 2). The system will beep once, then the driver’s seat will automatically adjust to the stored position.

Adjusting the control switch for the driver’s seat while the system is recalling the stored position will cause the movement to stop and move in the direction that the control switch is moved.

**WARNING**

Use caution when recalling the adjustment memory while sitting in the vehicle. Push the seat position control switch to the desired position immediately if the seat moves too far in any direction.

**Easy access function (if equipped)**

The system will move the driver’s seat automatically as follows:

- **Without smart key system**
  - It will move the driver’s seat forward when the ignition key is inserted.

- **With smart key system**
  - It will move the driver’s seat rearward when the engine start/stop button is changed to the OFF position and front driver’s door is opened.
  - It will move the driver’s seat forward when you get in your vehicle with the smart key after closing the driver’s door.

You can activate or deactivate this feature. Refer to “User settings” on page 4-72.

The driver’s and front passenger’s seats are equipped with a headrest for the occupant’s safety and comfort. The headrest not only provides comfort for the driver and front passenger, but also helps to protect the head and neck in the event of a collision.
**WARNING**

- For maximum effectiveness in case of an accident, the headrest should be adjusted so the middle of the headrest is at the same height of the center of gravity of an occupant’s head. Generally, the center of gravity of most people’s head is similar with the height of the top of their eyes. Also, adjust the headrest as close to your head as possible. For this reason, the use of a cushion that holds the body away from the seatback is not recommended.

- Do not operate the vehicle with the headrests removed as severe injury to the occupants may occur in the event of an accident. Headrests may provide protection against neck injuries when properly adjusted.

- Do not adjust the headrest position of the driver’s seat while the vehicle is in motion.

**CAUTION**

When there is no occupant in the rear seats, adjust the height of the headrest to the lowest position. The rear seat headrest can reduce the visibility of the rear area.

**WARNING**

To raise the headrest, pull it up to the desired position (1). To lower the headrest, push and hold the release button (2) on the headrest support and lower the headrest to the desired position (3).

**WARNING**

Make sure the headrest locks in position after adjusting it for proper protection of the occupants.
CAUTION

If you recline the seatback towards the front with the headrest and seat cushion raised, the headrest may come in contact with the sunvisor or other parts of the vehicle.

Removal and installation

1. Recline the seatback (2) with the recline switch (1).

2. Raise headrest as far as it can go.

3. Press the headrest release button (3) while pulling the headrest up (4).

WARNING

NEVER allow anyone to ride in a seat with the headrest removed.

To remove the headrest:

1. Recline the seatback (2) with the recline switch (1).
To reinstall the headrest:
1. Put the headrest poles (2) into the holes while pressing the release button (1).

2. Recline the seatback (4) with the recline switch or lever (3).
3. Adjust the headrest to the appropriate height.

**WARNING**

Always make sure the headrest locks into position after reinstalling and adjusting it properly.

The headrest may be adjusted forward to 4 different positions by pulling the headrest forward to the desired detent. To adjust the headrest to its farthest backwards position, pull it fully forward to the farthest position and release it. Adjust the headrest so that it properly supports the head and neck.
Rear seat entry (for 2 door)

The driver and front passenger’s seatback should be tilted to enter the rear seat.

By pulling up the walk-in seat lever (1) on the back of the driver and front passenger’s seatback, the seatback will tilt forward. Then push the seat forward to allow the occupants to enter. By pulling up the seatback, the seatback will recline and return to the original position.

The seatback pocket is provided on the back of the front passenger’s seatback.

Never attempt to adjust the seat while the vehicle is moving or when the passenger’s seat is occupied as the seat may suddenly move and injure the passenger.

Do not put heavy or sharp objects in the seatback pockets. In an accident they could come loose from the pocket and injure vehicle occupants.
Rear seat adjustment  
Headrest (if equipped)

The rear seat(s) is equipped with headrests in all the seating positions for the occupant’s safety and comfort. The headrest not only provides comfort for passengers, but also helps protect the head and neck in the event of a collision.

**WARNING**

- For maximum effectiveness in case of an accident, the headrest should be adjusted so the middle of the headrest is at the same height of the center of gravity of an occupant’s head. Generally, the center of gravity of most people’s head is similar with the height of the top of their eyes. Also adjust the headrest as close to your head as possible. For this reason, the use of a cushion that holds the body away from the seatback is not recommended.

- Do not operate the vehicle with the headrests removed. Severe injury to an occupant may occur in the event of an accident. Headrests may provide protection against severe neck injuries when properly adjusted.

**CAUTION**

When there is no occupant in the rear seats, adjust the height of the headrest to the lowest position. The rear seat headrest can reduce the visibility of the rear area.

Adjusting the height up and down

To raise the headrest, pull it up to the desired position (1). To lower the headrest, push and hold the release button (2) on the headrest support and lower the headrest to the desired position (3).
Removal

To remove the headrest, raise it as far as it can go then press the release button (1) while pulling the headrest up (2).
To reinstall the headrest, put the headrest poles (3) into the holes while pressing the release button (1). Then adjust it to the appropriate height.

⚠️ WARNING
Make sure the headrest locks in position after adjusting it to properly protect the occupants.

Armrest (if equipped)

The armrest is located in the center of the rear seat. Pull the armrest down from the seatback.

Folded rear seat (if equipped)
The rear seatbacks may be folded to facilitate carrying long items or to increase the luggage capacity of the vehicle.

⚠️ WARNING
The purpose of the fold-down rear seatbacks is to allow you to carry longer objects than could not otherwise be accommodated.
Never allow passengers to sit on top of the folded down seatback while the car is moving as this is not a proper seating position and no seat belts are available for use. This could result in serious injury or death in case of an accident or sudden stop.
Objects carried on the folded down seatback should not extend higher than the top of the front seats. This could allow cargo to slide forward and cause injury or damage during sudden stops.
To fold down the rear seatback:

1. Make sure the rear seat belt webbing is in the guide to prevent the seat belt from being damaged.
2. Set the front seatback to the upright position and if necessary, slide the front seat forward.
3. Lower the rear headrests to the lowest position.
4. Pull out the seatback locking knob(1) in the trunk, then fold the seat toward the front of the vehicle.

- 4 door, 2 door
5. To use the rear seat, lift and pull the seatback backward. Pull the seatback firmly until it clicks into place. Make sure the seatback is locked in place.

6. Return the rear seat belt to the proper position.

If the seat belt locks after unfolding the rear seatback, pull out the locked seat belt, release it then pull it out again.

3. Pull the lock release lever (1) and fold the rear seatback forward and down firmly.

4. To use the rear seat, lift and pull the seatback backward. Pull the seatback firmly until it clicks into place. Make sure the seatback is locked in place. When you return the seatback to its upright position, always be sure it has locked into position by pushing on the top of the seatback.

If you can not see the red line at the folding lever, it means the seatback is locked completely.

5 door
1. Set the front seatback to the up-right position and if necessary, slide the front seat forward.

2. Lower the rear headrests to lowest position.

(Continued)

When you return the seatback to its upright position, hold the seatback and return it slowly. If the seatback is returned without holding it, the back of the seat could spring forward resulting in injury caused by being struck by the seatback.

⚠️ WARNING

When you return the rear seatback to its upright position after being folded down:
Be careful not to damage the seat belt webbing or buckle. Do not allow the seat belt webbing or buckle to get caught or pinched in the rear seat. Ensure that the seatback is completely locked into its upright position by pushing on the top of the seatback. Otherwise, in an accident or sudden stop, the seat could fold down and allow cargo enter the passenger compartment, which could result in serious injury or death.

⚠️ WARNING

After folding the rear seat, unless the driver’s position is properly set according to the driver’s physical figure, do not fold the rear seat. It may increase body injuries in a sudden stop or collision.

⚠️ WARNING

- Uprighting seat

(Continued)
CAUTION

- Damaging rear seat belt buckles
When you fold the rear seatback, insert the buckle between the rear seatback and cushion. Doing so can prevent the buckle from being damaged by the rear seatback.

CAUTION

- Rear seat belts
When returning the rear seatbacks to the upright position, remember to return the rear shoulder belts to their proper position.

WARNING

- Cargo loading
Make sure the engine is off, the automatic transaxle/dual clutch transmission is in P (Park) or the manual transaxle is in 1st, and the parking brake is securely applied whenever loading or unloading cargo. Failure to take these steps may allow the vehicle to move if the shift lever is inadvertently moved to another position.

WARNING

- Cargo
Cargo should always be secured to prevent it from being thrown about the vehicle in a collision and causing injury to the vehicle occupants. Do not place objects in the rear seats, since they cannot be properly se-
(Continued)
SEAT BELTS

Seat belt restraint system

⚠️ WARNING

- For maximum restraint system protection, the seat belts must always be used whenever the vehicle is moving.
- Seat belts are most effective when seatbacks are in the upright position.
- Children age 12 and under must always be properly restrained in the rear seat. Never allow children to ride in the front passenger seat. If a child over 12 must be seated in the front seat, he/she must be properly belted and the seat should be moved as far back as possible.
- Never wear the shoulder belt under your arm or behind your back. An improperly positioned shoulder belt can cause serious injuries in a crash. The shoulder belt should be positioned midway over your shoulder across your collarbone.

(Continued)

- Avoid wearing twisted seat belts. A twisted belt can’t do its job well. In a collision, it could even cut into you. Be sure the belt webbing is straight and not twisted.
- Be careful not to damage the belt webbing or hardware. If the belt webbing or hardware is damaged, replace it.
- Never wear a seat belt over fragile objects. If there is a sudden stop or impact, the seat belt can damage it.

⚠️ WARNING

Seat belts are designed to bear upon the bony structure of the body, and should be worn low across the front of the pelvis or the pelvis, chest and shoulders, as applicable: wearing the lap section of the belt across the abdominal area must be avoided. Seat belts should be adjusted as firmly as possible, consistent with comfort, to provide the protection for which they have been designed.

(Continued)

A slack belt will greatly reduce the protection afforded to the wearer. Care should be taken to avoid contamination of the webbing with polishes, oils and chemicals, and particularly battery acid. Cleaning may safely be carried out using mild soap and water. The belt should be replaced if webbing becomes frayed, contaminated or damaged. It is essential to replace the entire assembly after it has been worn in a severe impact even if damage to the assembly is not obvious. Belts should not be worn with straps twisted. Each belt assembly must only be used by one occupant; it is dangerous to put a belt around a child being carried on the occupant’s lap.

(Continued)
As a reminder to the driver, the driver’s seat belt warning lights will illuminate for approximately 6 seconds each time you turn the ignition switch ON regardless of belt fastening. If the driver’s seat belt is not fastened when the ignition switch is turned ON or if it is disconnected after the ignition switch is turned ON, the seat belt warning light will illuminate until the belt is fastened. If you continue not to fasten the seat belt and you drive over 9 km/h, the illuminated warning light will start to blink until you drive under 6 km/h. If you continue not to fasten the seat belt and you drive over 20 km/h (12 mph) the seat belt warning chime will sound for approximately 100 seconds and the corresponding warning light will blink.

* NOTICE

- You can find the front passenger’s seat belt warning light on the center fascia panel.

(Continued)
(Continued)

- Although the front passenger seat is not occupied, the seat belt warning light will blink or illuminate for 6 seconds.
- The front passenger’s seat belt warning may operate when luggage is placed on the front passenger seat.

**WARNING**

Riding in an improper position adversely affects the front passenger’s seat belt warning system. It is important for the driver to instruct the passenger as to the proper seating instructions as contained in this manual.

---

**Lap/shoulder belt**

To fasten your seat belt:

To fasten your seat belt, pull it out of the retractor and insert the metal tab (1) into the buckle (2). There will be an audible "click" when the tab locks into the buckle.

The seat belt automatically adjusts to the proper length only after the lap belt portion is adjusted manually so that it fits snugly around your hips. If you lean forward in a slow, easy motion, the belt will extend and let you move around. If there is a sudden stop or impact, however, the belt will lock into position. It will also lock if you try to lean forward too quickly.

---

**NOTICE**

If you are not able to pull out the safety belt from the retractor, firmly pull the belt out and release it. Then you will be able to pull the belt out smoothly.

---

**Height adjustment (front, for 4Door, 5Door)**

You can adjust the height of the shoulder belt anchor to one of the 4 positions for maximum comfort and safety.
The height of the adjusting seat belt should not be too close to your neck. The shoulder portion should be adjusted so that it lies across your chest and midway over your shoulder near the door and not your neck.

To adjust the height of the seat belt anchor, lower or raise the height adjuster into an appropriate position.

To raise the height adjuster, pull it up (1). To lower it, push it down (3) while pressing the height adjuster button (2). Release the button to lock the anchor into position. Try sliding the height adjuster to make sure that it has locked into position.

Improperly positioned seat belts can cause serious injuries in an accident.

**WARNING**

- Verify that the shoulder belt anchor is locked into position at the appropriate height. Never position the shoulder belt across your neck or face.

(Continued)

- **Failure to replace seat belts after an accident could leave you with damaged seat belts that will not provide protection in the event of another collision leading to personal injury or death. Replace your seat belts after being in an accident as soon as possible.**

(Continued)

- **your hips, not on your waist. If the lap belt is located too high on your waist, it may increase the chance of injury in the event of a collision. Both arms should not be under or over the belt. Rather, one should be over and the other under, as shown in the illustration. Never wear the seat belt under the arm that is near the door.**

When using the rear center seat belt, the buckle with the “CENTER” mark must be used. (if equipped)
To release the seat belt:
The seat belt is released by pressing the release button (1) on the locking buckle. When it is released, the belt should automatically draw back into the retractor.
If this does not happen, check the belt to be sure it is not twisted, then try again.

To fasten your seat belt:
To fasten a 2-point static type belt, insert the metal tab (1) into the locking buckle (2). There will be an audible “click” when the tab locks into the buckle. Check to make sure the belt is properly locked and the belt is not twisted.
With a 2-point static type seat belt, the length must be adjusted manually so it fits snugly around your body. Fasten the belt and pull on the loose end to tighten. The belt should be placed as low as possible on your hips, not on your waist. If the belt is too high, it could increase the possibility of injury in an accident.

When using the rear center seat belt, the buckle with the “CENTER” mark must be used.

To release the seat belt:
When you want to release the seat belt, press the button (1) in the locking buckle.

**WARNING**

The center lap belt latching mechanism is different from those for the rear seat shoulder belts. When fastening the rear seat shoulder belts or the center lap belt, make sure they are inserted into the correct buckles to obtain maximum protection from the seat belt system and assure proper operation.

You can adjust the position of the shoulder belt extension guide for easier access to the shoulder belt. Set the belt extension guide to the position (1–3) when using the seat belt.
Pre-tensioner seat belt (if equipped)

Your vehicle is equipped with driver's and front passenger's pre-tensioner seat belts. The purpose of the pre-tensioner is to make sure that the seat belts fit tightly against the occupant's body in certain collisions. The pre-tensioner seat belts may be activated in crashes where the collision is severe enough.

When the vehicle stops suddenly, or if the occupant tries to lean forward too quickly, the seat belt retractor will lock into position. In certain collisions, the pre-tensioner will activate and pull the seat belt into tighter contact against the occupant's body.

If the system senses excessive tension on the driver or passenger's seat belt when the pre-tensioner activates, the load limiter inside the pre-tensioner will release some of the pressure on the affected seat belt. (if equipped)

* NOTICE

- if equipped with rollover sensor
  The pre-tensioner will activate not only in a frontal collision but also in a side collision or rollover, if the vehicle is equipped with a side or curtain air bag.

- NOTICE

- without rollover sensor

(Continued)

The pre-tensioner will activate not only in a frontal collision but also in a side collision, if the vehicle is equipped with a side or curtain air bag.

**WARNING**

For your safety, be sure that the belt webbing is not loose or twisted and always sit properly on your seat.

The seat belt pre-tensioner system consists mainly of the following components. Their locations are shown in the illustration:
1. SRS air bag warning light
2. Front retractor pre-tensioner assembly
3. SRS control module

**WARNING**

To obtain maximum benefit from a pre-tensioner seat belt:
1. The seat belt must be worn correctly and adjusted to the proper position. Please read and follow all of the important information and precautions about your vehicle's occupant safety features – including seat belts and air bags – that are provided in this manual.
2. Be sure you and your passengers always wear seat belts properly.

**NOTICE**

- When the pre-tensioner seat belts are activated, a loud noise may be heard and fine dust, which may appear to be smoke, may be visible in the passenger compartment. These are normal operating conditions and are not hazardous.
- Although it is harmless, the fine dust may cause skin irritation and should not be breathed for prolonged periods. Wash all exposed skin areas thoroughly after an accident in which the pre-tensioner seat belts were activated.

**NOTICE**

Because the sensor that activates the SRS air bag is connected with the pre-tensioner seat belt, the SRS air bag warning light (_temperature) on the instrument panel will illuminate for approximately 6 seconds after the ignition switch has been turned to the ON position, and then it should turn off.

**CAUTION**

If the pre-tensioner seat belt is not working properly, the SRS air bag warning light will illuminate even if there is no malfunction of the SRS air bag. If the SRS air bag warning light does not illuminate when the ignition key is turned to ON, or if it remains illuminated after illuminating for approximately 6 seconds, or if it illuminates while the vehicle is being driven, have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
WARNING

- Pre-tensioners are designed to operate only one time. After activation, pre-tensioner seat belts must be replaced. All seat belts, of any type, should always be replaced after they have been worn during a collision.
- The pre-tensioner seat belt assembly mechanisms become hot during activation. Do not touch the pre-tensioner seat belt assemblies for several minutes after they have been activated.
- Do not attempt to inspect or replace the pre-tensioner seat belts yourself. Have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
- Do not attempt to service or repair the pre-tensioner seat belt system in any manner.

(Continued)

- Improper handling of the pre-tensioner seat belt assemblies, and failure to heed the warnings not to strike, modify, inspect, replace, service or repair the pre-tensioner seat belt assemblies may lead to improper operation or inadvertent activation and serious injury.
- Always wear the seat belts when driving or riding in a motor vehicle.
- If the vehicle or pre-tensioner seat belt must be discarded, contact a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
- Body work on the front area of the vehicle may damage the pre-tensioner seat belt system. Therefore, have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Seat belt precautions

WARNING

All occupants of the vehicle must wear their seat belts at all times. Seat belts and child restraints reduce the risk of serious or fatal injuries for all occupants in the event of a collision or sudden stop. Without a seat belt, occupants could be shifted too close to a deploying air bag, strike the interior structure or be thrown from the vehicle. Properly worn seat belts greatly reduce these hazards.

Always follow the precautions about seat belts, air bags and occupant seating contained in this manual.

Infant or small child

You should be aware of the specific requirements in your country. Child and/or infant seats must be properly placed and installed in the rear seat. For more information about the use of these restraints, refer to “Child restraint system” on page 3-31.
\textbf{WARNING}

Every person in your vehicle needs to be properly restrained at all times, including infants and children. Never hold a child in your arms or lap when riding in a vehicle. The violent forces created during a crash will tear the child from your arms and throw the child against the interior. Always use a child restraint appropriate for your child's height and weight.

\textbf{NOTICE}

Small children are best protected from injury in an accident when properly restrained in the rear seat by a child restraint system that meets the requirements of the Safety Standards of your country. Before buying any child restraint system, make sure that it has a label certifying that it meets Safety Standards of your country. The restraint must be appropriate for your child's height and weight. Check the

(Continued)

(label on the child restraint for this information. Refer to 3-31.

\textbf{Larger children}

Children who are too large for child restraint systems should always occupy the rear seat and use the available lap/shoulder belts. The lap portion should be fastened and snuggered on the hips and as low as possible. Check if the belt fits periodically. A child's squirming could put the belt out of position. Children are given the most safety in the event of an accident when they are restrained by a proper restraint system in the rear seat. If a larger child (over age 12) must be seated in the front seat, the child should be securely restrained by the available lap/shoulder belt and the seat should be placed in the rearmost position. Children age 12 and under should be restrained securely in the rear seat. NEVER place a child age 12 and under in the front seat. NEVER place a rear facing child seat in the front seat of a vehicle.

If the shoulder belt portion slightly touches the child's neck or face, try placing the child closer to the center of the vehicle. If the shoulder belt still touches their face or neck they need to be returned to a child restraint system.

\textbf{WARNING}

- \textbf{Shoulder belts on small children}
  - Never allow a shoulder belt to be in contact with a child's neck or face while the vehicle is in motion.
  - If seat belts are not properly worn and adjusted on children, there is a risk of death or serious injury.

\textbf{Pregnant women}

The use of a seat belt is recommended for pregnant women to lessen the chance of injury in an accident. When a seat belt is used, the lap belt portion should be placed as low and securely as possible on the hips, not across the abdomen. For specific recommendations, consult a physician.
**WARNING**

- Pregnant women

Pregnant women must never place the lap portion of the safety belt over the area of the abdomen where the fetus is located or above the abdomen where the belt could crush the fetus during an impact.

**Injured person**

A seat belt should be used when an injured person is being transported. When this is necessary, you should consult a physician for recommendations.

**One person per belt**

Two people (including children) should never attempt to use a single seat belt. This could increase the severity of injuries in case of an accident.

**Do not lie down**

To reduce the chance of injuries in the event of an accident and to achieve maximum effectiveness of the restraint system, all passengers should be sitting up and the front and rear seats should be in an upright position when the vehicle is moving. A seat belt cannot provide proper protection if the person is lying down in the rear seat or if the front and rear seats are in a reclined position.

---

**WARNING**

Riding with a reclined seatback increases your chance of serious or fatal injuries in the event of a collision or sudden stop. The protection of your restraint system (seat belts and air bags) is greatly reduced by reclining your seat. Seat belts must be secured against your hips and chest to work properly. The more the seatback is reclined, the greater the chance an occupant’s hips will slide under the lap belt causing serious internal injuries. Also, the shoulder belt may strike the occupant’s

---

(Continued)

Care of seat belts

Seat belt systems should never be disassembled or modified. In addition, care should be taken to assure that seat belts and belt hardware are not damaged by seat hinges, doors or other abuse.
**WARNING**

- When you return the rear seatback to its upright position after the rear seatback has been folded down, be careful not to damage the seat belt webbing or buckle. Be sure that the webbing or buckle does not get caught or pinched in the rear seat. A seat belt with damaged webbing or buckle could possibly fail during a collision or sudden stop, resulting in serious injury. If the webbing or buckles are damaged, get them replaced immediately.

- Seatbelts can become hot in a vehicle that has been closed up in sunny weather. They could burn infants and children.

**Keep belts clean and dry**

Seat belts should be kept clean and dry. If belts become dirty, they can be cleaned by using a mild soap solution and warm water. Bleach, dye, strong detergents or abrasives should not be used because they may damage and weaken the fabric.

**When to replace seat belts**

Entire in-use seat belt assembly or assemblies should be replaced if the vehicle has been involved in an accident. This should be done even if no damage is visible. In this case, have the system replaced by a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.

**Periodic inspection**

All seat belts should be inspected periodically for wear or damage of any kind. Any damaged parts should be replaced as soon as possible.
CHILD RESTRAINT SYSTEM

Children riding in the vehicle should sit in the rear seat and must always be properly restrained to minimize the risk of injury in an accident, sudden stop or sudden maneuver. According to accident statistics, children are safer when properly restrained in the rear seats than in the front seat. Larger children not in a child restraint should use one of the seat belts provided. You should be aware of the specific requirements in your country. Child and/or infant safety seats must be properly placed and installed in the rear seat. You must use a commercially available child restraint system that meets the requirements of the Safety Standards of your country. Child restraint systems are designed to be secured in vehicle seats by lap belts or the lap belt portion of a lap/shoulder belt, or by a tether anchor and/or ISO-FIX anchors (if equipped).

Children could be injured or killed in a crash if their restraints are not properly secured. For small children and babies, a child seat or infant seat must be used. Before buying a particular child restraint system, make sure it fits your vehicle seat and seat belts, and fits your child. Follow all the instructions provided by the manufacturer when installing the child restraint system.

⚠️ WARNING

- To ensure the safety of your child, we strongly recommend a child restraint system to be installed in the rear seats. When installing a child restraint on the front passenger's seat, the air bag must be deactivated and set to the OFF position. (if equipped, passenger's air bag ON/OFF switch)
- A seat belt or child restraint system can become very hot if it is left in a closed vehicle on a sunny day, even if the outside temperature does not feel hot. Be sure to check the seat cover and buckles before placing a child there.

(Continued)

- When the child restraint system is not in use, store it in the luggage area or fasten it with a seat belt or ISOFIX anchorage, so that it will not be thrown forward in case of a sudden stop or an accident.
- All children, even those too large for child restraints, should ride in the rear seat. All children, even those too large for child restraints, should ride in the rear seats.

⚠️ WARNING

To reduce the chance of serious or fatal injuries:
- Children of all ages are safer when restrained in the rear seat. A child riding in the front passenger seat can be forcefully struck by an inflating air bag resulting in serious or fatal injuries.
- Always follow the child restraint system manufacturer’s instructions for installation and use of the child restraint.

(Continued)
Always make sure the child seat is secured properly in the vehicle and your child is securely restrained in the child seat.

Never hold a child in your arms or lap when riding in a vehicle. The violent forces created during a crash will tear the child from your arms and throw the child against the vehicle's interior.

Never put a seat belt over yourself and a child. During a crash, the belt could press deep into the child causing serious internal injuries.

Never leave children unattended in a vehicle — not even for a short time. The vehicle can heat up very quickly, resulting in serious injuries to children inside. Even very young children may inadvertently cause the vehicle to move, entangle themselves in the windows, or lock themselves or others inside the vehicle.

Never allow two children, or any two persons, to use the same seat belt.

Children often squirm and reposition themselves improperly. Never let a child ride with the shoulder belt under their arm or behind their back. Always properly position and secure children in the rear seat.

Never allow a child to standup or kneel on the seat or floor of a moving vehicle. During a collision or sudden stop, the child can be violently thrown against the vehicle's interior, resulting in serious injury.

Never use an infant carrier or a child safety seat that "hooks" over a seatback, it may not provide adequate security in an accident.

Seat belts can become very hot, especially when the vehicle is parked in direct sunlight. Always check the seat belt buckles before fastening them over a child.
Using a child restraint system

For small children and babies, the use of a child seat or infant seat is required. The child seat or infant seat should be of appropriate size for the child and should be installed in accordance with the manufacturer’s instructions. For safety reasons, we recommend that the child restraint system be used in the rear seats.

**WARNING**

Never place a rear-facing child restraint in the front passenger seat, because of the danger an inflating passenger-side air bag could impact the rear-facing child restraint and kill the child.

**WARNING**

- Child seat installation

(Continued)

- A child can be seriously injured or killed in a collision if the child restraint is not properly anchored to the vehicle and the child is not properly restrained in the child restraint. Before installing the child restraint system, read the instructions supplied by the child restraint system manufacturer.

- If the seat belt does not operate as described in this section, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

- Failure to observe this manual’s instructions regarding child restraint systems and the instructions provided with the child restraint system could increase the chance and/or severity of injury in an accident.

- If the vehicle headrest prevents proper installation of a child seat (as described in the child seat system manual), the headrest of the respective seating position shall be readjusted or entirely removed.
To install a child restraint system on the seat, do the following:

1. For stable and safe installation of child restraint system, adjust the vehicle seat (seatback angle and/or seat forward and backward) so that your child can fit in the child restraint system in a comfortable manner. To properly accommodate child restraint systems in all adjustment positions, the front passenger seat may be moved rearwards with the seat back not passing beyond the seat belt shoulder anchor. Place the child restraint system in the seat and route the lap/shoulder belt around or through the child restraint system, following the child restraint system manufacturer’s instructions. Be sure the seat belt webbing is not twisted.

2. Fasten the lap/shoulder belt latch into the buckle. Listen for the distinct “click” sound. Position the release button so that it is easy to access in case of an emergency.

3. Buckle the seat belt and allow the seat belt to take up any slack. After installation of the child restraint system, try to move it in all directions to be sure the child restraint system is securely installed.
If you need to tighten the belt, pull the webbing toward the retractor. When you unbuckle the seat belt and allow it to retract, the retractor will automatically revert back to its normal seated passenger emergency locking usage condition.

**Installing a child restraint system with a lap belt (on the center rear seat) (if equipped) - Except Europe**

3. Route the lap belt through the restraint according to the restraint manufacturer’s instructions.

4. Buckle the seat belt and adjust the lap belt for a snug hold on the child restraint by pulling on the loose end of the belt. After installation of the child restraint system, try to move it in all directions to be sure the child restraint system is securely installed.

To install a child restraint system on the center rear seats, do the following:

1. Place the child restraint system on the center rear seat.

2. Extend the latch plate tongue of the lap belt.
**Child seat restraint suitability for seat position using the seat belt**

Use child safety seats that have been officially approved and are appropriate for your children. When using the child safety seats, refer to the following table.

<table>

</tr>
</tbody>
</table>

U: suitable for "universal" category restraints approved for use in this mass group  
X: seat position not suitable for children in this mass group
Securing a child restraint seat with tether anchor system (if equipped)

1. Route the child restraint system top tether over the seatback. For vehicles with adjustable headrest, route the top tether under the headrest and between the headrest posts, otherwise route the top tether over the top of the seatback. In case of interference between the child restraint system and the headrest remove the particular head restraint for better fitment of the child restraint system.

2. Connect and tighten the top tether to the corresponding child restraint system to secure the child restraint system.

**WARNING**

A child can be seriously injured or killed in a collision if the child restraint is not properly anchored to the car and the child is not properly restrained in the child restraint. Always follow the child seat manufacturer’s instructions for installation and use.

**WARNING**

**Tether strap**

Never mount more than one child restraint to a single tether or to a single lower anchorage point. The increased load caused by multiple seats may cause the tethers or anchorage points to break, causing serious injury or death.
**WARNING**

**Child restraint check**
Check that the child restraint system is secure by pushing and pulling it in different directions. Incorrectly fitted child restraints may swing, twist, tip or separate causing death or serious injury.

**WARNING**

**Child restraint anchorage**
- Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used for adult seat belts or harnesses or for attaching other items or equipment to the vehicle.
- The tether strap may not work properly if attached somewhere other than the correct tether anchor.

### Securing a child restraint system with “ISOFIX” system and “Tether Anchorage” system (if equipped)

ISOFIX is a standardized method of fitting child seats that eliminates the need to use the standard adult seat belt to secure the seat in the vehicle. This enables a much more secure and positive location with the added benefit of easier and quicker installation. An ISOFIX-seat may only be installed if it has vehicle-specific or universal approval in accordance with the requirements of ECE-R 44.

- **ISOFIX**: International Standards Organisation FIX

There are ISOFIX symbols located on the lower portion of each side of the rear seatbacks. These symbols indicate the position of the lower anchors for child restraints so equipped. Both rear outboard seats are equipped with a pair of ISOFIX anchorages as well as a corresponding top tether anchorage on the back side of the back rest. The ISOFIX anchorages are located between seat cushion and back rest, marked with the ISOFIX icon.

For installation, CRS ISOFIX connecters have to engage with the vehicles ISOFIX anchorages (listen for a CLICK, check potential visual indicators on the CRS and crosscheck by pulling).
CRS with universal approval to ECER 44 need to be fixed additionally with a top tether strap connected to the corresponding top tether anchorage point in the back rest.
The installing and the use of a child seat has to be done according to the installing-manual, which is added to the ISO-FIX-seat.

⚠️ WARNING
Install the child restraint seat fully rearward against the seatback with the seatback reclined two positions from the most upright latched position.

⚠️ WARNING

- When using the vehicle’s "ISOFIX" system to install a child restraint system in the rear seat, all unused vehicle rear seat belt metal latch plates or tabs must be latched securely in their seat belt buckles and the seat belt webbing must be retracted behind the child restraint to prevent the child from reaching and taking hold of unretracted seat belts. Unlatched metal latch plates or tabs may allow the child to reach the unretracted seat belts which may result in strangulation and a serious injury or death to the child in the child restraint.
- Do not place anything around the lower anchors. Also make sure that the seat belt is not caught in the ISOFIX anchors.

To secure the child restraint seat

1. To engage the child restraint seat to the ISOFIX anchor, insert the child restraint seat latch into the ISOFIX anchor. Listen for the audible “click” sound.

⚠️ CAUTION

Do not allow the rear seat belt webbing to get scratched or pinched by the ISOFIX-seat latch and ISOFIX anchor during installation.

2. Connect the tether strap hook to the child restraint hook holder and tighten to secure the seat. (Refer to “Securing a child restraint system with “ISOFIX” system and “Tether Anchorage” system (if equipped)” on page 3-38.)
**WARNING**

- Do not install a child restraint seat at the center of the rear seat using the vehicle's ISOFIX anchors. The ISOFIX anchors are only provided for the left and right outboard rear seating positions. Do not misuse the ISOFIX anchors by attempting to attach a child restraint seat in the middle of the rear seat to the ISOFIX anchors. In a crash, the child restraint seat ISOFIX attachments may not be strong enough to secure the child restraint seat properly in the center of the rear seat and may break, causing serious injury or death.

- Do not mount more than one child restraint to a child restraint lower anchorage point. The increased load may cause the anchorage points or tether anchor to break, causing serious injury or death.

(Continued)

(Continued)

- Attach the ISOFIX or ISOFIX-compatible child restraint seat only to the appropriate locations shown in the illustration.

- Always follow the installation and use instructions provided by the manufacturer of the child restraint.

AIR BAG – SUPPLEMENTAL RESTRAINT SYSTEM (IF EQUIPPED)

1. Driver’s front air bag
2. Passenger’s front air bag
3. Side air bag
4. Curtain air bag

*if equipped

WARNING

- Even in vehicles with air bags, you and your passengers must always wear the safety belts provided in order to minimize the risk and severity of injury in the event of a collision or rollover.
- SRS and pretensioners contain explosive chemicals. If scrapping a vehicle without removing SRS and pretensioners from a vehicle, it may cause fire. Before scrapping a vehicle, contact a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

(Continued)
How does the air bag system operate

- Air bags are activated (able to inflate if necessary) only when the ignition switch is turned to the ON or START position.
- Air bags inflate instantly in the event of a serious frontal collision or side collision (if equipped with a side air bag or curtain air bag) in order to help protect the occupants from serious physical injury.

**NOTICE**

- If equipped with rollover sensor

(Continued)

Also, the air bags inflate instantly in the event of a rollover (if equipped with a side air bag or curtain air bag) in order to help protect the occupants from serious physical injury.

- There is no single speed at which the air bags will inflate. Generally, air bags are designed to inflate based upon the severity of a collision and its direction. These two factors determine whether the sensors produce an electronic deployment/inflation signal.
- Air bag deployment depends on a number of factors including vehicle speed, angles of impact and the density and stiffness of the vehicles or objects which your vehicle hits in the collision. The determining factors are not limited to those mentioned above.

(Continued)

- The front air bags will completely inflate and deflate in an instant. It is virtually impossible for you to see the air bags inflate during an accident. It is much more likely that you will simply see the deflated air bags hanging out of their storage compartments after the collision.
- In order to help provide protection in a severe collision, the air bags must inflate rapidly. The speed of the air bag inflation is a consequence of extremely short time in which a collision occurs and the need to inflate the air bag between the occupant and the vehicle structures before the occupant impacts those structures. This speed of inflation reduces the risk of serious or life-threatening injuries in a severe collision and is thus a necessary part of the air bag design. However, air bag inflation can also cause injuries which can include facial abrasions, bruises and broken bones because the inflation speed also causes the air bags to expand with a great deal of force.
There are even circumstances under which contact with the steering wheel air bag can cause fatal injuries, especially if the occupant is positioned excessively close to the steering wheel.

**WARNING**

- To avoid severe personal injury or death caused by deploying air bags in a collision, the driver should sit as far back from the steering wheel air bag as possible (at least 250 mm (10 inches) away). The front passengers should always move their seats as far back as possible and sit back in their seat.

- Air bags inflate instantly in the event of a collision, and passengers may be injured by the air bag expansion force if they are not in a proper position.

- Air bag inflation may cause injuries including facial or bodily abrasions, injuries from broken glasses or burns.

*Noise and smoke*

When the air bags inflate, they make a loud noise and they leave smoke and powder in the air inside of the vehicle. This is normal and is a result of the ignition of the air bag inflator. After the air bag inflates, you may feel substantial discomfort in breathing due to the contact of your chest with both the seat belt and the air bag, as well as from breathing the smoke and powder.

Open your doors and/or windows as soon as possible after the impact in order to reduce discomfort and prevent prolonged exposure to smoke and powder.

Though the smoke and powder are non-toxic, they may cause irritation to the skin (eyes, nose and throat, etc). If this is the case, wash and rinse with cold water immediately and consult a doctor if the symptom persists.

**WARNING**

When the air bags deploy, the air bag related parts in the steering wheel, instrument panel, front seats and/or in both sides of the roof rails (Continued)
Do not install a child restraint on the front passenger’s seat

Never place a rear-facing child restraint in the front passenger’s seat. If the air bag deploys, it would impact the rear-facing child restraint, causing serious or fatal injury.
In addition, do not place front-facing child restraints in the front passenger’s seat either. If the front passenger air bag inflates, it could cause serious or fatal injuries to the child.

⚠️ WARNING

• NEVER use a rearward facing child restraint on a seat protected by an ACTIVE AIRBAG in front of it, DEATH or SERIOUS INJURY to the CHILD can occur.
• Never put a child restraint in the front passenger’s seat. If the front passenger air bag inflates, it can cause serious or fatal injuries.

(Continued)

• When children are seated in the rear outboard seats of a vehicle equipped with side and/or curtain air bags, be sure to install the child restraint system as far away from the door side as possible, and securely lock the child restraint system in position. Inflation of side and/or curtain air bags could cause serious injury or death to an infant or child.
The purpose of the air bag warning light in your instrument panel is to alert you of a potential problem with your air bag - Supplemental Restraint System (SRS).

When the ignition switch is turned ON, the warning light should illuminate for approximately 6 seconds, then go off. Have the system checked if:

- The light does not turn on briefly when you turn the ignition ON.
- The light stays on after illuminating for approximately 6 seconds.
- The light comes on while the vehicle is in motion.

- The light blinks when the ignition switch is in ON position.

**Passenger’s front air bag ON indicator (if equipped)**

The passenger’s front air bag ON indicator illuminates for approximately 4 seconds after the ignition switch is turned to the ON position.

The passenger’s front air bag ON indicator also comes on when the passenger’s front air bag ON/OFF switch is set to the ON position and goes off after approximately 60 seconds.

**Passenger’s front air bag OFF indicator (if equipped)**

The passenger’s front air bag OFF indicator illuminates for about 4 seconds after the ignition switch is turned to the ON position.

The passenger’s front air bag OFF indicator also comes on when the passenger’s front air bag ON/OFF switch is set to the OFF position and goes off when the passenger’s front air bag ON/OFF switch is set to the ON position.
**CAUTION**

If the passenger's front air bag ON/OFF switch malfunctions, the passenger's front air bag OFF indicator will not illuminate (The passenger's front air bag ON indicator comes on and goes off after approximately 60 seconds) and the passenger’s front air bag will inflate in a frontal impact even if the passenger’s front air bag ON/OFF switch is set to the OFF position. In this case, have the passenger’s front air bag ON/OFF switch and the SRS air bag system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

The SRS consists of the following components:

1. Driver's front air bag module*
2. Passenger's front air bag module*
3. Side air bag modules*
4. Curtain air bag modules*
5. Retractor pre-tensioner assemblies*
6. Air bag warning light*
7. SRS control module (SRSCM)* / Roll-over sensor*

*if equipped

8. Front impact sensors*
9. Side impact sensors*
10. Passenger’s front air bag ON/OFF switch*
11. Passenger’s front air bag ON/OFF lamp*

The SRSCM continually monitors all SRS components while the is ON to determine if a crash impact is severe enough to require air bag deployment or pre-tensioner seat belt deployment. The SRS air bag warning light "airbag icon" on the instrument panel will illuminate for about 6 seconds after the ignition switch is turned to the ON position, after which the SRS air bag warning light "airbag icon" should go out.

**WARNING**

If any of the following conditions occurs, this indicates a malfunction of the SRS. In this case, have the system inspected by a professional workshop. Kia recommends to visit (Continued)
(Continued)
an authorized Kia dealer/service partner.
• The light does not turn on briefly when you turn the ignition ON.
• The light stays on after illuminating for approximately 6 seconds.
• The light comes on while the vehicle is in motion.
• The light blinks when the ignition switch is in ON position.

The front air bag modules are located both in the center of the steering wheel and in the front passenger's panel above the glove box. When the SRSCM detects a sufficiently severe impact to the front of the vehicle, it will automatically deploy the front air bags.

Upon deployment, tear seams molded directly into the pad covers will separate under pressure from the expansion of the air bags. Further opening of the covers then allows full inflation of the air bags.
A fully inflated air bag, in combination with a properly worn seat belt, slows the driver's or the passenger's forward motion, reducing the risk of head and chest injury.

After complete inflation, the air bag immediately starts deflating, enabling the driver to maintain forward visibility and the ability to steer or operate other controls.

**WARNING**

- Do not install or place any accessories (drink holder, cassette holder, sticker, etc.) on the front passenger's panel above the glove box in a vehicle with a passenger's air bag. Such objects may become dangerous projectiles and cause injury if the passenger's air bag inflates.

(Continued)

- When installing a container of liquid air freshener inside the vehicle, do not place it near the instrument cluster nor on the instrument panel surface. It may become a dangerous projectile and cause injury if the passenger's air bag inflates.

- If an air bag deploys, there may be a loud noise followed by a fine dust released in the vehicle. These conditions are normal and are not hazardous - the air bags are packed in this fine powder. The dust generated during air bag deployment may cause skin or eye irritation as well as aggravate asthma for some persons. Always wash all exposed skin areas thoroughly with cold water and mild soap after an accident in which the air bags were deployed.
The SRS can function only when the ignition key is in the ON position. If the SRS air bag warning light does not illuminate, or continuously remains on after illuminating for about 6 seconds when the ignition key is turned to the ON position, or after the engine is started, comes on while driving, the SRS is not working properly. In this case, have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Before you replace a fuse or disconnect a battery terminal, turn the ignition switch to the LOCK position and remove the ignition key. Never remove or replace the air bag related fuse(s) when the ignition switch is in the ON position. Failure to heed this warning will cause the SRS air bag warning light to illuminate.

Your vehicle is equipped with a Supplemental Restraint (Air Bag) System and lap/shoulder belts at both the driver and passenger seating positions. The indicators of the system's presence are the letters "AIR BAG" embossed on the air bag pad cover on the steering wheel and the passenger's side front panel pad above the glove box.

The SRS consists of air bags installed under the pad covers in the center of the steering wheel and the passenger's side in the front panel above the glove box.

The purpose of the SRS is to provide the vehicle's driver and/or the front passenger with additional protection than that offered by the seat belt system alone in case of a frontal impact of sufficient severity.

**WARNING**

Always use seat belts and child restraints – every trip, every time, everyone! Air bags inflate with considerable force and in the blink of an eye. Seat belts help keep occupants
in proper position to obtain maximum benefit from the air bag. Even with air bags, improperly and unbelled occupants can be severely in-
jured when the air bag inflates. Always follow the precautions about seat belts, air bags and occupant safety contained in this manual.
To reduce the chance of serious or fatal injuries and receive the maximum safety benefit from your restraint system:
• Never place a child in any child or booster seat in the front seat.
• ABC – Always Buckle Children in the back seat. It is the safest place for children of any age to ride.
• Front and side air bags can injure occupants improperly positioned in the front seats.
• Move your seat as far back as practical from the front air bags, while still maintaining control of the vehicle.

You and your passengers should never sit or lean unnecessarily close to the air bags. Improperly positioned drivers and passengers can be severely injured by inflating air bags.
• Never lean against the door or center console – always sit in an upright position.
• Do not allow a passenger to ride in the front seat when the passenger’s front air bag OFF indicator is illuminated, because the air bag will not deploy in the event of a moderate or severe frontal crash.
• No objects should be placed over or near the air bag modules on the steering wheel, instrument panel or the front passenger’s panel above the glove box, because any such object could cause harm if the vehicle is in a crash severe enough to cause the air bags to deploy.

Do not tamper with or disconnect SRS wiring or other components of the SRS system. Doing so could result in injury, due to accidental deployment of the air bags or by rendering the SRS inoperative.
• If the SRS air bag warning light remains illuminated while the vehicle is being driven, have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service part-
ner.
• Air bags can only be used once – have the system replaced by a professional workshop.
Kia recommends to visit an au-
thorized Kia dealer/service part-
ner.
• The SRS is designed to deploy the front air bags only when an impact is sufficiently severe and when the impact angle is less than 30° from the forward longitudinal axis of the vehicle. Additionally, the air bags will only deploy once. Seat belts must be worn at all times.
Safety features of your vehicle

(Continued)

• Front air bags are not intended to deploy in side-impact, rear-impact or rollover crashes. In addition, front air bags will not deploy in frontal crashes below the deployment threshold.

• A child restraint system must never be placed in the front seat. The infant or child could be severely injured or killed by an air bag deployment in case of an accident.

• Children age 12 and under must always be properly restrained in the rear seat. Never allow children to ride in the front passenger seat. If a child over 12 must be seated in the front seat, he or she must be properly belted and the seat should be moved as far back as possible.

(Continued)

• For maximum safety protection in all types of crashes, all occupants including the driver should always wear their seat belts whether or not an air bag is also provided at their seating position to minimize the risk of severe injury or death in the event of a crash. Do not sit or lean unnecessarily close to the air bag while the vehicle is in motion.

• Sitting improperly or out of position can result in serious or fatal injury in a crash. All occupants should sit upright with the seat back in an upright position, centered on the seat cushion with their seat belt on, legs comfortably extended and their feet on the floor until the vehicle is parked and the ignition key is removed.

• The SRS air bag system must deploy very rapidly to provide protection in a crash. If an occupant is out of position because of not wearing a seat belt, the air bag may forcefully contact the occupant causing serious or fatal injuries.

Passenger’s front air bag ON/OFF switch (if equipped)

The passenger’s front air bag can be deactivated by the passenger’s front air bag ON/OFF switch if a child restraint is installed on the front passenger’s seat or if the front passenger’s seat is unoccupied by a person. To ensure the safety of your child, the passenger’s front air bag must be deactivated when it should be necessary to install a rearward facing child seat on the front passenger seat in exceptional circumstances.
To deactivate or reactivate the passenger’s front air bag:

To deactivate the passenger’s front air bag, insert the master key into the passenger’s front air bag ON/OFF switch and turn it to the OFF position. The passenger’s front air bag OFF indicator will illuminate and stay on until the passenger’s front air bag is reactivated.

To reactivate the passenger’s front air bag, insert the master key into the passenger’s front air bag ON/OFF switch and turn it to the ON position. The passenger’s front air bag OFF indicator will go out.

**NOTICE**

- When the passenger’s front air bag ON/OFF switch is set to the ON position, the passenger’s front air bag is activated and child or infant seat should not be installed on the front passenger seat.

- When the passenger’s front air bag ON/OFF switch is set to the OFF position, the passenger’s front air bag is deactivated.

**WARNING**

The front air bag ON/OFF switch could turn by using a similar small rigid device. Always check the status of the front air bag ON/OFF switch and passenger’s front air bag OFF indicator.
CAUTION

• If the passenger’s front air bag ON/OFF switch is not working properly, the air bag warning light ( )); on the instrument panel will illuminate. And, the passenger’s front air bag OFF indicator ( )); will not illuminate (The passenger’s front air bag ON indicator comes on and goes off after approximately 60 seconds), the SRS Control Module reactivates the passenger’s front air bag and the passenger’s front air bag will inflate in frontal impact crashes even if the passenger’s front air bag ON/OFF switch is set to the OFF position.

• Air bags can only be used once – have the system replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

WARNING

• The driver is responsible for the proper position of the passenger’s front air bag ON/OFF switch.

• Deactivate the passenger’s front air bag only when the ignition switch is switched off, or the malfunction may occur in the SRS Control Module. And there may be a danger that the driver’s and/or front passenger’s and/or side and curtain air bag may fail to trigger, or not trigger correctly during a collision.

(Continued)

• If the SRS air bag warning light blinks or does not illuminate when the ignition switch is turned to the ON position, or if it illuminates while the vehicle is being driven, have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

(Continued)

• Never install a rearward facing child seat on the front passenger’s seat unless the passenger's front air bag has been deactivated. The infant or child could be severely injured or killed by an air bag deployment in case of an accident.

• Even though your vehicle is equipped with the passenger’s front air bag ON/OFF switch, do not install a child restraint system in the front passenger’s seat. A child restraint system must never be placed in the front seat. Children who are too large for child restraint systems should always occupy the rear seat and use the available lap/shoulder belts. Children are afforded the most safety in the event of an accident when they are restrained by a proper restraint system in the rear seat.

• As soon as the child seat is no longer needed on the front passenger’s seat, reactivate the front passenger’s air bag.

(Continued)
Side air bag (if equipped)

The actual air bags in the vehicle may differ from the illustration.

Your vehicle is equipped with a side air bag in each front seat. The purpose of the air bag is to provide the vehicle's driver and/or the front passenger with additional protection than that offered by the seat belt alone.

The side air bags are designed to deploy only during certain side impact collisions, depending on the crash severity of impact.

However, when side deployment threshold is satisfied at front-impact, side air bags may deploy. The side air bags are not designed to deploy in all side impact or rollover situations. The side air bags may deploy on the side of the impact or on both side.

* NOTICE

- if equipped with rollover sensor
  - Also, both side of the side air bags deploy in certain rollover situations.
  - The side air bag may deploy when the rollover sensor detects the situation as a rollover.

**WARNING**

- No attaching objects

No objects (such as crash pad cover, cellular phone holder, cup holder, perfume or stickers) should be placed over or near the air bag modules on the steering wheel, instrument panel, windshield glass, and the front passenger’s panel above the glove box. Such objects could cause harm if the vehicle is in a crash severe enough to cause the air bags to deploy. Do not place any objects over the air bag or between the air bag and yourself.

(Continued)

- Never place or insert any object into any small opening near side air bag labels attached to the vehicle seats. When the air bag deploys, the object may affect the deployment and result in unexpected accident or bodily harm.
**WARNING**

Do not allow the passengers to lean their heads or bodies onto doors, put their arms on the doors, stretch their arms out of the window, or place objects between the doors and passengers when they are seated on seats equipped with side and/or curtain air bags.

**WARNING**

- The side air bag is supplemental to the driver’s and the passenger’s seat belt systems and is not a substitute for them. Therefore your seat belts must be worn at all times while the vehicle is in motion. The air bags deploy only in certain side impact or rollover*1 conditions severe enough to cause significant injury to the vehicle occupants.

(Continued)

- For best protection from the side air bag system and to avoid being injured by the deploying side air bag, both front seat occupants should sit in an upright position with the seat belt properly fastened. The driver’s hands should be placed on the steering wheel at the 9:00 and 3:00 positions. The passenger’s arms and hands should be placed on their laps.
- Do not use any accessory seat covers.
- Use of seat covers could reduce or prevent the effectiveness of the system.
- To prevent unexpected deployment of the side air bag that may result in personal injury, avoid impact to the side impact sensor when the ignition switch is on.
- If the seat or seat cover is damaged, have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

(Continued)

- No attaching objects
- Do not place any objects over the air bag or between the air bag and yourself. Also, do not attach any objects around the area the air bag inflates such as the door, side door glass, front and rear pillar.
- Do not place any objects between the door and the seat. They may become dangerous projectiles if the side air bag inflates.
- Do not install any accessories on the side or near the side air bags.

*1 Only vehicle equipped with rollover sensor.
Curtain air bag (if equipped)

Curtain air bags are located along both sides of the roof rails above the front and rear doors. They are designed to help protect the heads of the front seat occupants and the rear outboard seat occupants in certain side impact collisions. The curtain air bags are designed to deploy during certain side impact collisions, depending on the crash severity of impact. However, when side deployment threshold is satisfied at front-impact, side air bags may deploy. The curtain air bags may deploy on the side of the impact or on both sides. The curtain air bags are not designed to deploy in all side impacts or rollover situations.

*NOTICE*

- if equipped with rollover sensor
  - Also, both sides of the curtain air bags deploy in certain rollover situations.

(Continued)

* WARNING *

- Do not hang heavy items on the coat hooks for safety reasons.
- In order for side and curtain air bags to provide the best protection, front seat occupants and outboard rear occupants should sit in an upright position with the seat belts properly fastened. Importantly, children should sit in a proper child restraint system in the rear seat.
- When children are seated in the rear outboard seats, they must be seated in the proper child restraint system. Make sure to position the child restraint system as far away from the door side as possible, and secure the child restraint system in a locked position.
Failure to follow the above instructions can result in injury or death to the vehicle occupants in an accident.

**WARNING**

- **No attaching objects**
  - Do not place any objects over the air bag. Also, do not attach any objects around the area the air bag inflates such as the door, side door glass, front and rear pillar, roof side rail.
  - Do not hang hard or breakable objects on the clothes hanger.
Air bag collision sensors

Why didn’t my air bag go off in a collision? (Inflation and non-inflation conditions of the air bag)
There are many types of accidents in which the air bag would not be expected to provide additional protection. These include rear impacts, second or third collisions in multiple impact accidents, as well as low speed impacts.
1. SRS control module / Rollover sensor (if equipped)
2. Front impact sensor
3. Side impact sensor (if equipped)

WARNING
• Do not hit or allow any objects to impact the locations where air bag or sensors are installed. This may cause unexpected air bag deployment, which could result in serious personal injury or death.
(Continued)
(Continued)
• If the installation location or angle of the sensors is altered in any way, the air bags may deploy when they should not or they may not deploy when they should, causing severe injury or death. Therefore, do not try to perform maintenance on or around the air bag sensors. Have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
• Problems may arise if the sensor installation angles are changed due to the deformation of the front bumper, body, B pillar or front door and C pillars where side collision sensors are installed. In this case, have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

(Continued)
• Your vehicle has been designed to absorb impact and deploy the air bag(s) in certain collisions. Installing bumper guards or replacing a bumper with non-genuine parts may adversely affect your vehicle's collision and air bag deployment performance.

**WARNING**

- If equipped with rollover sensor
If your vehicle is equipped with side and curtain air bag, set the ignition switch to OFF or ACC position when the vehicle is being towed. The side and curtain air bag may deploy when the ignitions is ON, and the rollover sensor detects the situation as a rollover.

---

**Air bag inflation conditions**

Front air bags
Front air bags are designed to inflate in a frontal collision depending on the severity of impact of the front collision.
The actual air bags in the vehicle may differ from the illustration.

Side air bags (if equipped)
Side air bags (side and/or curtain air bags) are designed to inflate when an impact is detected by side collision sensors depending on the severity of impact resulting from a side impact collision. Although the front air bags (driver’s and front passenger’s air bags) are designed to inflate only in frontal collisions, they also may inflate in other types of collisions if the front impact sensors detect a sufficient impact. Side air bags (side and/or curtain air bags) are designed to inflate only in side impact collisions, but they may inflate in other collisions if the side impact sensors detect a sufficient impact.

If the vehicle chassis is impacted by bumps or objects on unimproved roads or sidewalks, air bags may deploy. Drive carefully on unimproved roads or on surfaces not designed for vehicle traffic to prevent unintended air bag deployment.

• In certain low-speed collisions the air bags may not deploy. The air bags are designed not to deploy in such cases because they may not provide benefits beyond the protection of the seat belts in such collisions.

NOTICE

If equipped with rollover sensor
Also, the side and curtain air bags are designed to inflate when a rollover is detected by a rollover sensor.

Air bag non-inflation conditions

• In certain low-speed collisions the air bags may not deploy. The air bags are designed not to deploy in such cases because they may not provide benefits beyond the protection of the seat belts in such collisions.
Frontal air bags are not designed to inflate in rear collisions, because occupants are moved backward by the force of the impact. In this case, inflated air bags would not be able to provide any additional benefit.

Front air bags may not inflate in side impact collisions, because occupants move to the direction of the collision, and thus in side impacts, frontal air bag deployment would not provide additional occupant protection. However, side or curtain air bags may inflate depending on the severity of impact.

In a slant or angled collision, the force of impact may direct the occupants in a direction where the air bags would not be able to provide any additional benefit, and thus the sensors may not deploy any air bags.
• Just before impact, drivers often brake heavily. Such heavy braking lowers the front portion of the vehicle causing it to "ride" under a vehicle with a higher ground clearance. Air bags may not inflate in this "under-ride" situation because deceleration forces that are detected by sensors may be significantly reduced by such "under-ride" collisions.

• Front air bags may not inflate in rollover accidents because front air bag deployment would not provide additional occupant protection.

**NOTICE**

- Without rollover sensor

However, side and/or curtain air bags may inflate when the vehicle is rolled over by a side impact collision, if the vehicle is equipped with side air bags and curtain air bags.

**NOTICE**

- If equipped with rollover sensor

However, if equipped with side and curtain air bags, the air bags may inflate in a rollover, when it is detected by the rollover sensor.

• Air bags may not inflate if the vehicle collides with objects such as utility poles or trees, where the point of impact is concentrated and the collision energy is absorbed by the vehicle structure.
SRS care
The SRS is virtually maintenance-free and so there are no parts you can safely service by yourself. If the SRS air bag warning light does not illuminate, or continuously remains on, have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**WARNING**

- Modification to SRS components or wiring, including the addition of any kind of badges to the pad covers or modifications to the body structure, can adversely affect SRS performance and lead to possible injury.
- For cleaning the air bag pad covers, use only a soft, dry cloth or one which has been moistened with plain water. Solvents or cleaners could adversely affect the air bag covers and proper deployment of the system.

(Continued)

- No objects should be placed over or near the air bag modules on the steering wheel, instrument panel, and the front passenger’s panel above the glove box, because any such object could cause harm if the vehicle is in a crash severe enough to cause the air bags to inflate.
- If the air bags inflate, have the system replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
- Do not tamper with or disconnect SRS wiring, or other components of the SRS system. Doing so could result in injury, due to accidental inflation of the air bags or by rendering the SRS inoperative.

(Continued)

- If components of the air bag system must be discarded, or if the vehicle must be scrapped, certain safety precautions must be observed. An authorized Kia dealer knows these precautions and can give you the necessary information. Failure to follow these precautions and procedures could increase the risk of personal injury.
- If your car was flooded and has soaked carpeting or water on flooring, you shouldn’t try to start the engine; in this case, have your vehicle inspected by a professional workshop. Kia recommends to contact an authorized Kia dealer/service partner.

Additional safety precautions
- Never let passengers ride in the cargo area or on top of a folded-down back seat. All occupants should sit upright, fully back in their seats with their seat belts on and their feet on the floor.
• Passengers should not move out of or change seats while the vehicle is moving. A passenger who is not wearing a seat belt during a crash or emergency stop can be thrown against the inside of the vehicle, against other occupants, or out of the vehicle.

• Each seat belt is designed to restrain one occupant. If more than one person uses the same seat belt, they could be seriously injured or killed in a collision.

• Do not use any accessories on seat belts. Devices claiming to improve occupant comfort or reposition the seat belt can reduce the protection provided by the seat belt and increase the chance of serious injury in a crash.

• Passengers should not place hard or sharp objects between themselves and the air bags. Carrying hard or sharp objects on your lap or in your mouth can result in injuries if an air bag inflates.

• Keep occupants away from the air bag covers. All occupants should sit upright, fully back in their seats with their seat belts on and their feet on the floor. If occupants are too close to the air bag covers, they could be injured if the air bags inflate.

• Do not attach or place objects on or near the air bag covers. Any object attached to or placed on the front or side air bag covers could interfere with the proper operation of the air bags.

• Do not modify the front seats. Modification of the front seats could interfere with the operation of the supplemental restraint system sensing components or side air bags.

• Do not place items under the front seats. Placing items under the front seats could interfere with the operation of the supplemental restraint system sensing components and wiring harnesses.

• Never hold an infant or child on your lap. The infant or child could be seriously injured or killed in the event of a crash. All infants and children should be properly restrained in appropriate child safety seats or seat belts in the rear seat.

![WARNING](image)

- Sitting improperly or out of position can cause occupants to be shifted too close to a deploying air bag, strike the interior structure or be thrown from the vehicle resulting in serious injury or death.
- Always sit upright with the seatback in an upright position, centered on the seat cushion with your seat belt on, legs comfortably extended and your feet on the floor.

**Adding equipment to or modifying your air bag-equipped vehicle**

If you modify your vehicle by changing your vehicle’s frame, bumper system, front end or side sheet metal or ride height, this may affect the operation of your vehicle’s air bag system.
Air bag warning labels are attached to alert the passengers of the potential risk of the air bag system.

Note that these government warnings focus on the risk of children. We also want you to be aware of the risks which adults are exposed to that have been described in previous pages.

KEYS

Record your key number

The key code number is stamped on the key code tag attached to the key set.

Should you lose your keys, Kia recommends to contact an authorized Kia dealer/service partner. Remove the key code tag and store it in a safe place. Also, record the key number and keep it in a safe and handy place, but not in the vehicle.

Key operations

- **Type A**
  - Used to start the engine.
  - Used to lock and unlock the doors.
  - Used to lock and unlock the glove box. (if equipped)

- **Type B**
  - To unfold the key, press the release button then the key will unfold automatically.
  - To fold the key, fold the key manually while pressing the release button.

- **Type C**
**CAUTION**
Do not fold the key without pressing the release button. This may damage the key.

**Type C**
To remove the mechanical key, press and hold the release button and remove the mechanical key. To reinstall the mechanical key, put the key into the hole and push it until a click sound is heard.

**WARNING**
Kia recommends to use parts for replacement from an authorized Kia dealer/service partner. If an aftermarket key is used, the ignition switch may not return to ON after START. If this happens, the starter will continue to operate causing damage to the starter motor and possible fire due to excessive current in the wiring.

**WARNING**
- **Ignition key (smart key)**
Leaving children unattended in a vehicle with the ignition key (smart key) is dangerous even if the key is not in the ignition switch or start button is ACC or ON position. Children copy adults and they could place the key in the ignition switch or press the start button. The ignition key (smart key) would enable children to operate power windows or other controls, or even make the vehicle move, which could result in serious bodily injury or even death. Never leave the keys in your vehicle with unsupervised children, when the engine is running.

**Immobilizer system**
Your vehicle may be equipped with an electronic engine immobilizer system to reduce the risk of unauthorized vehicle use. Your immobilizer system is comprised of a small transponder in the key and electronic devices inside the vehicle.

**Vehicles without smart key system**
With the immobilizer system, whenever you insert your ignition key into the ignition switch and turn it to ON, it checks and determines and verifies if the ignition key is valid or not. If the key is valid, the engine will start.
If the key is invalid, the engine will not start.

To deactivate the immobilizer system:
Insert the ignition key into the key cylinder and turn it to the ON position.

To activate the immobilizer system:
Turn the ignition key to the OFF position. The immobilizer system activates automatically. Without a valid ignition key for your vehicle, the engine will not start.

Vehicles with smart key system
Whenever the engine start/stop buttons are changed to the ON position, the immobilizer system checks and verifies if the key is valid or not. If the key is valid, the engine will start. If the key is invalid, the engine will not start.

To deactivate the immobilizer system
Change the engine start/stop button to the ON position.

To activate the immobilizer system
Change the engine start/stop button to the OFF position. The immobilizer system activates automatically. Without a valid smart key for your vehicle, the engine will not start.

⚠️ WARNING
In order to prevent theft of your vehicle, do not leave spare keys anywhere in your vehicle. Your immobilizer password is a customer unique password and should be kept confidential. Do not leave this number anywhere in your vehicle.

⚠️ NOTICE
When starting the engine, do not use the key with other immobilizer keys around. Otherwise the engine may not start or may stop soon after it starts. Keep each key separately in order to avoid a starting malfunction.

⚠️ CAUTION
Do not put metal accessories near the ignition switch. Metal accessories may interrupt the transponder signal and may prevent the engine from being started.

⚠️ CAUTION
The transponder in your ignition key is an important part of the immobilizer system. It is designed to give years of trouble-free service, however you should avoid exposure to moisture, static electricity and rough handling. Immobilizer system malfunction could occur.

⚠️ CAUTION
Do not change, alter or adjust the immobilizer system because it could cause the immobilizer system to malfunction. In this case, have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
(Continued)
an authorized Kia dealer/service
partner. Malfunctions caused by improper al-
terations, adjustments or modifica-
tions to the immobilizer system are
not covered by your vehicle manu-
facturer warranty.
REMOTE KEYLESS ENTRY (IF EQUIPPED)

Remote keyless entry system operations

**Lock (1)**
All doors (and trunk or tailgate) are locked if the lock button is pressed. If all doors (and trunk or tailgate) are closed, the hazard warning lights will blink once to indicate that all doors (and trunk or tailgate) are locked. Also, the outside rearview mirror will automatically fold when the outside rearview mirror folding switch is in the AUTO position (if equipped).

**Unlock (2)**
All doors are unlocked if the unlock button is pressed. The hazard warning lights will blink twice to indicate that all doors are unlocked. Also, the outside rearview mirror will automatically unfold when the outside rearview mirror folding switch is in the AUTO position (if equipped). However, after pressing this button, the doors will lock automatically unless you open any door within 30 seconds.

**Trunk (tailgate) unlock (3)**
The trunk (tailgate) is unlocked if the button is pressed for more than 1 second.

The hazard warning lights will blink twice to indicate that the trunk (tailgate) is unlocked. Also, once the trunk (tailgate) is opened and then closed, the trunk (tailgate) will lock automatically.

**Transmitter precautions**
The transmitter will not work if any of the following occurs:
- The ignition key is in the ignition switch.
- You exceed the operating distance limit (about 10 m [30 feet]).
- The battery in the transmitter is weak.
- Other vehicles or objects may be blocking the signal.
- The weather is extremely cold.
- The transmitter is close to a radio transmitter such as a radio station or an airport which can interfere with normal operation of the transmitter. When the transmitter does not work correctly, open and close the door with the ignition key. If you have a problem with the transmitter Kia recommends to contact an authorized Kia dealer/service partner.
• If the transmitter is in close proximity to your cell phone or smart phone, the signal from the transmitter could be blocked by normal operation of your cell phone or smart phone. This is especially important when the phone is active such as making call, receiving calls, text messaging, and/or sending/receiving emails. Avoid placing the transmitter and your cell phone or smart phone in the same pants or jacket pocket and maintain adequate distance between the two devices.

⚠️ CAUTION

Keep the transmitter away from water or any liquid. If the keyless entry system is inoperative due to exposure to water or other liquids, it will not be covered by your manufacturer’s vehicle warranty.

⚠️ CAUTION

Keep the transmitter away from electromagnetic materials that

(Continued)

blocks electromagnetic waves to the key surface.

⚠️ CAUTION

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment. If the keyless entry system is inoperative due to changes or modifications not expressly approved by the party responsible for compliance, it will not be covered by your manufacturer’s vehicle warranty.

Battery replacement

A transmitter uses a 3 volt lithium battery which will normally last for several years. When replacement is necessary, use the following procedure.

1. Insert a slim tool into the slot and gently pry open the transmitter center cover.

2. Replace the battery with a new battery (CR2032). When replacing the battery, make sure the battery position.

3. Install the battery in the reverse order of removal.
For transmitter replacement, Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ **CAUTION**

- The keyless entry system transmitter is designed to give you years of trouble-free use, however it can malfunction if exposed to moisture or static electricity. If you are unsure how to use or replace the battery, Kia recommends to contact an authorized Kia dealer/service partner.
- Using the wrong battery can cause the transmitter to malfunction. Be sure to use the correct battery.
- To avoid damaging the transmitter, don't drop it, get it wet, or expose it to heat or sunlight.

⚠️ **CAUTION**

An inappropriately disposed battery can be harmful to the environment and human health. Dispose the battery according to your local law(s) or regulation.
SMART KEY (IF EQUIPPED)

With a smart key, you can lock or unlock a door (and trunk or tailgate) and even start the engine without inserting the key. The functions of buttons on a smart key are similar to the remote keyless entry. (Refer to “Remote keyless entry” on page 4-08.)

Smart key functions
Carrying the smart key, you may lock and unlock the vehicle doors (and trunk or tailgate). Also, you may start the engine. Refer to the following, for more details.

- The smart key is in the vehicle.
- The ENGINE START/STOP button is in the ACC or ON position.
- Any door except the trunk (tailgate) is opened.

Unlocking
Pressing the button of the front outside door handles with all doors (and trunk or tailgate) closed and locked, unlocks all the doors (and trunk or tailgate). The hazard warning lights will blink twice to indicate that all doors (and trunk or tailgate) are unlocked. The button will only operate when the smart key is within 0.7 m (28 in.) from the outside door handle. When the smart key is recognized in the area of 0.7 m (28 in.) from the front outside door handle, other people can also open a door without possession of the smart key.

Trunk (tailgate) unlocking
If you are within 0.7 m (28 in.) from the outside trunk (tailgate) handle, with your smart key in possession, the trunk (tailgate) will unlock and open when you press the trunk (tailgate) handle switch.
The hazard warning lights will blink twice to indicate that the trunk (tailgate) is unlocked.
Also, once the trunk (tailgate) is opened and then closed, the trunk (tailgate) will lock automatically.

**Start-up**
You can start the engine without inserting the key. For detailed information refer to “Starting the engine with a smart key” on page 6-07.

### Smart key precautions

![NOTICE]

- If, for some reason, you happen to lose your smart key, you will not be able to start the engine. Tow the vehicle, if necessary, Kia recommends to contact an authorized Kia dealer/service partner.
- A maximum of 2 smart keys can be registered to a single vehicle. If you lose a smart key, Kia recommends to contact an authorized Kia dealer/service partner.

(Continued)

- The smart key will not work if any of the following occurs:
  - The smart key is close to a radio transmitter such as a radio station or an airport which can interfere with normal operation of the smart key.
  - The smart key is near a mobile two-way radio system or a cellular phone.
  - Another vehicle’s smart key is being operated close to your vehicle.
When the smart key does not work properly, open and close the door with the mechanical key. If you have a problem with the smart key, Kia recommends to contact an authorized Kia dealer/service partner.

(Continued)

- If the smart key is in close proximity to your cell phone or smart phone, the signal from the smart key could be blocked by normal operation of your cell phone or smart phone. This is especially important when the phone is active such as making call, receiving calls, text messaging, and/or sending/receiving emails. Avoid placing the smart key and your cell phone or smart phone in the same pants or jacket pocket and maintain adequate distance between the two devices.

![CAUTION]

Keep the smart key away from water or any liquid. If the keyless entry system is inoperative due to exposure to water or liquids, it will not be covered by your manufacturer’s vehicle warranty.
**CAUTION**

Keep the smart key away from electromagnetic materials that blocks electromagnetic waves to the key surface.

**Battery replacement**

A smart key battery should last for several years, but if the smart key is not working properly, try replacing the battery with a new one. If you are unsure how to use or replace the battery, Kia recommends to contact an authorized Kia dealer/service partner.

**NOTICE**

The circuit inside the smart key can have a problem if exposed to moisture or static electricity.

1. Open the rear cover of the smart key.
2. Replace the battery with a new battery (CR2032). When replacing the battery, make sure the battery position.
3. Install the battery in the reverse order of removal.

**NOTICE**

- Using the wrong battery can cause the smart key to malfunction. Be sure to use the correct battery.
- Circuits inside the smart key may develop problems when dropped, exposed to moisture or static electricity.

(Continued)

(Continued)

- If you suspect that your smart key might have sustained some damage, or you feel your transmitter or smart key is not working correctly Kia recommends to contact an authorized Kia dealer/service partner.

**CAUTION**

An inappropriately disposed battery can be harmful to the environment and human health. Dispose the battery according to your local law(s) or regulation.
THEFT-ALARM SYSTEM (IF EQUIPPED)

Vehicles equipped with a theft alarm system will have a label attached to the vehicle with the following words:
1. WARNING
2. SECURITY SYSTEM

This system is designed to provide protection from unauthorized entry into the car. This system is operated in three stages: the first is the "Armed" stage, the second is the "Theft-alarm" stage, and the third is the "Disarmed" stage. If triggered, the system provides an audible alarm with blinking of the hazard warning lights.

**Armed stage**

**Using the smart key**
Park the vehicle and stop the engine. Arm the system as described below.
1. Turn off the engine.
2. Make sure that all doors, the engine hood and trunk lid (tailgate) are closed and latched.
3. • Lock the doors by pressing the button of the front outside door handle with the smart key in your possession. After completion of the steps above, the hazard warning lights operate once to indicate that the system is armed.
   If any door remains open, the doors won't lock and the chime will sound for 3 seconds. Close the door and try again to lock the doors.
   If trunk lid (tailgate) or engine hood remains open, the hazard warning lights won't operate and theft-alarm will not arm. After this, trunk lid (tailgate) and engine hood are closed, the hazard warning lights blink once.
• Lock the doors by pressing the lock button on the smart key. After completion of the steps above, the hazard warning lights will operate once to indicate that the system is armed.
If any door, trunk lid (tailgate) or engine hood remains open, the hazard warning lights won’t operate and theft-alarm will not arm. After this, if all doors, trunk lid (tailgate) and engine hood are closed, the hazard warning lights blink once.

3. Lock the doors by pressing the lock button on the transmitter. After completion of the steps above, the hazard warning lights will blink once to indicate that the system is armed.
If any door, trunk lid (tailgate) or engine hood remains open, the hazard warning lights won’t operate and theft-alarm will not arm. After this, if all doors, trunk lid (tailgate) and engine hood are closed, the hazard warning lights blink once.

Do not arm the system until all passengers have left the vehicle. If the system is armed while a passenger(s) remains in the vehicle, the alarm may be activated when the remaining passenger(s) leave the vehicle. If any door, trunk (tailgate) or engine hood is opened within 30 seconds after the system enters the armed stage, the system is disarmed to prevent unnecessary alarm.

The trunk is opened without using the transmitter (or smart key).
• The engine hood is opened.

The hazard warning lights will blink continuously for 27 seconds, unless the system is disarmed. To turn off the system, unlock the doors with the transmitter (or smart key).

**NOTICE**

**Immobilizer system**
• If the system is not disarmed with the transmitter, insert the key into the ignition switch and start the engine. Then the system will be disarmed.
• If you lose your keys, Kia recommends to visit an authorized Kia dealer/service partner.

**Using the transmitter**
Park the vehicle and stop the engine.
Arm the system as described below.
1. Turn off the engine and remove the ignition key from the ignition switch.
2. Make sure that all doors, the engine hood and trunk lid (tailgate) are closed and latched.

**Theft-alarm stage**
The alarm will be activated if any of the following occurs while the system is armed.
• A front or rear door is opened without using the transmitter (or smart key).
Opening the trunk (tailgate) with the alarm armed (if equipped)
When the alarm is armed, the alarm will not sound if the trunk lid (tailgate) is opened with the transmitter (or the smart key).
Once the trunk (tailgate) is opened and then closed, the trunk (tailgate) will be locked automatically and the system will be armed again.
Also, if any of the doors or hood is opened while the trunk lid (tailgate) open and the alarm armed, the alarm will sound.

Disarmed stage
The system will be disarmed when:

Transmitter
- The door unlock button is pressed.

Smart key
- The door unlock button is pressed.
- The button of the front outside door is pressed while carrying the smart key.

After the doors are unlocked, the hazard warning lights will blink twice to indicate that the system is disarmed.

After pressing the unlock button, if any door or trunk (tailgate) is not opened within 30 seconds, the system will be rearmed.

⚠️ CAUTION

Do not change, alter or adjust the theft-alarm system because it could cause the theft-alarm system to malfunction have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner. Malfunctions caused by improper alterations, adjustments or modifications to the theft-alarm system are not covered by your vehicle manufacturer’s warranty.
DOOR LOCKS

Operating door locks from outside the vehicle

- Turn the key toward the rear of the vehicle to unlock and toward the front of the vehicle to lock.
- If you lock/unlock the driver’s door with a key, all vehicle doors will lock/unlock automatically (if equipped).
- Doors can also be locked and unlocked with the transmitter (or smart key) (if equipped).
- Once the doors are unlocked, they may be opened by pulling the door handle.

- When closing the door, push the door by hand. Make sure the doors are closed securely.

* NOTICE

- In cold and wet climates, door lock and door mechanisms may not work properly due to freezing conditions.
- If the door is locked/unlocked multiple times in rapid succession with either the vehicle key or door lock switch, the system may stop operating temporarily in order to protect the circuit and prevent damage to system components.

⚠️ WARNING

If people must spend a longer time in the vehicle while it is very hot or cold outside, there is risk of injuries or danger to life. Do not lock the vehicle from the outside when there are people in it.

⚠️ CAUTION

Do not frequently repeat opening and closing of doors, or apply excessive force to a door while the door closer is operating.

⚠️ WARNING

- If you don’t close the door securely, the door may open again.
- Be careful that someone’s body and hands are not trapped when closing the door.
Operating door locks from inside the vehicle

With the door lock button

• To unlock a door, pull the door lock button (1) to the “Unlock” position. The red mark (2) on the button will be visible.

• To lock a door, push the door lock button (1) to the “Lock” position. If the door is locked properly, the red mark (2) on the door lock button will not be visible.

• To open a door, pull the door handle (3) outward.

• If the inner door handle of the driver’s (or front passenger’s) door is pulled when the door lock button is in the lock position, the button will unlock and the door will open. (if equipped)

• Front door cannot be locked if the ignition key is in the ignition switch (or if the smart key is in the vehicle) and the front door is opened.

⚠️ WARNING
Do not pull the inner door handle of driver’s (or passenger’s) door while the vehicle is moving.

⚠️ WARNING
If a power door lock ever fails to function while you are in the vehicle, try one or more of the following techniques to exit:

• Operate the door unlock feature repeatedly (both electronic and manual) while simultaneously pulling on the door handle.
• Operate the other door locks and handles, front and rear.
• Lower a front window and use the key to unlock the door from outside.
**With central door lock switch**

- When pressing the front portion (1) of the switch, all vehicle doors will lock.
- When pressing the rear portion (2) of the switch, all vehicle doors will unlock.
- If the key is in the ignition switch (or if the smart key is in the vehicle) and any door is opened, the doors will not lock even though the front portion (1) of the central door lock switch is pressed.

**WARNING**

**Doors**

- The doors should always be fully closed and locked while the vehicle is in motion to prevent accidental opening of the door. Locked doors will also discourage potential intruders when the vehicle stops or slows down.

(Continued)

(Continued)

- Be careful when opening doors and watch for vehicles, motorcycles, bicycles or pedestrians approaching the vehicle in the path of the door. Opening a door when something is approaching can cause damage or injury.

**WARNING**

**Unlocked vehicles**

Leaving your vehicle unlocked can invite theft or possible harm to you or others from someone hiding in your vehicle while you are gone. Always remove the ignition key, engage the parking brake, close all windows and lock all doors when leaving your vehicle unattended.

**WARNING**

**Unattended children**

(Continued)
(Continued)
An enclosed vehicle can become extremely hot, causing death or severe injury to unattended children or animals who cannot escape the vehicle. Furthermore, children might operate features of the vehicle that could injure them, or they could encounter other harm, possibly from someone gaining entry to the vehicle. Never leave children or animals unattended in your vehicle.

Door lock/unlock features

**Impact sensing door unlock system (if equipped)**
All doors will automatically unlock when an impact causes the air bags to deploy.

**Speed sensing door lock system (if equipped)**
All doors will automatically lock after the vehicle speed exceeds 15 km/h. You can activate or deactivate the auto door lock/unlock features in the vehicle. Refer to “User Setting Mode” on page 4-72.

---

**Child-protector rear door lock (4 Door, 5 Door)**

The child safety lock is provided to help prevent children from accidentally opening the rear doors from inside the vehicle. The rear door safety locks should be used whenever children are in the vehicle.

1. Open the rear door.
2. Insert a key (or screwdriver) into the hole (1) and turn it to the lock position. When the child safety lock is in the lock position, the rear door will not open even though the inner door handle is pulled.
3. Close the rear door.

---

To open the rear door, pull the outside door handle (2). Even though the doors may be unlocked, the rear door will not open by pulling the inner door handle until the rear door child safety lock is unlocked.

---

**WARNING**

**Rear door locks**

If children accidentally open the rear doors while the vehicle is in motion, they could fall out and be severely injured or killed. To prevent children from opening the rear doors from the inside, the rear door safety locks should be used whenever children are in the vehicle.
TRUNK (4 DOOR, 2 DOOR)

Opening the trunk

• Press the trunk unlock button for more than 1 second on the transmitter (or smart key).

• Press the button on the trunk handle with the smart key in your possession (if equipped).

• To open the trunk from inside the vehicle, pull the trunk lid release lever. Once the trunk is opened and then closed, the trunk is locked automatically.

*NOTICE*

In cold and wet climates, trunk locks and trunk mechanisms may not work properly due to freezing conditions.

**WARNING**

The trunk swings upward. Make sure no objects or people are near the rear of the vehicle when opening the trunk.

**CAUTION**

Make certain that you close the trunk before driving your vehicle. Possible damage may occur to the trunk lift cylinders and attached hardware if the trunk is not closed prior to driving.

Closing the trunk

To close the trunk, lower the trunk lid, then press down on it until it locks. To be sure the trunk lid is securely fastened, always check by trying to pull it up again.

**WARNING**

The trunk lid should be always kept completely closed while the vehicle is (Continued)
(Continued)
in motion. If it is left open or ajar, poisonous exhaust gases may enter the vehicle and serious illness or death may result.

**WARNING**
No one should be allowed to occupy the trunk at any time. The trunk is a very dangerous location in the event of a crash.

**WARNING**
• For emergencies, be fully aware of the location of the emergency trunk safety release lever in this vehicle and how to open the trunk if you are accidentally locked in the trunk.
• No one should be allowed to occupy the trunk at any time. The trunk is a very dangerous location in the event of a crash.
• Use the release lever for emergencies only. Use with extreme caution, especially while the vehicle is in motion.

Emergency trunk safety release

Your vehicle is equipped with an emergency trunk safety release lever located inside the trunk. When someone is inadvertently locked in the trunk, the trunk can be opened by moving the lever in the direction of the arrow and pushing open the trunk.
On a vehicle equipped with a smart key, the trunk can be opened with no-touch activation using the Smart Trunk system.

**How to use the Smart Trunk**

The trunk can be opened with no-touch activation satisfying all the conditions below.
- After 15 seconds when all doors are closed and locked.
- Positioned in the detecting area for more than 3 seconds.

**NOTICE**

- The Smart Trunk does not operate when:
  - The smart key is detected within 15 seconds after the doors are closed and locked, and is continuously detected.
  - The smart key is detected within 15 seconds after the doors are closed and locked, and 1.5 m from the front door handles (for vehicles equipped with Welcome Light)
  - A door is not locked or closed.
  - The smart key is in the vehicle.

1. Setting
   To activate the Smart Trunk,
   1. Change the LCD modes to User setting mode
   2. Select the Door mode
   3. Check the Smart Trunk.
   For more details, refer to “LCD Windows” on page 4-64.

2. Detect and Alert
   If you are positioned in the detecting area (50~100 cm behind the vehicle) carrying a smart key, the hazard warning lights will blink and chime will sound for about 3 seconds to alert you the smart key has been detected and the trunk will open.

**NOTICE**

Do not approach the detecting area if you do not want the trunk to open.

(Continued)
(Continued)

open. If you have unintentionally entered the detecting area and the hazard warning lights and chime starts to operate, leave the detecting area with the smart key. The trunk will stay closed.

3. Automatic opening
   The hazard warning lights will blink and chime will sound 2 times and then the trunk will open.

⚠️ WARNING

- Make certain that you close the trunk before driving your vehicle.
- Make sure there are no people or objects around the trunk before opening or closing the trunk.
- Make sure objects in the rear cargo area do not come out when opening the trunk on the slope way. It may cause serious injury.
- Make sure to deactivate the Smart trunk function when washing your vehicle. Otherwise, the trunk may open inadvertently.
- The key should be kept out of reach of children. Children may inadvertently open the Smart Trunk while playing around the rear area of the vehicle.

How to deactivate the Smart Trunk function using the smart key

1. Door lock
2. Door unlock
3. Trunk open

If you press any button of the smart key during the Detect and Alert stage, the Smart Trunk function will be deactivated.
Make sure to be aware of how to deactivate the Smart Trunk function for emergency situations.
**NOTICE**

- If you press the door unlock button (2), the Smart Trunk function will be deactivated temporarily. But, if you do not open any door for 30 seconds, the smart trunk function will be activated again.
- If you press the trunk open button (3) for more than 1 second, the trunk opens.
- If you press the door lock button (1) or trunk open button (3) when the Smart Trunk function is not in the Detect and Alert stage, the smart trunk function will not be deactivated.
- In case you have deactivated the Smart Trunk function by pressing the smart key button and opened a door, the smart trunk function can be activated again by closing and locking all doors.

**Detecting area**

- The Smart Trunk operates with a welcome alert if the smart key is detected within 50-100 cm from the trunk.
- The alert stops at once if the smart key is positioned outside the detecting area during the Detect and Alert stage.

**NOTICE**

- The Smart Trunk function will not work if any of the following occurs:
  - The smart key is close to a radio transmitter such as a radio station or an airport which can interfere with normal operation of the transmitter.
  - The smart key is near a mobile two way radio system or a cellular phone.
  - Another vehicle’s smart key is being operated close to your vehicle.
- The detecting range may decrease or increase when:
  - One side of the tire is raised to replace a tire or to inspect the vehicle.
  - The vehicle is slantingly parked on a slope or unpaved road, etc.
Features of your vehicle

TAILGATE (5 DOOR)

Opening the tailgate

- The tailgate is locked or unlocked when all doors are locked or unlocked with the transmitter (or smart key) or central door lock switch.
- If unlocked, the tailgate can be opened by pressing the handle and pulling it up.
- When all doors are locked if the tailgate unlock button on the smart key is pressed for more than 1 second, the tailgate is unlocked. Once the tailgate is opened and then closed, the tailgate is locked automatically.

* NOTICE

In cold and wet climates, tailgate lock and tailgate mechanisms may not work properly due to freezing conditions.

! WARNING

The tailgate swings upwards. Make sure no objects or people are near the rear of the vehicle when opening the tailgate.

! CAUTION

Make certain that you close the tailgate before driving your vehicle. Possible damage may occur to the tailgate lift cylinders and attached hardware if the tailgate is not closed prior to driving.

Closing the tailgate

To close the tailgate, lower and push down the tailgate firmly. Make sure that the tailgate is securely latched.

! WARNING

Make sure your hands, feet and other parts of your body are safely out of the way before closing the tailgate.
CAUTION

Make sure nothing is near the tailgate latch and striker while closing the tailgate. It may damage the tailgate’s latch.

WARNING

■ Exhaust fumes
If you drive with the tailgate open, you will draw dangerous exhaust fumes into your vehicle which can cause serious injury or death to vehicle occupants.
If you must drive with the tailgate open, keep the air vents and all windows open so that additional outside air comes into the vehicle.

WARNING

■ Rear cargo area
Occupants should never ride in the rear cargo area where no restraints are available. To avoid injury in the event of an accident or sudden stops, occupants should always be properly restrained.

Emergency tailgate safety release

2. Push the mechanical key to the right.
3. Push up the tailgate.

WARNING

• For emergencies, be fully aware of the location of the emergency tailgate safety release lever in the vehicle and how to open the tailgate if you are accidentally locked in the luggage compartment.

• No one should be allowed to occupy the luggage compartment of the vehicle at any time. The luggage compartment is a very dangerous location in the event of a crash.

• Use the release lever for emergencies only. Use with extreme caution, especially while the vehicle is in motion.

(Continued)

Your vehicle is equipped with the emergency tailgate safety release lever located on the bottom of the tailgate. When someone is inadvertently locked in the luggage compartment. The tailgate can be opened by doing as follows:
1. Input the mechanical key into the hole.
1. Driver’s door power window switch
2. Front passenger’s door power window switch
3. Rear door (left) power window switch* 
4. Rear door (right) power window switch* 
5. Window opening and closing
6. Automatic power window up*/down* 
7. Power window lock switch* 

*NOTICE

In cold and wet climates, power windows may not work properly due to freezing conditions.

**Power windows (if equipped)**
The ignition switch must be in the ON position for power windows to operate.
Each door has a power window switch that controls the door's window. The driver has a power window lock button which can block the operation of passenger windows. The power windows can be operated for approximately 30 seconds after the ignition key is removed or turned to the ACC or LOCK position. However, if the front doors are opened, the power windows cannot be operated even within the 30 second period.
The driver's door has a master power window switch that controls all the windows in the vehicle. If the window cannot be closed because it is blocked by objects, remove the objects and close the window.

*NOTICE*

While driving with the rear windows down or with the sunroof (if equipped) in an open (or partially open position), your vehicle may demonstrate a wind buffeting or pulsation noise. This noise is a normal occurrence and can be reduced or eliminated by taking the following actions. If the noise occurs with one or both of the rear windows down, partially lower both front windows approximately one inch. If you experience the noise with the sunroof open, slightly reduce the size of the sunroof opening.

**Window opening and closing**

**WARNING**

Do not install any accessories in the area of windows. It may impact jam protection.

Type A
To open or close a window, press down or pull up the front portion of the corresponding switch to the first detent position (5).
Type B - Auto down window (if equipped)
Pressing the power window switch momentarily to the second detent position (6) completely lowers the window even when the switch is released. To stop the window at the desired position while the window is in operation, pull up the switch momentarily to the opposite direction of the window movement.

Type C - Auto up/down window (if equipped)
Pressing or pulling up the power window switch momentarily to the second detent position (6) completely lowers or raises the window even when the switch is released. To stop the window at the desired position while the window is in operation, pull up or press down and release the switch.
If the power window does not operate normally, the automatic power window system must be reset as follows:
1. Turn the ignition switch to the ON position.

2. Close the window and continue pulling up the power window switch for at least 1 second after the window is completely closed.

Automatic reversal - Driver and passenger side (if equipped, for type C)
If the upward movement of the window is blocked by an object or part of the body, the window will detect the resistance and will stop upward movement. The window will then lower approximately 30 cm (11.8 in.) to allow the object to be cleared.
If the window detects the resistance while the power window switch is pulled up continuously, the window will stop upward movement then lower approximately 2.5 cm (1 in.).
And if the power window switch is pulled up continuously again within 5 seconds after the window is lowered by the automatic window reversal feature, the automatic window reversal will not operate.

**NOTICE**

The automatic reverse feature for the window is only active when the “auto up” feature is used by fully pulling up the switch. The automatic reverse feature will not operate if the window is raised using the half-way position on the power window switch.

**WARNING**

Always check for obstructions before raising any window to avoid injuries or vehicle damage. If an object less than 4 mm (0.16 in.) in diameter is caught between the window glass and the upper window channel, the automatic reverse window may not

(Continued)

detect the resistance and will not stop and reverse direction.

**WARNING**

The automatic reverse feature doesn’t activate while resetting power window system. Make sure body parts or other objects are safely out of the way before closing the windows to avoid injuries or vehicle damage.

Short drop (for 2 Door)

When you open the front door(s), if the front window(s) fully closed, the front windows will drop down about 0.4 in. (10mm) automatically. And then if you close the door(s), the window(s) will be fully closed automatically. This function prevents damage to the windows. This is not a malfunction. This is a normal condition.

If the windows does not drop down automatically because ice has formed around it, tap lightly the windows to break the ice. Do not pry on the windows. If necessary, move the vehicle to a warm place and allow the ice to melt.

Power window lock button (if equipped)

The driver can disable the power window switches on the rear passengers’ doors by pressing the power window lock switch to the lock position (pressed).

When the power window lock switch is pressed:
- The driver’s master control can operate all the power windows.
- The front passenger’s control can operate the front passenger’s power window.
The rear passenger’s control cannot operate the rear passenger’s power window.

⚠️ CAUTION

- To prevent possible damage to the power window system, do not open or close two windows or more at the same time. This will also ensure the longevity of the fuse.
- Never try to operate the main switch on the driver’s door and the individual door window switch in opposite directions at the same time. If this is done, the window will stop and cannot be opened or closed.

⚠️ WARNING

- Windows
  - Never leave the keys in your vehicle with unsupervised children, when the engine is running.

(Continued)

- NEVER leave any child unattended in the vehicle. Even very young children may inadvertently cause the vehicle to move, entangle themselves in the windows, or otherwise injure themselves or others.
- Always double check to make sure all arms, hands, head and other obstructions are safely out of the way before closing a window.
- Do not allow children play with the power windows. Keep the driver’s door power window lock button in the LOCK position (pressed). Serious injury can result from unintentional window operation by the child.
- Do not extend heads or any limbs outside the window while the vehicle is in motion.
HOOD

Opening the hood

1. Pull the release lever to unlatch the hood. The hood should pop open slightly.

**WARNING**

Open the hood after turning off the engine on a flat surface, shifting the shift lever to the P (Park) position for automatic transaxle / dual clutch transmission and to the 1st (First) gear or R (Reverse) for manual transaxle, and setting the parking brake.

2. Go to the front of the vehicle, raise the hood slightly, push the secondary latch left side (1) inside of the hood center and lift the hood (2).

3. Pull out the support rod.

4. Hold the hood opened with the support rod.

**WARNING**

■ Hot parts

Be very careful not to touch the support rod when the engine and parts are hot. You could get burned or get seriously injured.

Closing the hood

1. Before closing the hood, check the following:
   - All filler caps in the engine compartment must be correctly installed.
   - Gloves, rags or any other combustible material must be removed from the engine compartment.

2. Return the support rod to its clip to prevent it from rattling.

3. Lower the hood until it is about 30 cm above the closed position and let it drop. Make sure that it locks into place.
4. Check that the hood has engaged properly. If the hood can be raised slightly, it is not properly engaged. Open it again and close it with a little more force.

![WARNING]

**WARNING**

- Before closing the hood, ensure that all obstructions are removed from the hood opening. Closing the hood with an obstruction present in the hood opening may result in property damage or severe personal injury.
- Do not leave gloves, rags or any other combustible material in the engine compartment. Doing so may cause a heat-induced fire.

**WARNING**

- Always double check to be sure that the hood is firmly latched before driving away. If it is not latched, the hood could open while the vehicle is being driven, causing a total loss of visibility, which might result in an accident.
- The support rod must be inserted completely into the hole provided whenever you inspect the engine compartment. This will prevent the hood from falling and possibly injuring you.
- Do not move the vehicle with the hood raised. The view will be blocked and the hood could fall or get damaged.
**FUEL FILLER LID**

**Opening the fuel filler lid**

The fuel-filler lid must be opened from inside the vehicle by pulling up on the fuel-filler lid release lever located on the front floor area on the driver’s seat.

*NOTICE*

If the fuel filler lid does not open because ice has formed around it, tap lightly or push on the lid to break the ice and release the lid. Do not pry on the lid. If necessary, spray around the lid with an approved de-icer fluid (do not use radiator anti-freeze) or move the vehicle to a warm place and allow the ice to melt.

1. Stop the engine.

2. To open the fuel filler lid, pull the fuel filler lid release lever.
3. Pull open the fuel filler lid (1).
4. To remove the cap, turn the fuel filler cap (2) counterclockwise.
5. Refuel as needed.

**Closing the fuel filler lid**

1. To install the cap, turn it clockwise until it “clicks” once. This indicates that the cap is securely tightened.
2. Close the fuel filler lid and push it lightly and make sure that it is securely closed.

**WARNING**

- Refueling (Continued)
(Continued)

- If pressurized fuel sprays out, it can cover your clothes or skin and subject you to the risk of fire and burns. Always remove the fuel cap carefully and slowly. If the cap is venting fuel or if you hear a hissing sound, wait until the condition stops before completely removing the cap.

- Do not "top off" after the nozzle automatically shuts off when refueling.

- Always check that the fuel cap is installed securely to prevent fuel spillage in the event of an accident.

(Continued)

severe burns or death by fire or explosion.

- Read and follow all warning posted at the gas station facility.

- Before refueling note the location of the Emergency Gasoline Shut-Off, if available, at the gas station facility.

- Before touching the fuel nozzle, you should eliminate potentially dangerous static electricity discharge by touching another metal part of the vehicle, a safe distance away from the fuel filler neck, nozzle, or other gas source.

(Continued)

- Do not get back into a vehicle once you have begun refueling since you can generate static electricity by touching, rubbing or sliding against any item or fabric (polyester, satin, nylon, etc.) capable of producing static electricity. Static electricity discharge can ignite fuel vapors resulting in rapid burning. If you must reenter the vehicle, you should once again eliminate potentially dangerous static electricity discharge by touching a metal part of the vehicle, away from the fuel filler neck, nozzle or other gasoline source.

- When using an approved portable fuel container, be sure to place the container on the ground prior to refueling. Static electricity discharge from the container can ignite fuel vapors causing a fire. Once refueling has begun, contact with the vehicle should be maintained until the filling is complete. Use only approved portable plastic fuel containers designed to carry and store gasoline.

(Continued)
(Continued)

- Do not use cellular phones while refueling. Electric current and/or electronic interference from cellular phones can potentially ignite fuel vapors causing a fire.

- When refueling, always shut the engine off. Sparks produced by electrical components related to the engine can ignite fuel vapors causing a fire. Once refueling is complete, check to make sure the filler cap and filler door are securely closed, before starting the engine.

- DO NOT use matches or a lighter and DO NOT SMOKE or leave a lit cigarette in your vehicle while at a gas station especially during refueling. Automotive fuel is highly flammable and can, when ignited, result in fire.

- If a fire breaks out during refueling, leave the vicinity of the vehicle, and immediately contact the manager of the gas station and then contact the local fire department. Follow any safety instructions they provide.

⚠️ CAUTION

- Make sure to refuel your vehicle according to the “Fuel requirements” on page 1-03.

- If the fuel filler cap requires replacement, please make sure that you use parts designed for replacement in your vehicle. An incorrect fuel filler cap can result in a serious malfunction of the fuel system or emission control system. For more detailed information, Kia recommends to contact an authorized Kia dealer/service partner.

- Do not spill fuel on the exterior surfaces of the vehicle. Any type of fuel spilled on painted surfaces may damage the paint.

- After refueling, make sure the fuel cap is installed securely to prevent fuel spillage in the event of an accident.
SUNROOF (IF EQUIPPED)

If your vehicle is equipped with a sunroof, you can slide or tilt your sunroof with the sunroof control switch located on the overhead console. The sunroof can only be opened, closed, or tilted when the ignition switch is in the ON position.

* NOTICE

- In cold and wet climates, the sunroof may not work properly due to freezing conditions.

(Continued)

• After washing the car or after there is rain, be sure to wipe off any water that is on the sunroof before operating it.

⚠️ CAUTION

- Do not continue to move the sunroof control lever after the sunroof is in the fully open, closed, or tilt position. Damage to the motor or system components could occur.
- Make sure the sunroof is closed fully when leaving your vehicle. If the sunroof is open, rain or snow may leak through the sunroof and wet the interior as well as cause theft.

* NOTICE

The sunroof cannot slide when it is in the tilt position nor can it be tilted while in an open or slide position.

⚠️ WARNING

Never adjust the sunroof or sunshade while driving. This could result in loss of control and an accident that may cause death, serious injury, or property damage.

⚠️ WARNING

- In order to prevent accidental operation of the sunroof, especially by a child, do not let a child operate the sunroof.
- Do not sit on the top of the vehicle. It may cause vehicle damage.
Sliding the sunroof

To open or close the sunroof (manual slide feature), pull or push the sunroof control lever backward or forward to the first detent position.

To open the sunroof (autoslide feature), press the sunroof control switch backward to the second detent position. The sunroof will slide to the recommended open position (about 5 cm before the maximum slide open position).

To close the sunroof (autoslide feature), move the sunroof control switch forward to the second detent position. The sunroof will close all the way. To stop the sunroof sliding at any point, pull or push the sunroof control switch momentarily.

To open the sunroof to the maximum slide open position, press the switch towards the rear of the vehicle once again and hold it until the sunroof slide all the way open.

* NOTICE

To reduce wind noise while driving, we recommend you to drive at the recommended position (about 5 cm before the maximum slide open position).

If an object or part of the body is detected while the sunroof is closing automatically, it will reverse direction, and then stop.

The auto reverse function does not work if a small obstacle is between the sliding glass and the sunroof sash. You should always check that all passengers and objects are away from the sunroof before closing it.

Objects less than 0.16 inch (4 mm) in diameter caught between the sunroof glass and the front glass channel may not be detected by the automatic reverse glass and the glass will not stop and reverse direction.
Tilting the sunroof
To open the sunroof

Push the sunroof control lever upward until the sunroof moves to the desired position.

To close the sunroof
Pull the sunroof lever downward until the sunroof moves to the desired position.

⚠️ WARNING
- Sunroof

(Continued)
- Be careful that someone’s head, hands and body are not trapped by a closing sunroof.
- Do not extend face, neck, arms or body outside through the sunroof opening while driving.
- Make sure hand and face are safely out of the way before closing a sunroof.

⚠️ WARNING
- In order to prevent accidental operation of the sunroof, especially by a child, do not let a child operate the sunroof.

⚠️ CAUTION
- Periodically remove any dirt that may accumulate on the guide rail.
- If you try to open the sunroof when the temperature is below freezing or when the sunroof is covered with snow or ice, the glass or the motor could be damaged.
- While using sunroof for a long time, a dust between sunroof and roof panel can make a noise. Open the sunroof and regularly remove the dust using clean cloth.

⚠️ WARNING
- Do not sit on the top of the vehicle. It may cause vehicle damage.
Sunshade

The sunshade will be opened with the glass panel automatically when the glass panel is opened. You will have to close it manually if you want it closed.

**CAUTION**

The sunroof is made to slide together with the sunshade. Do not leave the sunshade closed while the sunroof is open.

Resetting the sunroof

Reset the sunroof when:

- The vehicle battery has discharged or replaced, or the fuse has been replaced.
- The sunroof does not operate normally.
- The glass opens during operation even though there are no obstructions.
- The glass is not of uniform height.

1. Turn the ignition switch to the ON position or start the engine. We recommend resetting the sunroof while the engine is running.
2. Push and release the control lever forward in the direction of close repeatedly until the sunroof does not move. Sunroof will stop at the close position or the tilt position depends on the sunroof condition.
3. Release the control lever when sunroof does not move.
4. Push the control lever forward in the direction of close about 10 seconds.
   - When the sunroof is in the close position:
     Glass will tilt up then will move up and down slightly.
   - When the sunroof is in the tilt position:
     Glass will move up and down slightly.
5. Within 3 seconds, push the sunroof control lever forward in the direction of close until the sunroof operates as follows:
   Tilt down → Slide Open → Slide Close.

**NOTICE**

Do not release the lever until the operation is completed.
If you release the lever during operation, try again from step 2.

6. Release the sunroof control lever after all operation has completed.
(The sunroof system has been reset.)

For more detailed information, Kia recommends to contact an authorized Kia dealer/service partner.
CAUTION

If the sunroof is not reset when the vehicle battery is disconnected or discharged, or related fuse is blown, the sunroof may operate improperly.

Sunroof open warning

If the driver removes the ignition key (smart key: turns off the engine) when the sunroof is not fully closed, the warning chime will sound for approximately 10 seconds and a message will appear on the LCD window. Close the sunroof securely when leaving your vehicle.
STEERING WHEEL

Electronic power steering (EPS)
Power steering uses the motor to assist you in steering the vehicle. If the engine is off or if the power steering system becomes inoperative, the vehicle may still be steered, but it will require increased steering effort.
The electronic power steering is controlled by the power steering control unit which senses the steering wheel torque and vehicle speed to command the motor.
The steering effort becomes heavier as the vehicle’s speed increases and becomes lighter as the vehicle’s speed decreases for better control of the steering wheel.
Should you notice any change in the effort required to steer during normal vehicle operation, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

* NOTICE

The following symptoms may occur during normal vehicle operation:

(Continued)

(Continued)

• The EPS warning light does not illuminate.
• The steering effort is high immediately after turning the ignition switch on. This happens as the EPS system performs the diagnostics. When the diagnostics is completed, the steering effort will return to its normal condition.
• A click noise may be heard from the EPS relay after the ignition switch is turned to the ON or LOCK position.
• Motor noise may be heard when the vehicle is at a stop or at a low driving speed.
• The steering effort can suddenly increase, if the operation of the EPS system is stopped to prevent serious accidents when EPS control unit detects malfunction of the EPS system by self-diagnosis.

(Continued)

(Continued)

• The steering effort increases if the steering wheel is rotated continuously when the vehicle is not in motion. However, after a few minutes, it will return to its normal conditions.
• If the Electronic Power Steering System does not operate normally, the warning light will illuminate on the instrument cluster. The steering wheel may become difficult to control or operate abnormally. Take your vehicle to a professional workshop and have the system checked as soon as possible. Kia recommends to visit an authorized Kia dealer/service partner.
• When you operate the steering wheel in low temperature, abnormal noise could occur. If temperature rises, the noise will disappear. This is a normal condition.

(Continued)
(Continued)

- When the charging system warning light comes on or the battery voltage is low (when the alternator or battery does not operate normally), the steering wheel may get heavy and become difficult to control operate abnormally.

Tilt and telescopic steering
Tilt and telescopic steering allows you to adjust the steering wheel before you drive. You can also raise it to give your legs more room when you exit and enter the vehicle. The steering wheel should be positioned so that it is comfortable for you to drive, while permitting you to see the instrument panel warning lights and gauges.

**WARNING**

- Never adjust the angle of the steering wheel while driving. You may lose steering control and cause severe personal injury, death or accidents.

(Continued)

(Continued)

- After adjusting, push the steering wheel both up and down to be certain it is locked in position.

Heated steering wheel (if equipped)

With the ignition switch in the ON position, pressing the heated steering wheel button warms the steering wheel. The indicator on the button will illuminate and notify you on the LCD window. To turn the heated steering wheel off, press the button once again. The indicator on the button will turn off and notify you on the LCD window.

To change the steering wheel angle, pull down the lock release lever (1), adjust the steering wheel to the desired angle (2) and height (3), then pull up the lock-release lever to lock (4) the steering wheel in place. Be sure to adjust the steering wheel to the desired position before driving.
**NOTICE**

The heated steering wheel will turn off automatically approximately 30 minutes after the heated steering wheel is turned on.

**CAUTION**

Do not install any grip to operate the steering wheel. This causes damage to the heated steering wheel system.

To sound the horn, press the area indicated by the horn symbol on your steering wheel (see illustration). The horn will operate only when this area is pressed. Check the horn regularly to be sure it operates properly.

**CAUTION**

- Do not strike the horn severely to operate it, or hit it with your fist. Do not press on the horn with a sharp-pointed object.
- When cleaning the steering wheel, do not use an organic solvent such as thinner, benzene, alcohol and gasoline. Doing so may damage the steering wheel.
**FLEX STEER (if equipped)**

The FLEX STEER controls steering effort as driver’s preference or road condition. You can select the desired steering mode by pressing FLEX STEER button. When the FLEX STEER mode button is pressed, the selected steering mode will appear on the LCD window. Each time you press the FLEX STEER mode button, the steering mode will change as follows:

→ Normal → Sport → Comfort →

If the FLEX STEER mode button is not pressed for about 4 seconds, the LCD window will change to the previous screen.

The normal mode offers medium steering effort.
The steering wheel becomes heavier. The sport mode is usually used when driving on highway.

The steering wheel becomes lighter. The comfort mode is usually used when driving downtown or parking the vehicle.

Also, the comfort mode helps weak people to drive easily.

**CAUTION**

- For your safety, if you press the steering mode button while operating the steering wheel, the LCD window will change, but the steering effort will not change immediately. After operating the steering wheel, the steering effort will change automatically to the selected mode.
- Be careful when changing the steering mode while driving.
- When the electronic power steering is not working properly, the flex steering wheel will not work.
MIRRORS

Inside rearview mirror
Adjust the rearview mirror so that the center view through the rear window is seen. Make this adjustment before you start driving.

**WARNING**

- **Rear visibility**
  Do not place objects in the rear seat or cargo area which would interfere with your vision through the rear window.

**WARNING**

Do not modify the inside mirror and don’t install a wide mirror. It could result in injury, during an accident or deployment of the air bag.

Day/night rearview mirror

Make this adjustment before you start driving and while the day/night lever is in the day position.
Pull the day/night lever toward you to reduce the glare from the headlights of the vehicles behind you during night driving.

Remember that you lose some rearview clarity in the night position.

**Electrochromic mirror (ECM) (if equipped)**
The electric rearview mirror automatically controls the glare from the headlights of the vehicles behind you in nighttime or low light driving conditions. The sensor mounted in the mirror senses the light level around the vehicle, and automatically controls the headlight glare from the vehicles behind you.
When the engine is running, the glare is automatically controlled by the sensor mounted in the rearview mirror.
Whenever the shift lever is shifted into reverse (R), the mirror will automatically go to the brightest setting in order to improve the drivers view behind the vehicle.

**CAUTION**

When cleaning the mirror, use a paper towel or similar material dampened with glass cleaner. Do not spray glass cleaner directly on the (Continued)
To operate the electric rearview mirror:
  • The mirror defaults to the ON position whenever the ignition switch is turned on.
  • Press the ON/OFF button (1) to turn the automatic dimming function off. The mirror indicator light will turn off.
  Press the ON/OFF button (1) to turn the automatic dimming function on. The mirror indicator light will illuminate.

Outside rearview mirror
Be sure to adjust the mirror angles before driving.
Your vehicle is equipped with both left-hand and right-hand outside rearview mirrors. The mirrors can be adjusted remotely with the remote switch. The mirror heads can be folded back to prevent damage during an automatic car wash or when passing through a narrow street.

!! WARNING

■ Rearview mirrors
  • The outside rearview mirror is convex. Objects seen in the mirror are closer than they appear.
  • Use your interior rearview mirror or direct observation to determine the actual distance of following vehicles when changing lanes.

!! CAUTION

Do not scrape ice off the mirror face; this may damage the surface of the glass. If ice should restrict the move-

(Continued)

ment of the mirror, do not force the mirror for adjustment. To remove ice, use a deicer spray, or a sponge or soft cloth with warm water.

!! CAUTION

If the mirror is jammed with ice, do not adjust the mirror by force. Use an approved spray de-icer (not radiator antifreeze) to release the frozen mechanism or move the vehicle to a warm place and allow the ice to melt.

!! WARNING

Do not adjust or fold the outside rearview mirrors while the vehicle is moving. This could result in loss of control, and an accident which could cause death, serious injury or property damage.
Remote control

The electric remote control mirror switch allows you to adjust the position of the left and right outside rearview mirrors. To adjust the position of either mirror, move the lever (1) to R or L to select the right side mirror or the left side mirror, then press a corresponding point on the mirror adjustment control to position the selected mirror up, down, left or right. After adjustment, put the lever into neutral (center) position to prevent the inadvertent adjustment.

CAUTION

- The mirrors stop moving when they reach the maximum adjusting angles, but the motor continues to operate while the switch is pressed. Do not press the switch longer than necessary, the motor may be damaged.
- Do not attempt to adjust the outside rearview mirror by hand. Doing so may damage the parts.

Folding the outside rearview mirror

Manual type

To fold the outside rearview mirror, grasp the housing of the mirror and then fold it toward the rear of the vehicle.
Electric type

The outside rearview mirror can be folded or unfolded by pressing the switch as below.
Left (1) : The mirror will unfold.
Right (2) : The mirror will fold.
Center (AUTO) : The mirror will fold or unfold automatically as follows:
  • Without smart key system
    - The mirror will fold or unfold when the door is locked or unlocked by the transmitter.
  • With smart key system
    - The mirror will fold or unfold when the door is locked or unlocked by the smart key.

- The mirror will fold or unfold when the door is locked or unlocked by the button on the outside door handle.
- The mirror will unfold when you approach the vehicle (all doors closed and locked) with a smart key in possession. (if equipped)

⚠️ CAUTION

The electric type outside rearview mirror operates even though the ignition switch is in the OFF position. However, to prevent unnecessary battery discharge, do not adjust the mirrors longer than necessary while the engine is not running.

⚠️ CAUTION

In case it is an electric type outside rearview mirror, don’t fold it by hand. It could cause motor failure.
INSTRUMENT CLUSTER

- Type A

- Type B

1. Tachometer
2. Turn signal indicator lights
3. Speedometer
4. Engine coolant temperature gauge
5. Fuel gauge
6. Warning and indicator lights
7. LCD window

※ The actual cluster in the vehicle may differ from the illustration. For more details, refer to “Gauges” on page 4-55.
1. Tachometer
2. Turn signal indicator lights
3. Speedometer
4. Engine coolant temperature gauge
5. Fuel gauge
6. Warning and indicator lights
7. LCD window

* The actual cluster in the vehicle may differ from the illustration. For more details, refer to “Gauges” on page 4-55.
Instrument cluster control
Adjusting instrument cluster illumination (if equipped)

The brightness of the instrument panel illumination is changed by pressing the illumination control button ("+" or "+") when the ignition switch or Engine Start/Stop button is ON, or the tail lights are turned on.

**WARNING**

Never adjust the instrument cluster while driving. This could result in loss of control and lead to an accident that may cause death, serious injury, or property damage.

- If you hold the illumination control button ("+" or "+"), the brightness will be changed continuously.

- If the brightness reaches to the maximum or minimum level, an alarm will sound.
LCD Window Control

The LCD Window modes can be changed by using the control buttons on the steering wheel.

[Type A]
1. TRIP : TRIP button for changing trip modes
2. RESET : RESET button for resetting items

[Type B]
1. ☻ : MODE button for changing modes
2. ▼ : MOVE button for changing items

3. : SELECT/RESET button for setting or resetting the selected item

* For the LCD modes, refer to “LCD window” on page 4-64.

Gauges

Speedometer

For the LCD modes, refer to “LCD window” on page 4-64.
The speedometer indicates the speed of the vehicle and is calibrated in miles per hour (mph) and/or kilometers per hour (km/h).
The tachometer indicates the approximate number of engine revolutions per minute (rpm).

Use the tachometer to select the correct shift points and to prevent lugging and/or over-revving the engine.

⚠️ CAUTION

Do not operate the engine within the tachometer’s RED ZONE. This may cause severe engine damage.
This gauge indicates the temperature of the engine coolant when the ignition switch or Engine Start/Stop button is ON.

⚠️ CAUTION
If the gauge pointer moves beyond the normal range area toward the “130 or H” position, it indicates overheating that may damage the engine. Do not continue driving with an overheated engine. If your vehicle overheats, refer to “If the Engine Overheats” on page 7-07.

⚠️ WARNING
Never remove the radiator cap when the engine is hot. The engine coolant is under pressure and could severely burn. Wait until the engine is cool before adding coolant to the reservoir.
This gauge indicates the approximate amount of fuel remaining in the fuel tank.

**NOTICE**
- The fuel tank capacity is given in “Recommended lubricants and capacities” on page 9-11.
- The fuel gauge is supplemented by a low fuel warning light, which will illuminate when the fuel tank is nearly empty.
- On inclines or curves, the fuel gauge pointer may fluctuate or the low fuel warning light may come on earlier than usual due to the movement of fuel in the tank.

**WARNING**
- **Fuel Gauge**
  Running out of fuel can expose vehicle occupants to danger. You must stop and obtain additional fuel as soon as possible after the warning light comes on or when the gauge indicator comes close to the “0 or E (Empty)” level.

**CAUTION**
Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire damaging the catalytic converter.
The odometer indicates the total distance that the vehicle has been driven and should be used to determine when periodic maintenance should be performed.

**Odometer**

- Odometer range: 0 ~ 999999 kilometers or miles.

**Outside temperature gauge**

- Temperature range: -40°C ~ 60°C (-40°F ~ 140°F)

The outside temperature on the display may not change immediately like a general thermometer to prevent the driver from being inattentive. To change the temperature unit (from °C to °F or from °F to °C):

- Type A Cluster
  Press the TRIP button more than 5 seconds.
- Type B, C Cluster
  1. Change the LCD modes to User setting mode.
  2. Select the Other features mode.
  3. Select the Temperature Unit. And then, choose the preferred temperature unit.

For more details, refer to “LCD Windows” on page 4-64.
Transaxle shift indicator

**Automatic transaxle shift indicator (if equipped)**

- **Type A**
  - Park: P
- **Type B**
  - Reverse: R
  - Neutral: N
  - Drive: D
  - Sports Mode: 1, 2, 3, 4, 5, 6
- **Type C**

This indicator displays which automatic transaxle shift lever is selected.
- Park: P

---

**Automatic Transaxle Shift Indicator in sports Mode (if equipped, For Europe)**

In the Sports Mode, this indicator informs which gear is desired while driving to save fuel.
- Shifting up: ↑2, ↑3, ↑4, ↑5, ↑6
- Shifting down: ↓1, ↓2, ↓3, ↓4, ↓5

For example

Indicates that shifting up to the 3rd gear is desired (currently the shift lever is in the 2nd or 1st gear).

Indicates that shifting down to the 3rd gear is desired (currently the shift lever is in the 4th, 5th, or 6th gear).

When the system is not working properly, the indicator is not displayed.
Manual Transaxle Shift Indicator (if equipped)

This indicator informs which gear is desired while driving to save fuel.
• Shifting up: ▲2, ▲3, ▲4, ▲5, ▲6
• Shifting down: ▼1, ▼2, ▼3, ▼4, ▼5

For example
▲3: Indicates that shifting up to the 3rd gear is desired (currently the shift lever is in the 2nd or 1st gear).
▼3: Indicates that shifting down to the 3rd gear is desired (currently the shift lever is in the 4th, 5th, or 6th gear).

When the system is not working properly, the indicator is not displayed.

Dual clutch transmission shift indicator (if equipped)

This indicator displays which shift lever is selected.
• Park : P
• Reverse : R
• Neutral : N
• Drive : D1, D2, D3, D4, D5, D6, D7

In the Sports Mode, this indicator informs which gear is desired while driving to save fuel.
• Shifting up : ▲2, ▲3, ▲4, ▲5, ▲6, ▲7
• Shifting down : ▼1, ▼2, ▼3, ▼4, ▼5, ▼6

For example
▲3: Indicates that shifting up to the 3rd gear is desired (currently the shift lever is in the 2nd or 1st gear).
▼3: Indicates that shifting down to the 3rd gear is desired (currently the shift lever is in the 4th, 5th, 6th or 7th gear).

When the system is not working properly, the indicator is not displayed.
Features of your vehicle

LCD WINDOWS (IF EQUIPPED)

Overview

LCD windows show the following various information to drivers.
- Trip information
- LCD modes (for Type B, C)
- Warning messages (for Type B, C)

Trip information (Trip computer)
The trip computer is a microcomputer-controlled driver information system that displays information related to driving.

*NOTICE*

Some driving information stored in the trip computer (for example Average Vehicle Speed) resets if the battery is disconnected.
**Trip Modes**

To change the trip mode, press the “TRIP” button.

**Type B, C**
To change the trip mode, press the MOVE button ▼.

---

**Fuel Economy**

**Type A**

- Range
- Average Fuel Economy
- Instant Fuel Economy

**TRIP A**
- Tripmeter [A]
- Average Vehicle Speed [A]
- Elapsed Time [A]

**TRIP B**
- Tripmeter [B]
- Average Vehicle Speed [B]
- Elapsed Time [B]

- Digital speedometer

---

**Distance To Empty (1)**
- The distance to empty is the estimated distance the vehicle can be driven with the remaining fuel.
Features of your vehicle

- Distance range: 50 ~ 9999 km or 30 ~ 9999 mi.

* NOTICE

• If the vehicle is not on level ground or the battery power has been interrupted, the distance to empty function may not operate correctly.

• The distance to empty may differ from the actual driving distance as it is an estimate of the available driving distance.

• The trip computer may not register additional fuel if less than 6 liters (1.6 gallons) of fuel are added to the vehicle.

• The fuel economy and distance to empty may vary significantly based on driving conditions, driving habits, and condition of the vehicle.

Average Fuel Economy (2)

• The average fuel economy is calculated by the total driving distance and fuel consumption since the last average fuel economy reset.
  - Fuel economy range: 0.0 ~ 99.9 L/100km or MPG
• The average fuel economy can be reset both manually and automatically.

Manual reset
To clear the average fuel economy manually, press the RESET button (Type A: RESET, Type B, C: ) on the steering wheel for more than 1 second when the average fuel economy is displayed.

Automatic reset
To make the average fuel economy be reset automatically whenever refueling, select the “Auto Reset” mode in User Setting menu of the LCD window (Refer to “LCD window” on page 4-64).
Under “Auto Reset” mode, the average fuel economy will be cleared to zero (---) when the vehicle speed exceeds 1 km/h after refueling more than 6 liters (1.6 gallons).

* NOTICE

The average fuel economy is not displayed for more accurate calculation if the vehicle does not drive more than 10 seconds or 50 meters (0.03 miles) since the ignition switch or Engine Start/Stop button is turned to ON.

Instant Fuel Economy (3)

• This mode displays the instant fuel economy during the last few seconds when the vehicle speed is more than 10 km/h (6.2 MPH).
  - Fuel economy range: 0.0 ~ 99.9 L/100km or 0.0 ~ 99.9 MPG (Type A), 0.0 ~ 30.0 L/100km or 0.0 ~ 50.0 MPG (Type B, C)
Trip A/B

• The tripmeter is the total driving distance since the last tripmeter reset.
  - Distance range: 0.0 ~ 9999.9 km or mi.

  - To reset the tripmeter, press the RESET button (Type A : RESET, Type B, C : ) on the steering wheel for more than 1 second when the tripmeter is displayed.

Average Vehicle Speed (2)

• The average vehicle speed is calculated by the total driving distance and driving time since the last average vehicle speed reset.
  - Speed range: 0 ~ 999 km/h or MPH

  - To reset the average vehicle speed, press the RESET button (Type A : RESET, Type B, C : ) on the steering wheel for more than 1 second when the average vehicle speed is displayed.

NOTICE

• The average vehicle speed is not displayed if the driving distance has been less than 50 meters (0.03 miles) or the driving time has been less than 10 seconds since the ignition switch or Engine Start/Stop button was turned to ON.

• Even if the vehicle is not in motion, the average vehicle speed keeps going while the engine is running.

Elapsed Time (3)

• The elapsed time is the total driving time since the last elapsed time reset.
  - Time range (hh:mm): 00:00 ~ 99:59

  - To reset the elapsed time, press the RESET button (Type A : RESET, Type B, C : ) on the steering wheel for more than 1 second when the elapsed time is displayed.
**NOTICE**

Even if the vehicle is not in motion, the elapsed time keeps going while the engine is running.

**Digital speedometer**

- **Type B**
  - 100 km/h

**One time driving information mode**

- **Type B**
  - Drive Info
  - 364 km
  - 24.7 km/L
  - Low Fuel

- **Type C**
  - 100 km/h

This mode displays the current speed of the vehicle.
This display shows trip distance (1), average fuel economy (2) and the vehicle can be driven with the remaining fuel (3). This information is displayed for a few seconds when you turn off the engine and then goes off automatically. The information provided is calculated according to each trip. If the estimated distance is below 1km (1mi.), the distance to empty (3) will display as "---" and a refuel message will appear (4).

**LCD Modes (for Type B, Type C instrument cluster)**

1. **Trip Computer mode**
   This mode displays driving information like the tripmeter, fuel economy, and so on. For more details, refer to “Trip computer” on page 4-64.

2. **Turn By Turn mode (if equipped)**
   This mode displays the state of the navigation.

3. **Audio mode (if equipped)**
   This mode displays the state of the A/V system.

4. **Service mode**
   This mode informs of service interval (mileage or days) and pressure status of each tire.

5. **Master warning mode**
   This mode informs of warning messages related to washer fluid or malfunction of Blind Spot Detection system (BSD) and so on.

6. **User Setting mode**
   On this mode, you can change settings of the doors, lamps and so on.

For controlling the LCD modes, refer to “LCD window Control” on page 4-55.
**A/V Mode (if equipped)**

This mode displays the state of the A/V system.

**Service Mode**

It calculates and displays when you need a scheduled maintenance service (mileage or days). If the remaining mileage or time reaches 1,500 km (900 mi.) or 30 days, "Service in" message is displayed for several seconds each time you set the ignition switch or Engine Start/Stop Button to the ON position.
Service required
If you do not have your vehicle serviced according to the already inputted service interval, “Service required” message is displayed for several seconds each time you set the ignition switch or Engine Start/Stop Button to the ON position.
To reset the service interval to the mileage and days you inputted before:
- Activate the reset mode by pressing the SELECT/RESET button for more than 5 second, then press the SELECT/RESET button again for more than 1 second (Europe).
- Press the SELECT/RESET button for more than 1 second (Except Europe).

Service in OFF
If the service interval is not set, “Service in OFF” message is displayed on the LCD window.
**NOTICE**

If any of the following conditions occurs, the mileage and days may be incorrect.
- The battery cable is disconnected.
- The fuse switch is turned off.
- The battery is discharged.

---

**User Settings Mode**

**Type B**

![User Settings Mode Type B]

**Type C**

![User Settings Mode Type C]

On this mode, you can change setting of the doors, lamps, and so on.

---

**WARNING**

Do not adjust the User Setting while driving. You may lose your steering control and cause severe personal injury or accidents.

---

**Driving Assist (if equipped)**

- Rear Cross Traffic Alert (if equipped)
  If this item is checked, the rear cross traffic alert function will be activated. For more details, refer to “Blind Spot Detection System” on page 6–54.

**Door**

- Automatically Lock
  - Off: The auto door lock operation will be deactivated.
  - Enable on Speed: All doors will be automatically locked when the vehicle speed exceeds 15km/h (9.3mph).
  - Enable on Shift: All doors will be automatically locked if the automatic transaxle / dual clutch transmission shift lever is shifted from the P (Park) position to the R (Reverse), N (Neutral), or D (Drive) position.
• Automatically Unlock
  - Off: The auto door unlock operation will be canceled.
  - Vehicle Off/On key out: All doors will be automatically unlocked when the ignition key is removed from the ignition switch or the Engine Star/Stop button is set to the OFF position.
  - Driver Door Unlock: All doors will be automatically unlocked if the driver’s door is unlocked.
  - On Shift to P: All doors will be automatically unlocked if the automatic transaxle/dual clutch transmission shift lever is shifted to the P (Park) position.

• Smart Trunk (if equipped)
  To activate or deactivate the Smart Trunk system.
  For more details, refer to “Smart Trunk” on page 4–23.

Light
• One Touch Turn Signal (if equipped)
  - Off: The one touch turn signal function will be deactivated.
  - 3, 5, 7 Flashes: The lane change signals will blink 3, 5, or 7 times when the turn signal lever is moved slightly.
  For more details, refer to “Light” on page 4–97.

• Head Lamp Delay (if equipped)
  - If this item checked, the head lamp delay function will be activated.

• Welcome Light (If equipped)
  - If this item checked, the welcome light function will be activated.

Sound
• BSD (Blind Spot Detection) Sound (if equipped)
  If this item checked, the blind spot detection sound will be activated.
  For more details, refer to “Blind Spot Detection System” on page 6–54.

• Welcome Sound (if equipped)
  If this item checked, the welcome sound function will be activated.

Convenience
• Seat Easy Access (if equipped)
  - None: The seat easy access function is deactivated.
  - Normal/Extended: When you turn off the engine, the driver’s seat will automatically move rearward short (Normal) or long (Extended) for you to enter or exit the vehicle more comfortably.
  If you change the Engine Start/Stop button from OFF position to the ACC, ON, or START position, the driver’s seat will return to the original position.
  For more details, refer to “Driver Position Memory System” on page 3–08.

Service interval (if equipped, Except Europe)
On this mode, you can activate the service interval function with mileage (km or mi.) and period (months).
• Off: The service interval function will be deactivated.
• On: You can set the service interval (mileage and months).

For more details, refer to “Service Mode” on page 4–70

Other features
• Fuel Economy Auto Reset
- Off : The average fuel economy will not reset automatically whenever refueling.
- After Ignition : The average fuel economy will reset automatically when driving.
- After Refueling : The average fuel economy will reset automatically when refueling.

- Fuel Economy Unit
  Choose the preferred fuel economy unit.

- Temperature Unit
  Choose the preferred temperature unit.

- Language (if equipped)
  Choose preferred the language.

**Warning messages**

Warning messages appear on the LCD to warn the driver. It is located in the center of the instrument cluster. The warning message may appear differently depending on the type of instrument cluster and some may not show the warning message at all.

The warning message is shown in either symbol, symbol and text, or text type only. You can choose the preferred language (for Type B and C only) by selecting the User setting menu in LCD mode.

* It means that any door is open.
Trunk (tailgate) Open

- Type B
- Type C

- It means that the trunk (tailgate) is open.

Sunroof Open (if equipped)

- Type A
- Type B
- Type C

- This warning is displayed if you turn off the engine when the sunroof is open.

Turn on FUSE SWITCH (if equipped)

- Type A
- Type B
- Type C

- This warning message illuminates if the fuse switch under the steering wheel is OFF.
- It means that you should turn the fuse switch on.
For more details, refer to “Fuses” on page 8-54.

Engine has overheated

This warning message illuminates when the engine coolant temperature is above 120°C (248°F). This means that the engine is overheated and may be damaged. If your vehicle is overheated, refer to “Overheating” on page 7-07.

Shift to P (for smart key system and automatic transaxle / dual clutch transmission)

- This warning message illuminates if you try to turn off the engine without the shift lever in P (Park) position.
- At this time, the Engine Start/Stop Button turns to the ACC position (If you press the Engine Start/Stop Button once more, it will turn to the ON position).

Low Key Battery (for smart key system)

- This warning message illuminates if the battery of the smart key is discharged when the Engine Start/Stop Button changes to the OFF position.

Press START button while turn steering (for smart key system)

- This warning message illuminates if the steering wheel does not unlock normally when the Engine Start/Stop Button is pressed.
- It means that you should press the Engine Start/Stop Button while turning the steering wheel right and left.

Steering wheel unlocked (for smart key system)

- This warning message illuminates if the steering wheel does not lock when the Engine Start/Stop Button changes to the OFF position.

Check Steering Wheel Lock System (for smart key system)

- This warning message illuminates if the steering wheel does not lock normally when the Engine Start/Stop Button changes to the OFF position.
Press brake pedal to start engine (for smart key system and automatic transaxle / dual clutch transmission)
- This warning message illuminates if the Engine Start/Stop Button changes to the ACC position twice by pressing the button repeatedly without depressing the brake pedal.
- It means that you should depress the brake pedal to start the engine.

Press clutch pedal to start engine (for smart key system and manual transaxle)
- This warning message illuminates if the Engine Start/Stop Button changes to the ACC position twice by pressing the button repeatedly without depressing the clutch pedal.
- It means that you should depress the clutch pedal to start the engine.

Key not in vehicle (for smart key system)
- This warning message illuminates if the smart key is not in the vehicle when you press the Engine Start/Stop Button.

- It means that you should always have the smart key with you.

Key not detected (for smart key system)
- This warning message illuminates if the smart key is not detected when you press the Engine Start/Stop Button.

Press START button again (for smart key system)
- This warning message illuminates if you can not operate the Engine Start/Stop Button when there is a problem with the Engine Start/Stop Button system.
- It means that you could start the engine by pressing the Engine Start/Stop Button once more.
- If the warning illuminates each time you press the Engine Start/Stop Button, have the vehicle inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Press START button with smart key (for smart key system)
- This warning message illuminates if you press the Engine Start/Stop Button while the warning message “Key not detected” is illuminating.
- At this time, the immobilizer indicator light blinks.

Check fuse “BRAKE SWITCH” (for smart key system and automatic transaxle / dual clutch transmission)
- This warning message illuminates if the brake switch fuse is disconnected.
- It means that you should replace the fuse with a new one. If that is not possible, you can start the engine by pressing the Engine Start/Stop Button for 10 seconds in the ACC position.

Shift to P or N to start engine (for smart key system and automatic transaxle / dual clutch transmission)
- This warning message illuminates if you try to start the engine with the shift lever not in the P (Park) or N (Neutral) position.
NOTICE

You can start the engine with the shift lever in the N (Neutral) position. But, for your safety, we recommend that you start the engine with the shift lever in the P (Park) position.

Low Washer Fluid (if equipped)
- This warning message illuminates on the service reminder mode if the washer fluid level in the reservoir is nearly empty.
- It means that you should refill the washer fluid.

Low Fuel
- This warning message illuminates if the fuel tank is nearly empty.
  - When the low fuel level warning light is illuminates.
    Add fuel as soon as possible.

Diesel Particulate Filter (DPF) warning
(for Diesel engine)
This warning message illuminates if the DPF system has a malfunction. At this time, DPF warning light also blinks.

In this case, have the DPF system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner. For more details, refer to “Warning lights” on page 4-79.
WARNING AND INDICATOR LIGHTS

Warning lights

* NOTICE

Warning lights
Make sure that all warning lights are OFF after starting the engine. If any light is still ON, this indicates a situation that needs attention.

Air bag warning light
This warning light illuminates:
• Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 6 seconds and then goes off.
• When there is a malfunction with the SRS.
  In this case, have the vehicle inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Seat belt warning light
This warning light informs the driver that the seat belt is not fastened.

* For more details, refer to “Seat belts” on page 3-19.

Parking brake & brake fluid warning light
This warning light illuminates:
• Once you set the Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds
  - It remains on if the parking brake is applied.
• When the parking brake is applied.
• When the brake fluid level in the reservoir is low.
  - If the warning light illuminates with the parking brake released, it indicates the brake fluid level in reservoir is low.

If the brake fluid level in the reservoir is low:
1. Drive carefully to the nearest safe location and stop your vehicle.
2. With the engine stopped, check the brake fluid level immediately and add fluid as required (For more details, refer to “Brake fluid” on page 8-31). Then check all brake components for fluid leaks. If any leak on the brake system is still found, the warning light remains on, or the brakes do not operate properly, do not drive the vehicle.
   In this case, have the vehicle towed to a professional workshop and inspected. Kia recommends to visit an authorized Kia dealer/service partner.

Dual-diagonal braking system
Your vehicle is equipped with dual-diagonal braking systems. This means you still have braking on two wheels even if one of the dual systems should fail. With only one of the dual systems working, more than normal pedal travel and greater pedal pressure are required to stop the vehicle.
   Also, the vehicle will not stop in as short a distance with only a portion of the brake system working.
   If the brakes fail while you are driving, shift to a lower gear for additional engine braking and stop the vehicle as soon as it is safe to do so.
WARNING

■ Parking Brake & Brake Fluid Warning Light

Driving the vehicle with a warning light ON is dangerous. If the Parking Brake & Brake Fluid Warning Light illuminates with the parking brake released, it indicates that the brake fluid level is low. In this case, have the vehicle inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Anti-lock brake system (ABS) warning light

This warning light illuminates:
• Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.

• When there is a malfunction with the ABS (The normal braking system will still be operational without the assistance of the anti-lock brake system). In this case, have the vehicle inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Electronic Brake force Distribution (EBD) system warning light

These two warning lights illuminate at the same time while driving:
• When the ABS and regular brake system may not work normally.
  In this case, have the vehicle inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

WARNING

■ Electronic Brake force Distribution (EBD) system warning light

(Continued)

When both ABS and Parking Brake & Brake Fluid Warning Lights are on, the brake system will not work normally and you may experience an unexpected and dangerous situation during sudden braking. In this case, avoid high speed driving and abrupt braking. Have the vehicle inspected by a professional workshop as soon as possible. Kia recommends to visit an authorized Kia dealer/service partner.

NOTICE

■ Electronic Brake force Distribution (EBD) system warning light

When the ABS Warning Light is on or both ABS and Parking Brake & Brake Fluid Warning Lights are on, the speedometer, odometer, or tripmeter may not work. Also, the EPS Warning Light may illuminate and (Continued)
Once you set the ignition switch or Engine Start/Stop Button to the ON position.
- It remains on until the engine is started.
- When there is a malfunction with the emission control system. In this case, have the vehicle inspected by a professional workshop as soon as possible. Kia recommends to visit an authorized Kia dealer.

Malfunction Indicator Lamp (MIL)
This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
- When there is a malfunction with the emission control system. In this case, have the vehicle inspected by a professional workshop as soon as possible. Kia recommends to visit an authorized Kia dealer.

CAUTION
Gasoline Engine
If the Malfunction Indicator Lamp (MIL) illuminates, potential catalytic converter damage is possible which could result in loss of engine power. In this case, have the vehicle inspected by a professional workshop as soon as possible. Kia recommends to visit an authorized Kia dealer/service partner.

Charging system warning light
This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop button to the ON position.
- When there is a malfunction with either the alternator or electrical charging system.
Features of your vehicle

If there is a malfunction with either the alternator or electrical charging system:

1. Drive carefully to the nearest safe location and stop your vehicle.
2. Turn the engine off and check the alternator drive belt for looseness or breakage.
   If the belt is adjusted properly, there may be a problem in the electrical charging system.
   In this case, have the vehicle inspected by a professional workshop as soon as possible.
   Kia recommends to visit an authorized Kia dealer/service partner.

Engine oil pressure warning light

This warning light illuminates:

- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It remains on until the engine is started.
- When the engine oil pressure is low.

If the engine oil pressure is low:

1. Drive carefully to the nearest safe location and stop your vehicle.
2. Turn the engine off and check the engine oil level (For more details, refer to “Engine oil” on page 8-23). If the level is low, add oil as required.
   If the warning light remains on after adding oil or if oil is not available, have the vehicle inspected by a professional workshop as soon as possible. Kia recommends to visit an authorized Kia dealer/service partner.

CAUTION

- Engine Oil Pressure Warning Light

  - If the engine does not stop immediately after the Engine Oil Pressure Warning Light is illuminated, severe damage could result.
  - If the warning light stays on while the engine is running, it indicates that there may be serious engine damage or malfunction. In this case,
    1. Stop the vehicle as soon as it is safe to do so.

Low fuel level warning light

This warning light illuminates:

When the fuel tank is nearly empty.

If the fuel tank is nearly empty:
Add fuel as soon as possible.

CAUTION

- Low fuel level

(Continued)
Driving with the Low Fuel Level warning light on or with the fuel level below “0” or “E” can cause the engine to misfire and damage the catalytic converter (if equipped).

Low tire pressure warning light (if equipped)
This warning light illuminates:
• Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
• When one or more of your tires are significantly underinflated.
For more details, refer to “Tire Pressure Monitoring System (TPMS)” on page 7-08.

This warning light remains on after blinking for approximately 60 seconds or repeats blinking and off at the intervals of approximately 3 seconds:
• When there is a malfunction with the TPMS.
In this case, have the vehicle inspected by a professional workshop as soon as possible. Kia recommends to visit an authorized Kia dealer/service partner.
For more details, refer to “Tire Pressure Monitoring System (TPMS)” on page 7-08.

WARNING
Low tire pressure
• Significantly low tire pressure makes the vehicle unstable and can contribute to loss of vehicle control and increased braking distances.
• Continued driving or low pressure tires will cause the tires to overheat and fail.

WARNING
Safe Stopping
• The TPMS cannot alert you to severe and sudden tire damage caused by external factors.
• If you notice any vehicle instability, immediately take your foot off the accelerator pedal, apply the brakes gradually with light force, and slowly move to a safe position off the road.

Door ajar warning light (if equipped)
This warning light illuminates:
When a door is not closed securely.
Trunk (tailgate) Open Warning Light (if equipped)
This warning light illuminates:
When the trunk (tailgate) is not closed securely.
Overspeed warning light (if equipped)

This warning light blinks:
• When you drive the vehicle more than 120 km/h.
  - This is to prevent you from driving your vehicle with overspeed.
  - The overspeed warning chime also sound for approximately 5 seconds.

Washer fluid warning light (if equipped)

This warning light illuminates:
• When the washer fluid level in the reservoir is nearly empty.
In this case, you should refill the washer fluid.

Master Warning Mode (if equipped)

• This warning light informs the driver the following situations
  - Low washer fluid (if equipped)
  - Blind Spot Detection (BSD) malfunction (if equipped)
  - Service reminder and so on.

The Master Warning Light illuminates when more than one of the above warning situations occur. At this time, the LCD Modes Icon will change from (ɔ) to (⚠). If the warning situation is solved, the master warning light will be turned off and the LCD Modes Icon will be changed back to its previous icon (ɔ). (ex : refill the washer fluid)

Fuel filter warning light (diesel engine)

This warning light illuminates:
• Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
• When water has accumulated inside the fuel filter.
In this case, remove the water from the fuel filter.
For more details, refer to “Fuel Filter” on page 8-34.

CAUTION

Fuel Filter Warning Light
• When the Fuel Filter Warning Light illuminates, engine power (vehicle speed & idle speed) may decrease.
• If you keep driving with the warning light on, engine parts (injector, common rail, high pressure fuel pump) may be damaged. If this occurs, have the vehicle inspected by a professional workshop as soon as possible. Kia recommends to visit an authorized Kia dealer/service partner.

Exhaust system (DPF) warning light (diesel engine)

This warning light illuminates:
• When there is a malfunction with Diesel Particulate Filter (DPF) system.
• When this warning light illuminates, it may turn off after driving the vehicle:
  - at more than 60 km/h (37 mph), or
  - at more than 2nd gear with 1500 ~ 2000 engine rpm for a certain time (for about 25 minutes).
If this warning light blinks in spite of the procedure (at this time the LCD warning message will be displayed), have the DPF system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ CAUTION

Diesel Engine with DPF (if equipped)

If you continue to drive with the DPF warning light blinking for a long time, the DPF system can be damaged and fuel consumption can worsen.

Indicator lights

Electronic stability control (ESC) indicator light (if equipped)

This indicator light illuminates:

- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.

- When there is a malfunction with the ESC system.
In this case, have the vehicle inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Immobilizer indicator light (without smart key) (if equipped)

This indicator light illuminates:

- When the vehicle detects the immobilizer in your key properly while the ignition switch is ON.
  - At this time, you can start the engine.
  - The indicator light goes off after starting the engine.

Electronic stability control (ESC) OFF indicator light (if equipped)

This indicator light illuminates:

- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
- When you deactivate the ESC system by pressing the ESC OFF button.

For more details, refer to “Electronic Stability Control (ESC)” on page 6-40.

Immobilizer indicator light (with smart key) (if equipped)

This indicator light illuminates for up to 30 seconds:

- When the vehicle detects the smart key in the vehicle properly while the Engine Start/Stop Button is ACC or ON.
Features of your vehicle

- At this time, you can start the engine.
- The indicator light goes off after starting the engine.

This indicator light blinks for a few seconds:
- When the smart key is not in the vehicle.
- At this time, you cannot start the engine.

This indicator light illuminates for 2 seconds and goes off:
- When the vehicle cannot detect the smart key which is in the vehicle while the Engine Start/Stop Button is ON.
In this case, have the vehicle inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

This indicator light blinks:
- When the battery of the smart key is weak.

- At this time, you cannot start the engine. However, you can start the engine if you press the Engine Start/Stop Button with the smart key. (For more details, refer to “Starting the Engine” on page 6-07).

- The indicator light does not illuminate at all.
- The indicator light does not blink but illuminates.
- The indicator light blinks more rapidly.

Low beam indicator light (if equipped)
This indicator light illuminates:
- When the headlights are on.

High beam indicator light
This indicator light illuminates:
- When the headlights are on and in the high beam position
- When the turn signal lever is pulled into the Flash-to-Pass position.

Light ON indicator light
This indicator light illuminates:
- When the tail lights or headlights are on.

Front fog indicator light (if equipped)
This indicator light illuminates:
- When the front fog lights are on.

Rear fog indicator light (if equipped)
This indicator light illuminates:
- When the rear fog lights are on.
**Cruise indicator light (if equipped)**

This indicator light illuminates:
- When the cruise control system is enabled.

For more details, refer to “Cruise Control System” on page 6–47.

**Cruise SET indicator light (if equipped)**

This indicator light illuminates:
- When the cruise control speed is set.

For more details, refer to “Cruise Control System” on page 6–47.

**KEY OUT indicator light (if equipped)**

When the ENGINE START/STOP button is in the ACC or ON position, if any door is open, the system checks for the smart key.

This indicator light blinks:
- When the smart key is not in the vehicle and any door is open with the ignition switch or Engine Start/Stop button in the ACC or ON position.

- At this time, if you close all doors, the chime will also sound for approximately 5 seconds.
- The indicator will go off while the vehicle is moving.

**SPORT Mode Indicator Light (if equipped)**

This indicator light illuminates:
- When you select “SPORT” mode as drive mode.

For more details, refer to “DRIVE Mode Integrated Control System” on page 6–52.

**ECO Mode Indicator Light (if equipped)**

This indicator light illuminates:
- When you select “ECO” mode as drive mode.

For more details, refer to “DRIVE Mode Integrated Control System” on page 6–52.

**Glow indicator light (diesel engine)**

This indicator light illuminates:
- When the engine is being preheated with the ignition switch or Engine Start/Stop Button in the ON position.
- The engine can be started after the glow indicator light goes off.
- The illumination time varies with the engine coolant temperature, air temperature, and battery condition.

If the indicator light remains on or blinks after the engine has warmed up or while driving, there may be a malfunction with the engine preheating system.

In this case, have the vehicle inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

* **NOTICE**

- Engine preheating

(Continued)
(Continued)

If the engine does not start within 10 seconds after the preheating is completed, set the ignition switch or Engine Start/Stop Button to the LOCK or OFF position for 10 seconds and then to the ON position in order to preheat the engine again.
PARKING ASSIST SYSTEM (IF EQUIPPED)

The parking assist system assists the driver during movement of the vehicle by chiming if any object is sensed within the distance of 100 cm (39.3 in.) in front and 120 cm (47 in.) behind the vehicle.

This system is a supplemental system and it is not intended to nor does it replace the need for extreme care and attention of the driver.

The sensing range and objects detectable by the sensors are limited. Whenever moving pay as much attention to what is in front and behind of you as you would in a vehicle without a parking assist system.

⚠️ WARNING

The parking assist system should only be considered as a supplementary function. The driver must check the front and rear view. The operational function of the parking assist system can be affected by many factors and conditions of the surroundings, so the responsibility rests always with the driver.
• This system activates when the parking assist system button is pressed with the ignition switch ON.

• The indicator of the parking assist system button turns on automatically and activates the parking assist system when you shift the gear to the R (Reverse) position. It will turn off automatically when you drive above 20 km/h (12.4 mph).

• The sensing distance while moving forward is approximately 60 cm (24 in.) when you are driving less than 10 km/h (6.2 mph).

• When more than two objects are sensed at the same time, the closest one will be recognized first.

• If the vehicle speed is above 20 km/h, the system automatically turns off. To activate again, push the button.

* NOTICE

It may not operate if it’s distance from the object is already less than approximately 25 cm when the system is ON.

### NOTICE

- The actual warning sound and indicator may differ from the illustration according to objects or sensor status.
- Do not wash the vehicle's sensor with high pressure water.
CAUTION

• This system can only sense objects within the range and location of the sensors: It cannot detect objects in other areas where sensors are not installed. Also, small or slim objects, such as poles or objects located between sensors may not be detected by the sensors. Always visually check behind the vehicle when backing up.

• Be sure to inform any drivers of the vehicle that may be unfamiliar with the system regarding the systems capabilities and limitations.

Non-operational conditions of parking assist system

Parking assist system may not operate normally when:

1. Moisture is frozen to the sensor (It will operate normally when moisture melts).
2. Sensor is covered with foreign matter, such as snow or water, or the sensor cover is blocked. (It will operate normally when the material is removed or the sensor is no longer blocked).
3. Sensor is stained with foreign matter such as snow or water. (Sensing range will return to normal when removed.)
4. The parking assist button is off.

There is a possibility of parking assist system malfunction when:

1. Driving on uneven road surfaces such as unpaved roads, gravel, bumps, or gradient.
2. Objects generating excessive noise such as vehicle horns, loud motorcycle engines, or truck air brakes can interfere with the sensor.
3. Heavy rain or water spray.
4. Wireless transmitters or mobile phones present near the sensor.
5. Sensor is covered with snow.

Detecting range may decrease when:

1. Outside air temperature is extremely hot or cold.
2. Undetectable objects smaller than 1 m and narrower than 14 cm in diameter.

The following objects may not be recognized by the sensor:

1. Sharp or slim objects such as ropes, chains or small poles.
2. Objects, which tend to absorb sensor frequency such as clothes, spongy material or snow.
**NOTICE**

1. The warning may not sound sequentially depending on the speed and shapes of the objects detected.

2. The parking assist system may malfunction if the vehicle bumper height or sensor installation has been modified. Any non-factory installed equipment or accessories may also interfere with the sensor performance.

3. Sensor may not recognize objects less than 30 cm from the sensor, or it may sense an incorrect distance. Use with caution.

4. When the sensor is frozen or stained with snow or water, the sensor may be inoperative until the stains are removed using a soft cloth.

5. Do not push, scratch or strike the sensor with any hard objects that could damage the surface of the sensor. Sensor damage could occur.

**NOTICE**

This system can only sense objects within the range and location of the sensors, it can not detect objects in other areas where sensors are not installed. Also, small or slim objects, or objects located between sensors may not be detected. Always visually check in front and behind the vehicle when driving. Be sure to inform any drivers in the vehicle that may be unfamiliar with the system regarding the systems capabilities and limitations.

**WARNING**

Pay close attention when the vehicle is driven close to objects on the road, particularly pedestrians, and especially children. Be aware that some objects may not be detected by the sensors, due to the objects distance, size or material, all of which can limit the effectiveness of the sensor. Always perform a visual inspection.

(Continued)

**Self-diagnosis**

When you shift the gear to the R (Reverse) position and if one or more of the below occurs you may have a malfunction in the rear parking assist system.

- You don't hear an audible warning sound or if the buzzer sounds intermittently.

- is displayed. (if equipped)

If this occurs, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
WARNING

Your new vehicle warranty does not cover any accidents or damage to the vehicle or injuries to its occupants related to a parking assist system. Always drive safely and cautiously.
REARVIEW CAMERA (IF EQUIPPED)

The rearview camera will activate when the back-up light is ON with the ignition switch ON and the shift lever in the R (Reverse) position.

* NOTICE

The warning "Warning ! Check surroundings for safety " will appear on the rearview display when the rearview camera is activated.

⚠️ WARNING

- This system is a supplementary function only. It is the responsibility of the driver to always check the inside/outside rearview mirror and the area behind the vehicle before and while backing up because there is a dead zone that can't be seen by the camera.
- Always keep the camera lens clean. If lens is covered with foreign matter, the camera may not operate normally.
The hazard warning flasher should be used whenever you find it necessary to stop the vehicle in a hazardous location. When you must make such an emergency stop, always pull off the road as far as possible. The hazard warning lights are turned on by pushing in the hazard switch. Both turn signal lights will blink. The hazard warning lights will operate even though the key is not in the ignition switch. To turn the hazard warning lights off, push the switch again.
LIGHTING

Battery saver function
- The purpose of this feature is to prevent the battery from being discharged. The system automatically turns off the parking lights when the driver removes the ignition key and opens the driver-side door.
- With this feature, the parking lights will turn off automatically if the driver parks on the side of the road at night. If necessary, to keep the lights on when the ignition key is removed, perform the following:
  1. Open the driver-side door.
  2. Turn the parking lights OFF and ON again using the light switch on the steering column.

Headlight escort function (if equipped)
If you turn the ignition switch to the ACC or OFF position with the headlights ON, the headlights remain on for about 5 minutes. However, if the driver's door is opened and closed, the headlights are turned off after 15 seconds. The headlights can be turned off by pressing the lock button on the transmitter (or smart key) twice or turning the light switch to the OFF position.

Traffic Change (For Europe)
The low beam light distribution is asymmetric. If you go abroad to a country with opposite traffic direction, this asymmetric part will dazzle oncoming car driver. To prevent dazzle, ECE regulation demand several technical solutions (ex. automatic change system, adhesive sheet, down aiming). This headlamps are designed not to dazzle opposite drivers. So, you need not change your headlamps in a country with opposite traffic direction.

Lighting control

The light switch has a Headlight and a Parking light position. To operate the lights, turn the knob at the end of the control lever to one of the following positions:
1. OFF position
2. Position light position
3. Headlight position
4. Auto light position (if equipped)

⚠ CAUTION

If the driver gets out of the vehicle through other doors (except driver's door), the battery saver function does not operate. Therefore, it causes the battery to be discharged. In this case, make sure to turn off the lamp before getting out of the vehicle.
When the light switch is in the parking light position (1st position), the tail, license and instrument panel lights will turn ON.

Headlight position

When the light switch is in the headlight position (2nd position), the head, tail, license and instrument panel lights will turn ON.

*NOTICE*

The ignition switch must be in the ON position to turn on the headlights.

Auto light position (if equipped)

When the light switch is in the AUTO light position, the taillights and headlights will be turned ON or OFF automatically depending on the amount of light outside the vehicle.
**CAUTION**

- Never place anything over the sensor (1) located on the instrument panel. This will ensure better auto-light system control.
- Don’t clean the sensor using a window cleaner. The cleaner may leave a light film which could interfere with sensor operation.
- If your vehicle has window tint or other types of metallic coating on the front windshield, the Auto light system may not work properly.

**High beam operation**

To turn on the high beam headlights, push the lever away from you. Pull it back for low beams. The high beam indicator will light when the headlight high beams are switched on.

To prevent the battery from being discharged, do not leave the lights on for a prolonged time while the engine is not running.

**WARNING**

Do not use high beam when there are other vehicles. Using high beam could obstruct the other driver’s vision.

To flash the headlights, pull the lever towards you. It will return to the normal (low beam) position when released. The headlight switch does not need to be on to use this flashing feature.
Turn signals and lane change signals

The ignition switch must be on for the turn signals to function. To turn on the turn signals, move the lever up or down (A). The green arrow indicators on the instrument panel indicate which turn signal is operating. They will self-cancel after a turn is completed. If the indicator continues to flash after a turn, manually return the lever to the OFF position.

To signal a lane change, move the turn signal lever slightly and hold it in position (B). The lever will return to the OFF position when released.

If an indicator stays on and does not flash or if it flashes abnormally, one of the turn signal bulbs may be burned out and will require replacement.

**One-touch lane change function (if equipped)**

To activate an one-touch lane change function, move the turn signal lever slightly and then release it. The lane change signals will blink 3, 5 or 7 times. You can choose one-touch lane change blinking function in “One touch turn lamp” of “User settings”. Refer to “User settings” on page 4-72.

**NOTICE**

If an indicator flash is abnormally quick or slow, a bulb may be burned out or have a poor electrical connection in the circuit.

Front fog light (if equipped)

Fog lights are used to provide improved visibility when visibility is poor due to fog, rain or snow, etc. The fog lights will turn on when the fog light switch (1) is turned on after the parklight is turned on.

To turn off the fog lights, turn the fog light switch (1) to the OFF position.
**CAUTION**

When in operation, the fog lights consume large amounts of vehicle electrical power. Only use the fog lights when visibility is poor.

**Rear fog light (if equipped)**

To turn the rear fog lights on, turn the headlight switch to the headlight on position and turn the rear fog light switch (1) to the on position. The rear fog lights turn on when the rear fog light switch is turned on after the front fog light switch is turned on and the headlight switch is in the park-light position.

To turn the rear fog lights off, turn the rear fog light switch to the on position again or turn the headlight switch off.

**NOTICE**

To turn on the rear fog light switch, the ignition switch must be in the ON position.

**Daytime running lights (if equipped)**

Daytime Running Lights (DRL) can make it easier for others to see the front of your vehicle during the day. DRL can be helpful in many different driving conditions, and it is especially helpful after dawn and before sunset.

The DRL system will make the headlights light turn OFF when:

1. The headlight switch is ON.
2. The engine is OFF.
3. The front fog light is ON.
4. Engaging the Parking Brake.

**Headlight leveling device (if equipped)**

**Manual type**

To adjust the headlight beam level according to the number of passengers and loading weight in the luggage area, turn the beam leveling switch. The higher the number of the switch position, the lower the headlight beam level. Always keep the headlight beam at the proper leveling position, or headlights may dazzle other road users.
Features of your vehicle

Listed below are the examples of proper switch settings. For loading conditions other than those listed below, adjust the switch position so that the beam level may be the nearest as the condition obtained according to the list.

<table>

WIPERS AND WASHERS

A: Wiper speed control (front)
- 2/HI – High wiper speed
- 1/LO – Low wiper speed
- ---/INT – Intermittent wipe
- O/OFF – Off
- √/MIST – Single wipe

B: Intermittent control wipe time adjustment

C: Wash with brief wipes (front)*

D: Rear wiper/washer control
- ©/ON – Continuous wipe
- ---/INT – Intermittent wipe
- O/OFF – Off

E: Wash with brief wipes (rear)

**Windshield wipers (front)**
Operates as follows when the ignition switch is turned ON.
- √/MIST: For a single wiping cycle, move the lever to this position and release it. The wipers will operate continuously if the lever is held in this position.

*if equipped
In the O (Off) position, pull the lever gently toward you to spray washer fluid on the windshield and to run the wipers 1-3 cycles. Use this function when the windshield is dirty. The spray and wiper operation will continue until you release the lever. If the washer does not work, check the washer fluid level. If the fluid level is not sufficient, you will need to add appropriate non-abrasive windshield washer fluid to the washer reservoir. The reservoir filler neck is located in the front of the engine compartment on the passenger side.

**NOTICE**

If there is heavy accumulation of snow or ice on the windshield, defrost the windshield for about 10 minutes, or until the snow and/or ice is removed before using the windshield wipers to ensure proper operation. If you do not remove the snow and/or ice before using the wiper and washer, it may damage the Wiper and washer system.

**CAUTION**

To prevent possible damage to the washer pump, do not operate the washer when the fluid reservoir is empty.

**WARNING**

Do not use the washer in freezing temperatures without first warming the windshield with the defrosters.
(Continued)

The washer solution could freeze on the windshield and obscure your vision.

⚠️ CAUTION

- To prevent possible damage to the wipers or windshield, do not operate the wipers when the windshield is dry.
- To prevent damage to the wiper blades, do not use gasoline, kerosene, paint thinner, or other solvents on or near them.
- To prevent damage to the wiper arms and other components, do not attempt to move the wipers manually.
- To prevent possible damage to the wipers and washer system, use anti-freezing washer fluids in the winter season or cold weather.

The rear window wiper and washer switch is located at the end of the wiper and washer switch lever. Turn the switch to desired position to operate the rear wiper and washer.

- \( \text{OFF} \) - Normal wiper operation
- \( \text{INT} \) - Intermittent wipe
- \( \text{ON} \) - Wiper is not in operation
Push the lever away from you to spray rear washer fluid and to run the rear wipers 1~3 cycles. The spray and wiper operation will continue until you release the lever.
INTERIOR LIGHT

⚠️ CAUTION

Do not use the interior lights for extended periods when the engine is not running. It may cause battery discharge.

⚠️ WARNING

Do not use the interior lights when driving in the dark. Accidents could happen because the view may be obscured by interior lights.

Automatic turn off function (if equipped)
The interior lights automatically turn off approximately 20 minutes after the ignition switch is turned off.
If your vehicle is equipped with the theft alarm system, the interior lights automatically turns off approximately 5 seconds after the system is armed stage.

Push the lens (1) to turn the map lamp on or off. This light produces a spot beam for convenient use as a map lamp at night or as a personal lamp for the driver and the front passenger.
• DOOR (2) :
  In the DOOR position, the map lamp and the room lamp come on when any door is opened regardless of the ignition switch position.
  When doors are unlocked by the transmitter (or smart key), the map lamp and the room lamp come on for approximately 30 seconds as long as any door is not open. The map lamp and the room lamp goes out gradually after approximately 30 seconds if the door is closed. However, if the ignition switch is ON or all doors are locked, the map lamp and the room lamp will turn off immediately.
• ON (4) :
  Map lamp and room lamp stay on at all times.
• OFF (3) :
  The lights turn off even if a door is opened.
* When the lamp is turned ON by pressing the lens (1), the lamp does not turn off even if the switch is in the OFF position (3).
Room lamp

To turn the room lamp ON or OFF, push the switch.
If your vehicle is not equipped with a map lamp, the room lamp will also turn on or off as follows.
- The room lamp comes on when a door is opened. The lamps go out after approximately 30 seconds.
- The room lamp comes on for approximately 30 seconds when doors are unlocked with a transmitter or smart key as long as the doors are not opened.
- The room lamp will stay on for approximately 20 minutes if a door is opened with the ignition switch in the ACC or LOCK/OFF position.
- The room lamp will stay on continuously if the door is opened with the ignition switch in the ON position.
- The room lamp will go out immediately if the ignition switch is changed to the ON position or all doors are locked.

⚠️ CAUTION

Do not leave the lamp switches on for an extended period of time when the vehicle is not running.

Luggage room lamp

The luggage room lamp comes on when the trunk (tailgate) is opened.
**CAUTION**

The luggage lamp comes on as long as the trunk lid (tailgate) is open. To prevent unnecessary charging system drain, close the trunk lid (tailgate) securely after using the luggage room.

Vanity mirror lamp (if equipped)

- The lamp will turn on if this button is pressed.
- The lamp will turn off if this button is pressed.

**NOTICE**

Turn off the lamp before return the sunvisor to its original position.

Glove box lamp (if equipped)

The glove box lamp comes on when the glove box is opened.
FEATURES OF YOUR VEHICLE

WELCOME SYSTEM (IF EQUIPPED)

Headlamp welcome
When the headlight (light switch in the headlight or AUTO position) is on and all doors (and trunk) are locked and closed, the headlight, position light and tail light will come on for 15 seconds if any of the below is performed.
  • Without smart key system
    - When the door unlock button is pressed on the transmitter.
  • With the smart key system
    - When the door unlock button is pressed on the smart key.

At this time, if you press the door lock button (on the transmitter or smart key), the lights will turn off immediately.

Interior light
When the interior light switch is in the DOOR position and all doors (and trunk) are locked and closed, the room lamp will come on for 30 seconds if any of the below is performed.
  • Without smart key system
    - When the door unlock button is pressed on the transmitter.
  • With the smart key system
    - When the door unlock button is pressed on the smart key.

- When the button of the outside door handle is pressed.

At this time, if you press the door lock button, the lamps will turn off immediately.

Pocket lamp (if equipped)
When all doors are locked and closed, the pocket lamp will come on for 15 seconds if any of the below is performed.
  • With the smart key system
    - When the door unlock button is pressed on the smart key.
    - When the button of the outside door handle is pressed.
    - When the vehicle is approached with the smart key in possession.

At this time, if you press the door lock button, the lamps will turn off immediately.
DEFROSTER

⚠️ CAUTION
To prevent damage to the conductors bonded to the inside surface of the rear window, never use sharp instruments or window cleaners containing abrasives to clean the window.

※ NOTICE
If you want to defrost and defog the front windshield, refer to “Windshield defrosting and defogging” on page 4-130.

Rear window defroster

The defroster heats the window to remove frost, fog and thin ice from the rear window, while the engine is running.
To activate the rear window defroster, press the rear window defroster button located in the center facia switch panel. The indicator on the rear window defroster button illuminates when the defroster is ON.
If there is heavy accumulation of snow on the rear window, brush it off before operating the rear defroster.

The rear window defroster automatically turns off after approximately 20 minutes or when the ignition switch is turned off. To turn off the defroster, press the rear window defroster button again.

Outside rearview mirror defroster (if equipped)
If your vehicle is equipped with the outside rearview mirror defrosters, they will operate at the same time you turn on the rear window defroster.

Wiper deicer (if equipped)
If your vehicle is equipped with the wiper deicer, it will operate at the same time you turn on the rear window defroster.
MANUAL CLIMATE CONTROL SYSTEM (IF EQUIPPED)

1. A/C (Air conditioning) button
2. Fan speed control knob
3. Mode selection knob
4. Rear window defroster button
5. Air intake control button
6. Temperature control knob

⚠️ CAUTION ⚠️

Operating the blower when the ignition switch is in the ON position could cause the battery to discharge. Operate the blower when the engine is running.
1. Start the engine.
2. Set the mode to the desired position.
   For improving the effectiveness of heating and cooling:
   - Heating: 🍁
   - Cooling: 🔥
3. Set the temperature control to the desired position.
4. Set the air intake control to the outside (fresh) air position. (if equipped)
5. Set the fan speed control to the desired speed.
6. If air conditioning is desired, turn the air conditioning system (if equipped) on.
Mode selection

The mode selection knob controls the direction of the air flow through the ventilation system. Air can be directed to the floor, dashboard outlets, or windshield. Five symbols are used to represent Face, Bi-Level, Floor, Floor-Defrost and Defrost air position.

- **Face-Level (B, D, F)**
  Air flow is directed toward the upper body and face. Additionally, each outlet can be controlled to direct the air discharged from the outlet.

- **Bi-Level (B, D, C, E, F)**
  Air flow is directed towards the face and the floor.

- **Floor-Level (A, C, D, E)**
  Most of the air flow is directed to the floor, with a small amount of the air being directed to the windshield and side window defrosters.

- **Floor/Defrost-Level (A, C, D, E)**
  Most of the air flow is directed to the floor and the windshield with a small amount directed to the side window defrosters.

- **Defrost-Level (A, D)**
  Most of the air flow is directed to the windshield with a small amount of air directed to the side window defrosters.

MAX A/C Level

To operate the MAX A/C, turn the mode selection knob to extreme left. Air flow is directed toward the upper body and face. In this mode, the air conditioning and the recirculated air position will be selected automatically.
Instrument panel vents

The outlet vents can be opened or closed separately using the thumb-wheel. Also, you can adjust the direction of air delivery from these vents using the vent control lever as shown.

Temperature control

The temperature control knob allows you to control the temperature of the air flowing from the ventilation system. To change the air temperature in the passenger compartment, turn the knob to the right position for warm and hot air or left position for cooler air.

Air intake control

The air intake control is used to select the outside (fresh) air position or recirculated air position. To change the air intake control position, press the control button.

Recirculated air position

With the recirculated air position selected, air from the passenger compartment will be drawn through the heating system and heated or cooled according to the function selected.
Features of your vehicle

Outside (fresh) air position

With the outside (fresh) air position selected, air enters the vehicle from outside and is heated or cooled according to the function selected.

*NOTICE*

Prolonged operation of the heater in the recirculated air position (without air conditioning selected) may cause fogging of the windshield and side windows and the air within the passenger compartment may become stale.

In addition, prolonged use of the air conditioning with the recirculated air position selected will result in excessively dry air in the passenger compartment.

**WARNING**

- **Continue using the climate control system in the recirculated air position may allow humidity to increase inside the vehicle which may fog the glass and obscure visibility.**
- **Do not sleep in a vehicle with the air conditioning or heating system on. It may cause serious harm or death due to a drop in the oxygen level and/or body temperature.**
- **Continue using the climate control system in the recirculated air position can cause drowsiness or sleepiness, and loss of vehicle control. Set the air intake control to the outside (fresh) air position as much as possible while driving.**

**Fan speed control**

The ignition switch must be in the ON position for fan operation.

The fan speed control knob allows you to control the fan speed of the air flowing from the ventilation system. To change the fan speed, turn the knob to the right for higher speed or left for lower speed.

Setting the fan speed control knob to the “0” position turns off the fan.
To turn off the blowers, turn the fan speed control knob to the “0” position.

Press the A/C button to turn the air conditioning system on (indicator light will illuminate). Press the button again to turn the air conditioning system off.

System operation

Ventilation
1. Set the mode to the position.
2. Set the air intake control to the outside (fresh) air position.
3. Set the temperature control to the desired position.
4. Set the fan speed control to the desired speed.

Heating
1. Set the mode to the position.
2. Set the air intake control to the outside (fresh) air position.
3. Set the temperature control to the desired position.
4. Set the fan speed control to the desired speed.
5. If dehumidified heating is desired, turn the air conditioning system (if equipped) on.
   • If the windshield fogs up, set the mode to the or position.

Operation tips
• To keep dust or unpleasant fumes from entering the vehicle through the ventilation system, temporarily set the air intake control to the recirculated air position. Be sure to return the control to the fresh air position when the irritation has passed to keep fresh air in the vehicle. This will help keep the driver alert and comfortable.
Features of your vehicle

- Air for the heating/cooling system is drawn in through the grilles just ahead of the windshield. Care should be taken that these are not blocked by leaves, snow, ice or other obstructions.
- To prevent interior fog on the windshield, set the air intake control to the fresh air position and fan speed to the desired position, turn on the air conditioning system, and adjust the temperature control to desired temperature.

Air conditioning (if equipped)

Kia Air Conditioning Systems are filled with environmentally friendly refrigerant*1.

1. Start the engine. Push the air conditioning button.
2. Set the mode to the position.
3. Set the air intake control to the outside air or recirculated air position.
4. Adjust the fan speed control and temperature control to maintain maximum comfort.

* NOTICE

- When using the air conditioning system, monitor the temperature gauge closely while driving up hills or in heavy traffic when outside temperatures are high. Air conditioning system operation may cause engine overheating. Continue to use the blower fan but turn the air conditioning system off if the temperature gauge indicates engine overheating.
- When opening the windows in humid weather air conditioning may create water droplets inside the vehicle. Since excessive water droplets may cause damage to electrical equipment, air conditioning should only be used with the windows closed.

Air conditioning system operation tips

- If the vehicle has been parked in direct sunlight during hot weather, open the windows for a short time to let the hot air inside the vehicle escape.
- Use air conditioning to reduce humidity and moisture inside the vehicle on rainy or humid days.
- During air conditioning system operation, you may occasionally notice a slight change in engine speed as the air conditioning compressor cycles. This is a normal system operation characteristic.
- Use the air conditioning system every month only for a few minutes to ensure maximum system performance.
- When using the air conditioning system, you may notice clear water dripping (or even puddling) on the ground under the passenger side of the vehicle. This is a normal system operation characteristic.
- Operating the air conditioning system in the recirculated air position provides maximum cooling, however, continual operation in this mode may cause the air inside the vehicle to become stale.

*1 Your vehicle is filled with R-134a or R-1234yf according to the regulation in your country at the time of producing. You can find out which air conditioning refrigerant is applied your vehicle at the label inside of hood. Refer to “Refrigerant label” on page 9-20.
During cooling operation, you may occasionally notice a misty air flow because of rapid cooling and humid air intake. This is a normal system operation characteristic.

**Climate control air filter**

The climate control air filter installed behind the glove box filters the dust or other pollutants that come into the vehicle from the outside through the heating and air conditioning system. If dust or other pollutants accumulate in the filter over a period of time, the air flow from the air vents may decrease, resulting in moisture accumulation on the inside of the windshield even when the outside (fresh) air position is selected. If this happens, have the climate control air filter replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**NOTICE**

- Replace the filter according to the Maintenance Schedule. If the car is being driven in severe conditions such as dusty, rough roads, more frequent climate control air filter inspections and changes are required.
- When the air flow rate suddenly decreases, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**NOTICE**

It is important that the correct type and amount of oil and refrigerant is used. Otherwise, damage to the compressor and abnormal system operation may occur.
Features of your vehicle

⚠️ WARNING

Have the air conditioning system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner. Improper service may cause serious injury to the person performing the service.

Checking the amount of air conditioner refrigerant and compressor lubricant

When the amount of refrigerant is low, the performance of the air conditioning is reduced. Overfilling also has a bad influence on the air conditioning system. Therefore, if abnormal operation is found, have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ WARNING

- Vehicles equipped with R-134a
  - (Continued)

* Your vehicle is filled with R-134a or R-1234yf according to the regulation in your country at the time of producing. You can find out which air conditioning refrigerant is applied your vehicle at the label inside of hood. Refer to “Refrigerant label” on page 9-20.

⚠️ WARNING

Because the refrigerant is at very high pressure, the air conditioning system should only be serviced by trained and certified technicians. It is important that the correct type and amount of oil and refrigerant is used.

Otherwise, it may cause damage to the vehicle and personal injury.

⚠️ WARNING

Because the refrigerant is mildly inflammable and at very high pressure, the air conditioning system should only be serviced by trained and certified technicians. It is important that the correct type and amount of oil and refrigerant is used.

Otherwise, it may cause damage to the vehicle and personal injury.

(Continued)

(Continued)
AUTOMATIC CLIMATE CONTROL SYSTEM (IF EQUIPPED)

1. Driver’s temperature control knob
2. AUTO (automatic control) button
3. OFF button
4. LCD display
5. Front windshield defrost button
6. Mode selection button
7. Fan speed control button
8. Air intake control button
9. Rear window defrost button
10. Passenger’s temperature control knob
11. SYNC button
12. A/C (Air conditioning) button

⚠️ CAUTION

Operating the blower when the ignition switch is in the ON position could cause the battery to discharge. Operate the blower when the engine is running.
Automatic heating and air conditioning

1. Press the AUTO button. The modes, fan speeds, air intake and air-conditioning will be controlled automatically according to the temperature setting.

2. Turn the temperature control knob to the desired temperature.

*NOTICE*

- To turn the automatic operation off, select any button or switch of the following:
  - Mode selection button

(Continued)

- Front windshield defroster button (Press the button one more time to deselect the front windshield defroster function. The 'AUTO' sign will illuminate on the information display once again.)
- Fan speed control switch

The selected function will be controlled manually while other functions operate automatically.

- For your convenience and to improve the effectiveness of the climate control, use the AUTO button and set the temperature to 22°C/71°F (23°C/73°F - Except Europe).
NOTICE

Never place anything over the sensor located on the instrument panel to ensure better control of the heating and cooling system.

Manual heating and air conditioning

The heating and cooling system can be controlled manually by pressing buttons other than the AUTO button. In this case, the system works sequentially according to the order of buttons selected.

1. Start the engine.

2. Set the mode to the desired position.
3. Set the temperature control to the desired position.
4. Set the air intake control to the outside (fresh) air position.
5. Set the fan speed control to the desired speed.
6. If air conditioning is desired, turn the air conditioning system on.

Press the AUTO button in order to convert to full automatic control of the system.

Mode selection

The mode selection button controls the direction of the air flow through the ventilation system.

The air flow outlet port is converted as follows:

Refer to the illustration in the “Manual climate control system” on page 4-112.
Air flow is directed toward the upper body and face. Additionally, each outlet can be controlled to direct the air discharged from the outlet.

- **Bi-Level**
  Air flow is directed towards the face and the floor.

- **Floor-Level**
  Most of the air flow is directed to the floor, with a small amount of the air being directed to the windshield and side window defrosters.

- **Floor/Defrost-Level**
  Most of the air flow is directed to the floor and the windshield with a small amount directed to the side window defrosters.

**Defrost-Level**

Most of the air flow is directed to the windshield with a small amount of air directed to the side window defrosters.

**Instrument panel vents**

The outlet vents can be opened or closed separately using the thumb-wheel. Also, you can adjust the direction of air delivery from these vents using the vent control lever as shown.
**Temperature control**

The temperature will increase to the maximum (HI) by turning the knob to the extreme right. The temperature will decrease to the minimum (Lo) by turning the knob to the extreme left. When turning the knob, the temperature will increase or decrease by 0.5°C/1°F. When set to the lowest temperature setting, the air conditioning will operate continuously.

**Adjusting the driver and passenger side temperature equally**

- Press the “SYNC” button to adjust the driver and passenger side temperature equally. The passenger side temperature will be set to the same temperature as the driver side temperature.
- Turn the driver side temperature control knob. The driver and passenger side temperature will be adjusted equally.

**Adjusting the driver and passenger side temperature individually**

- Press the “SYNC” button again to adjust the driver and passenger side temperature individually. The illumination of button turns off.
- Operate the driver side temperature control knob to adjust the driver side temperature.
- Operate the passenger side temperature control knob to adjust the passenger side temperature.
Air intake control

This is used to select the outside (fresh) air position or recirculated air position.
To change the air intake control position, push the control button.

Recirculated air position

With the recirculated air position selected, air from the passenger compartment will be drawn through the heating system and heated or cooled according to the function selected.

Outside (fresh) air position

With the outside (fresh) air position selected, air enters the vehicle from outside and is heated or cooled according to the function selected.

* NOTICE

Prolonged operation of the heater in the recirculated air position (without air conditioning selected) may cause fogging of the windshield and side windows and the air within the passenger compartment may become stale.
In addition, prolonged use of the air conditioning with the recirculated air position selected will result in excessively dry air in the passenger compartment.

⚠️ WARNING

- Continue using the climate control system in the recirculated air position may allow humidity to increase inside the vehicle which may fog the glass and obscure visibility.
- Do not sleep in a vehicle with the air conditioning or heating system on. It may cause serious harm or death due to a drop in the oxygen level and/or body temperature.
- Continue using the climate control system in the recirculated air position can cause drowsiness or sleepiness, and loss of vehicle control. Set the air intake control to the outside (fresh) air position as much as possible while driving.
The fan speed can be set to the desired speed by operating the fan speed control switch. To change the fan speed, press ( △ ) the switch for higher speed, or push ( ▽ ) the switch for lower speed. To turn the fan speed control off, press the front blower OFF button.

Press the A/C button to turn the air conditioning system on (indicator light will illuminate). Press the button again to turn the air conditioning system off.

Press OFF button to turn off the air climate control system. However, you can still operate the mode and air intake buttons as long as the ignition switch is in the ON position.
**Climate control air filter**

The climate control air filter installed behind the glove box filters the dust or other pollutants that come into the vehicle from the outside through the heating and air conditioning system. If dust or other pollutants accumulate in the filter over a period of time, the air flow from the air vents may decrease, resulting in moisture accumulation on the inside of the windshield even when the outside (fresh) air position is selected. If this happens, have the climate control air filter replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**NOTICE**

- Replace the filter according to the Maintenance Schedule. If the car is being driven in severe conditions such as dusty, rough roads, more frequent climate control air filter inspections and changes are required.
- When the air flow rate suddenly decreases, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**Checking the amount of air conditioner refrigerant and compressor lubricant**

When the amount of refrigerant is low, the performance of the air conditioning is reduced. Overfilling also has a bad influence on the air conditioning system. Therefore, if abnormal operation is found, have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**WARNING**

- Vehicles equipped with R-134a

Because the refrigerant is at very high pressure, the air conditioning system should only be serviced by trained and certified technicians. It is important that the correct type and amount of oil and refrigerant is used.

Otherwise, it may cause damage to the vehicle and personal injury.

*Your vehicle is filled with R-134a or R-1234yf according to the regulation in your country at the time of producing. You can find out which air conditioning refrigerant is applied your vehicle at the label inside of hood. Refer to “Refrigerant label” on page 9-20.*
WARNING

Vehicles equipped with R-1234yf

Because the refrigerant is mildly flammable and at very high pressure, the air conditioning system should only be serviced by trained and certified technicians. It is important that the correct type and amount of oil and refrigerant is used.

Otherwise, it may cause damage to the vehicle and personal injury.

*Your vehicle is filled with R-134a or R-1234yf according to the regulation in your country at the time of producing. You can find out which air conditioning refrigerant is applied your vehicle at the label inside of hood. Refer to “Refrigerant label” on page 9-20.
Features of your vehicle

WINDSHIELD DEFROSTING AND DEFOGGING

**WARNING**

Windshield heating

Do not use the ❌ or ⬇️ position during cooling operation in extremely humid weather. The difference between the temperature of the outside air and the windshield could cause the outer surface of the windshield to fog up, causing loss of visibility. In this case, set the mode selection to the ⬇️ position and fan speed control to the lower speed.

- For maximum defrosting, set the temperature control to the extreme right/hot position and the fan speed control to the highest speed.
- If warm air to the floor is desired while defrosting or defogging, set the mode to the floor-defrost position.
- Before driving, clear all snow and ice from the windshield, rear window, outside rear view mirrors, and all side windows.

- Clear all snow and ice from the hood and air inlet in the cowl grill to improve heater and defroster efficiency and to reduce the probability of fogging up the inside of the windshield.

4. The outside (fresh) air will be selected automatically. If the ⬆️ position is selected, air conditioning will also be selected automatically.

If the air conditioning and/or outside (fresh) air position are not selected automatically, press the corresponding button manually.

**Manual climate control system**

*To defog inside windshield*

1. Set any fan speed except "0" position.
2. Select desired temperature.
3. Select the ❌ or ⬇️ position.

*To defrost outside windshield*

1. Set the fan speed to the highest position.
2. Set the temperature to the extreme hot position.
3. Select the ⬆️ position.
4. The outside (fresh) air and air conditioning will be selected automatically.

Automatic climate control system

**To defog inside windshield**

1. Set the fan speed to the desired position.
2. Select desired temperature.
3. Press the defroster button (▌).  

4. The air conditioning will turn on according to the detected ambient temperature and outside (fresh) air position will be selected automatically.

If the air conditioning and outside (fresh) air position are not selected automatically, adjust the corresponding button manually. If the ▌ position is selected, lower fan speed is adjusted to a higher fan speed.

**To defrost outside windshield**

1. Set the fan speed to the highest position.
2. Set the temperature to the extreme hot (HI) position.

3. Press the defrost button (▌).  

4. The air-conditioning will turn on according to the detected ambient temperature and outside (fresh) air position will be selected automatically.

If the ▌ position is selected, lower fan speed is controlled to higher fan speed.

**Defogging logic (if equipped)**

To reduce the probability of fogging up the inside of the windshield, the air intake or air conditioning are controlled automatically according to certain conditions such as  或 ▌ position. To cancel or return the defogging logic, do the following.
Manual climate control system

1. Turn the ignition switch to the ON position.
2. Select the defroster position (قاعدة). 
3. Press the air intake control button at least 5 times within 3 seconds.

The indicator on the air intake button blinks 3 times with 0.5 seconds of interval. It indicates that the defogging logic is canceled or returned to the programmed status. 
If the battery has been discharged or disconnected, it resets to the defog logic status.

Automatic climate control system

1. Turn the ignition switch to the ON position.
2. Select the defroster button (قاعدة).
3. While pressing the air conditioning button (A/C), press the air intake control button at least 5 times within 3 seconds.

The indicator on the air intake button blinks 3 times with 0.5 seconds of interval. It indicates that the defogging logic is canceled or returned to the programmed status. 
If the battery has been discharged or disconnected, it resets to the defog logic status.

Auto defogging system (if equipped)

Auto defogging reduces the probability of fogging up the inside of the windshield by automatically sensing the moisture of inside the windshield. 
The auto defogging system operates when the heater or air conditioning is on. 

This indicator illuminates when the auto defogging system senses the moisture of inside the windshield and operates.
If more moisture is in the vehicle, the higher steps operate as follow. For example if auto defogging does not defog inside the windshield at step 1 Outside air position, it tries to defog again at step 2 Blowing air toward the windshield.

Step 1 : Outside air position
Step 2 : Blowing air toward the windshield
Step 3 : Increasing air flow toward the windshield
Step 4 : Operating the air conditioning
Step 5 : Maximizing the air conditioning

⚠️ CAUTION

Do not remove the sensor cover located on the upper end of the driver side windshield glass. Damage to system parts could occur and may not be covered by your vehicle warranty.

⚠️ NOTICE

• When the air conditioning is turned on by Auto defogging system, if you try to turn off the air conditioning, the indicator will blink 3 times and the air conditioning will not be turned off.

• For efficiency, do not select recirculated air position while Auto defogging system is operating.
When the ignition switch is in the ON position, the clean air function turns on automatically. Also, the clean air function turns off automatically, when the ignition switch turns to the OFF position.
STORAGE COMPARTMENT

These compartments can be used to store small items.

⚠️ CAUTION

• To avoid possible theft, do not leave valuables in the storage compartment.
• Always keep the storage compartment covers closed while driving. Do not attempt to place so many items in the storage compartment that the storage compartment cover cannot close securely.

⚠️ WARNING

• Flammable materials
  Do not store cigarette lighters, propane cylinders, or other flammable/explosive materials in the vehicle. These items may catch fire and/or explode if the vehicle is exposed to hot temperatures for extended periods.

Center console storage (if equipped)

To open the center console storage, pull up the lever.

Glove box

To open the glove box, push the button and the glove box will automatically open. Close the glove box after use.

⚠️ WARNING

To reduce the risk of injury in an accident or sudden stop, always keep the glove box door closed while driving.
**CAUTION**

Do not keep food in the glove box for a long time.

**Cool box (if equipped)**

You can keep beverage cans or other items cool in the glove box.

1. Turn on the air conditioning. The temperature of the cool box will change according to the temperature of air conditioning.
2. Turn the knob to the open position.
3. When the cool box is not used, turn the knob to the close position.

**NOTICE**

If some items in the cool box block the vent, the cooling effectiveness of the cool box is reduced.

**WARNING**

Do not put perishable food in the cool box because it may not maintain the necessary consistent temperature to keep the food fresh.

**Sunglass holder (if equipped)**

To open the sunglass holder, press the cover and the holder will slowly open. Place your sunglasses with the lenses facing out. To close the sunglass holder, push it up.
**WARNING**

- Do not keep objects except sunglasses inside the sunglass holder. Such objects can be thrown from the holder in the event of a sudden stop or an accident, possibly injuring the passengers in the vehicle.
- Do not open the sunglass holder while the vehicle is moving. The rear view mirror of the vehicle can be blocked by an opened sunglass holder.
- Do not put the glasses forcibly into a sunglass holder to prevent breakage or deformation of glasses. It may cause personal injury if you try to open it forcibly when the glasses are jammed in holder.

---

**Luggage tray (5 door, if equipped)**

You can place a first aid kit, a reflector triangle, tools, etc. in the box for easy access.

Grasp the strap on the top of the cover and lift it.
Features of your vehicle

INTERIOR FEATURES

Cigarette lighter (if equipped)

For the cigarette lighter to work, the ignition switch must be in the ACC position or the ON position. To use the cigarette lighter, push it all the way into its socket. When the element has heated, the lighter will pop out to the “ready” position. Kia recommends to use parts for replacement from an authorized Kia dealer/service partner.

WARNING

• Do not hold the lighter in after it is already heated because it will overheat.
• If the lighter does not pop out within 30 seconds, remove it to prevent overheating.
• Do not insert foreign objects into the socket of the cigarette lighter. It may damage the cigarette lighter.

CAUTION

The use of plug-in accessories (shavers, hand-held vacuums, and coffee pots, etc.) may damage the socket or cause electrical failure.

Ashtray (if equipped)

To use the ashtray, open the cover. To clean or empty the ashtray, pull it out.

WARNING

■ Ashtray use
• Do not use the vehicle’s ashtrays as waste receptacles.
• Putting lit cigarettes or matches in an ashtray with other combustible materials may cause a fire.
Cup holder

⚠️ WARNING

■ Hot liquids
- Do not place uncovered cups of hot liquid in the cup holder while the vehicle is in motion. If the hot liquid spills, you may burn yourself. Such a burn to the driver could lead to loss of control of the vehicle.
- To reduce the risk of a personal injury in the event of a sudden stop or collision, do not place uncovered or unsecured bottles, glasses, cans, etc., in the cup holder while the vehicle is in motion.

⚠️ WARNING

Keep cans or bottles out of direct sunlight and do not put them in a vehicle that is heated up. It may explode.

※ NOTICE

- Keep your drinks sealed while driving to prevent spilling your drink. If liquid spills, it may get into the vehicle’s electrical/electronic system and damage electrical/electronic parts.
- When cleaning spilled liquids, do not dry the cup holder at high temperature. This may damage the cup holder.

Cups or small beverage cans may be placed in the cup holders.

Sliding armrest (if equipped)

To move forward

Grab the front portion of the armrest (1) then pull it forward

To move rearward

⚠️ WARNING

Do not grab the front portion of the armrest (1) when moving the armrest rearward. It may pinch your fingers.

Push the armrest rearward with your palm.
Seat warmer (if equipped)

- Rear seat

OFF → HIGH ( ) → LOW ( )

- When pressing the switch for more than 1.5 seconds with the seat warmer operating, the seat warmer will turn OFF.
- The seat warmer defaults to the OFF position whenever the engine ignition switch is turned on.

NOTICE

With the seat warmer switch in ON position, the heating system in the seat turns off or on automatically depending on the seat temperature.

CAUTION

- Seat damage
(Continued)
<table>
<thead>
<tr>
<th>(Continued)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• When cleaning the seats, do not use an organic solvent such as paint thinner, benzene, alcohol and gasoline. Doing so may damage the surface of the heater or seats.</td>
</tr>
<tr>
<td>• To prevent overheating the seat warmer, do not place anything on the seats that insulates against heat, such as blankets, cushions or seat covers on the seats while the seat warmer is in operation.</td>
</tr>
<tr>
<td>• Do not place heavy or sharp objects on the seat. Those things may damage the seat warmer system.</td>
</tr>
<tr>
<td>• Be careful not to spill liquid such as water or beverages on the seat. If you spill some liquid, wipe the seat with a dry towel. Before using the seat warmer, dry the seat completely.</td>
</tr>
<tr>
<td>• Do not change the seat cover. It may damage the seat warmer or airventilation system.</td>
</tr>
</tbody>
</table>

**WARNING**

- **Seat warmer burns**
  Passengers should use extreme caution when using seat warmers due to the possibility of excess heating or burns. The occupants must be able to feel if the seat is becoming too warm and to turn the seat warmer off. The seat warmer may cause burns even at low temperatures, especially if used for long periods of time.
  In particular, the driver must exercise extreme care for the following types of passengers:
  1. Infants, children, elderly or disabled persons, or hospital outpatients
  2. Persons with sensitive skin or those that burn easily
  3. Fatigued individuals
  4. Intoxicated individuals
  5. Individuals taking medication that can cause drowsiness or sleepiness (sleeping pills, cold tablets, etc.)

**Air ventilation seat (if equipped)**

The air ventilation is provided to cool the driver’s seat during hot weather by blowing air through small vent holes on the surface of the seat and seat-back. While the engine is running, press the switch to cool the seat. When the operation of the air ventilation is not needed, keep the switches in the OFF position.

- Each time you press the switch, the airflow will change as follows:

  OFF→HIGH(¶)→MIDDLE(¶)→LOW(¶)→OFF
• When pressing the switch for more than 1.5 seconds with the seat cooler operating, the seat cooler will turn OFF.
• When the air ventilation seat is turned on, the seat may get cooler after about 5 minutes.
• Because the air ventilation uses the air in the vehicle, cooling efficiency depends on the temperature of the air. In order to improve cooling efficiency, use the air conditioning system together.
• The air ventilation seat defaults to the OFF position whenever the ignition switch is turned to the ON position.

(Continued)
• Do not place heavy or sharp objects on the seat. Those things may damage the air ventilation seat.
• Be careful not to spill liquid such as water or beverages on the seat. If you spill some liquid, wipe the seat with a dry towel. Before using the air ventilation seat, dry the seat completely.
• Do not change the seat cover. It may damage the seat warmer or air ventilation system.

Sunvisor

Use the sunvisor to shield direct light through the front or side windows. To use the sunvisor, pull it downward. To use the sunvisor for the side window, pull it downward, unsnap it from the bracket (1) and swing it to the side (2). Adjust the sunvisor extension forward or backward (3). To use the vanity mirror, pull down the visor and slide the mirror cover (4). The ticket holder (5) is provided for holding a tollgate ticket. (if equipped)
⚠️ CAUTION

- Vanity mirror lamp (if equipped)

If you use the vanity mirror lamp, turn off the lamp before returning the sunvisor to its original position, otherwise it could result in battery discharge and possible sunvisor damage.

Power outlet

The power outlet is designed to provide power for mobile telephones or other devices designed to operate with vehicle electrical systems. The devices should draw less than 15 amps with the engine running.

⚠️ CAUTION

- Use the power outlet only when the engine is running and remove the accessory plug after use. Using the accessory plug for prolonged periods of time with the engine off could cause the battery to discharge.

- Only use 12V electric accessories which are less than 15A in electric capacity. If not, it could lead to an overheated power outlet or electric wiring in the vehicle and electric systems may malfunction.

- Adjust the air-conditioner or heater to the lowest operating level when using the power outlet.

- Close the cover when not in use. (Continued)
(Continued)

- Some electronic devices can cause electronic interference when plugged into a vehicle’s power outlet. These devices may cause excessive audio static and malfunctions in other electronic systems or devices used in your vehicle.
- Make sure that the electric devices are plugged in securely. If not, it could cause a malfunction of electric systems.
- If you use an electric device with a battery, electric current may flow from the electric device into the vehicle and may cause a malfunction of electric systems. Only use electric devices which could prevent inverse current.

**LCD monitor (clock and outside temperature) (if equipped)**

**WARNING**

Do not adjust the clock while driving. You may lose your steering control and cause an accident that results in severe personal injury or death.

Whenever the battery terminals or related fuses are disconnected, you must reset the time.

When the ignition switch is in the ACC or ON position, the clock buttons operate as follows:

**Hour (1)**
Pressing the H button will advance the time displayed by one hour.

**Minute (2)**
Pressing the M button will advance the time displayed by one minute.

**Display conversion:**
- Clock
  To change the 12 hour format to the 24 hour format, press the "H" and "M" button at the same time for more than 4 seconds. For example, if the time is 10:15 p.m., the display will change to 22:15.
- Outside thermometer
  To change the temperature unit F to C (or C to F) press the "H" and "M" button at the same time for 1 to 2 seconds.
Icy road warning light (if equipped)

This warning light is to warn the driver the road may be icy when:
- Ignition ON
- Temperature range: approximately below 4°C (39.2°F).

This warning light blinks 10 times and then illuminates, and also warning chime sounds 3 times:

* NOTICE

If the icy road warning light appears while driving, you should drive more attentively and safely refraining from over-speeding, rapid acceleration, sudden braking or sharp turning, etc.

Clothes hanger (if equipped)

* This actual feature may differ from the illustration.
To use the hanger, pull down the upper portion of hanger.

⚠️ CAUTION

Do not hang heavy clothes, since those may damage the hook.

⚠️ WARNING

Do not hang other objects such as hangers or hard objects except clothes. Also, do not put heavy, sharp or breakable objects in the cloth pockets. In an accident or when the curtain air bag is inflated, it may cause vehicle damage or personal injury.
Floor mat anchor(s) (if equipped)

When using a floor mat on the front floor carpet, make sure it attaches to the floor mat anchor(s) in your vehicle. This keeps the floor mat from sliding forward.

(Continued)

- Ensure that the floor mats are securely attached to the vehicle's floor mat anchor(s) before driving the vehicle.
- Do not use ANY floor mat that cannot be firmly attached to the vehicle's floor mat anchors.
- Do not stack floor mats on top of one another (e.g. all-weather rubber mat on top of a carpeted floor mat). Only a single floor mat should be installed in each position.

IMPORTANT - Your vehicle was manufactured with driver's side floor mat anchors that are designed to securely hold the floor mat in place. To avoid any interference with pedal operation, Kia recommends that the Kia floor mat designed for use in your vehicle be installed.

Luggage net (holder) (if equipped)

To keep items from shifting in the cargo area, you can use the four holders located in the cargo area to attach the luggage net.

If necessary, Kia recommends to contact an authorized Kia dealer/service partner.

⚠️ CAUTION

To prevent damage to the goods or the vehicle, care should be taken (Continued)
(Continued)
when carrying fragile or bulky objects in the luggage compartment.

**WARNING**

To avoid eye injury, DO NOT overstretched the luggage net. ALWAYS keep your face and body out of the luggage net’s recoil path. DO NOT use the luggage net when the strap has visible signs of wear or damage.

**CAUTION**

- When you return the cargo area cover to its original position, hold the cover and lower it.
- Do not operate the vehicle with the cover removed. It may damage to the cover.
- The cargo area cover may be lifted when the tailgate is opened. Ensure that the luggage on the cover is moved to a safe place.
- Since the cargo area cover may be damaged or malformed, do not apply excessive force to the cover or do not put the heavy loads on it.

Use the cover to hide items stored in the cargo area.
The cargo area cover will be lifted when the tailgate is opened. Disconnect the strap (1) from holder if you want to return the cover to original position. To remove the cargo area cover completely, lift the cover to a 43- degree angle and pull it out to the full (2). For installation of the cover, reverse the removal procedure.

**WARNING**

- Do not place objects on the cargo area cover while driving. Such objects may be thrown about inside the vehicle and possibly injure vehicle occupants during an accident or when braking.

(Continued)
(Continued)

- Never allow anyone to ride in the luggage compartment. It is designed for luggage only.
- Maintain the balance of the vehicle and locate the weight as far forward as possible.

</table>
Your vehicle uses a glass antenna to receive both AM and FM signals.

**CAUTION**

- Do not clean the inside of the rear window glass or quarter glass with a cleaner or use a scraper to remove any foreign deposits as this may cause damage to the antenna elements.
- Avoid adding metallic coating such as Ni, Cd, and so on. These can interfere with AM/FM reception.
- To prevent damage to the rear glass antenna, never use sharp instruments or window cleaner containing abrasives to clean the window. Clean the inside surface of the rear glass window with a piece of soft cloth.
- When putting a sticker on the inside surface of the rear window, be careful not to damage to the rear glass antenna.
- Do not put sharp instruments nearby the rear glass antenna.
- Tinted rear window may affect the proper functioning of the antenna.

Your car uses a roof antenna to receive both AM and FM broadcast signals. This antenna is a removable type. To remove the antenna, turn it counterclockwise. To install the antenna, turn it clockwise.
**CAUTION**

- Before entering a place with a low height clearance or a car wash, remove the antenna by rotating it counterclockwise. If not, the antenna may be damaged.
- When reinstalling your antenna, it is important that it is fully tightened and adjusted to the upright position to ensure proper reception. But it could be removed when parking the vehicle or when loading cargo on the roof rack.
- When cargo is loaded on the roof rack, do not place the cargo near the antenna pole to ensure proper reception.

**Steering wheel audio controls (if equipped)**

The steering wheel audio control button is installed to promote safe driving.

**CAUTION**

Do not operate audio remote control buttons simultaneously.

**VOLUME (VOL + / −) (1)**
- Push up the lever to increase volume.
- Push down the lever to decrease volume.

**SEEK/PRESET (▲ / ▼) (2)**

The SEEK/PRESET button has different functions based on the system mode. For the following functions the button should be pressed for 0.8 seconds or more.

**RADIO mode**

It will function as the AUTO SEEK select button.

**CDP mode**

It will function as the FF/REW button. If the SEEK/PRESET button is pressed for less than 0.8 seconds, it will work as follows in each mode.
RADIO mode
It will function as the PRESET STATION select buttons.

CDP mode
It will function as the TRACK UP/DOWN button.

MODE (3)
Press the button to select Radio, CD (compact disc), AUX, USB or iPod.

MUTE (4)
• Press the MUTE button to cancel the sound.
• Press the MUTE button again to activate the sound.

Detailed information for audio control buttons is described in the following pages in this chapter.

AUX, USB and iPod® port (if equipped)

If your vehicle has an AUX and USB (universal serial bus) port, you can use an AUX port to connect audio devices and an USB port to plug in an USB and an iPod.

* NOTICE

When using a portable audio device connected to the power outlet, noise may occur during playback. If this happens, use the power source of the portable audio device.

* iPod® is a trademark of Apple Inc.
You can use the phone wirelessly by using the Bluetooth® Wireless Technology.
1. Call / Answer button
2. Call end button
3. Microphone

Detailed information for the Bluetooth® Wireless Technology hands-free is described in the manual supplied separately.

How vehicle audio works

AM and FM radio signals are broadcast from transmitter towers located around your city. They are intercepted by the radio antenna on your vehicle. This signal is then received by the radio and sent to your vehicle speakers. When a strong radio signal has reached your vehicle, the precise engineering of your audio system ensures the best possible quality reproduction. However, in some cases the signal coming to your vehicle may not be strong and clear. This can be due to factors, such as the distance from the radio station, closeness of other strong radio stations or the presence of buildings, bridges or other large obstructions in the area.
AM broadcasts can be received at greater distances than FM broadcasts. This is because AM radio waves are transmitted at low frequencies. These long, low frequency radio waves can follow the curvature of the earth rather than travelling straight out into the atmosphere. In addition, they curve around obstructions so that they can provide better signal coverage.

AM reception

FM radio station

FM broadcasts are transmitted at high frequencies and do not bend to follow the earth’s surface. Because of this, FM broadcasts generally begin to fade at short distances from the station. Also, FM signals are easily affected by buildings, mountains, or other obstructions. These can result in certain listening conditions which might lead you to believe a problem exists with your radio. The following conditions are normal and do not indicate radio trouble:

- Fading - As your vehicle moves away from the radio station, the signal will weaken and sound will begin to fade. When this occurs, we suggest that you select another stronger station.

- Flutter/Static - Weak FM signals or large obstructions between the transmitter and your radio can disrupt the signal causing static or fluttering noises to occur. Reducing the treble level may lessen this effect until the disturbance clears.
• Station Swapping – As a FM signal weakens, another more powerful signal near the same frequency may begin to play. This is because your radio is designed to lock onto the clearest signal. If this occurs, select another station with a stronger signal.

• Multi-Path Cancellation – Radio signals being received from several directions can cause distortion or fluttering. This can be caused by a direct and reflected signal from the same station, or by signals from two stations with close frequencies. If this occurs, select another station until the condition has passed.

**Using a cellular phone or a two-way radio**
When a cellular phone is used inside the vehicle, noise may be produced from the audio system. This does not mean that something is wrong with the audio equipment. In such a case, use the cellular phone at a place as far as possible from the audio equipment.

**CAUTION**
When using a communication system such as a cellular phone or a radio set inside the vehicle, a separate external antenna must be fitted. When a cellular phone or a radio set is used with an internal antenna alone, it may interfere with the vehicle’s electrical system and adversely affect safe operation of the vehicle.

**WARNING**
Do not use a cellular phone while driving. Stop at a safe location to use a cellular phone.
Audio system

Audio (without touch screen)

- Type A-1
- Type A-2

(With Bluetooth® Wireless Technology)
Feature of your audio

1. **EJECT**
   - Ejects the disc.

2. **RADIO (Type A-1)**
   - Changes to FM/AM mode.
     - Each time the button is pressed, the mode is changed in the order of FM1 → FM2 → FMA → AM → AMA.

3. **MEDIA**
   - Changes to CD, USB(iPod®), AUX, My Music™, BT (Bluetooth®) Audio™ mode.

4. **PHONE (Type A-1)**
   - Operates Phone Screen.
     - When a phone is not connected, the connection screen is displayed.

5. **SEEK TRACK**
   - Radio mode : Automatically searches for broadcast frequencies.
     - CD, USB, iPod®, My Music™ mode
       - Shortly press the button : Moves to next or previous song (file).
       - Press and hold the button : Rewinds or fast-forwards the current song.
     - Bluetooth® Audio mode™ : Moves to next or previous song (file).
       - The Play/Pause feature may operate differently depending on the mobile phone.

6. **POWER/VOL knob**
   - Power knob : Turns power On/Off by pressing the knob.

7. **[1] ~ [6] (Preset)**
   - Radio mode : Saves frequencies (channels) or receives saved frequencies (channels).
     - CD, USB, iPod®, My Music™ mode
       - [RPT] : Repeat
       - [RDM] : Random

   In the Radio, Media, Setup, and Menu pop up screen, the number menu is selected.

8. **DISP**
   - Volume knob : Sets volume by turning the knob left/right.

*1 if equipped
• Each time the button is shortly pressed, sets Screen Off \(\rightarrow\) Screen On \(\rightarrow\) Screen Off.
• Audio operation is maintained and only the screen will be turned Off.
• In the Screen Off state, press any button to turn the Screen On again.

9. TA/SCAN
• Radio mode
  - Shortly press the button : TA On/Off.
  - Press and hold the button : Previews each broadcast for 5 seconds each.
• CD, USB, My Music*1 mode
  - Press and hold the button : Previews each song (file) for 10 seconds each.
  - Press and hold the button again to continue listening to the current song (file).

*1 if equipped

10. SETUP
• Shortly press the button : Moves to the Display, Sound, Phone, System setting modes.

11. MENU
• Displays menus for the current mode.
  • iPod® List : Move to parent category.

12. FOLDER
• MP3 CD/USB mode : Folder Search.

13. TUNE knob
• Radio mode : Changes frequency by turning the knob left/right.
• CD, USB, iPod®, My Music*1 mode : Searches songs (files) by turning the knob left/right. When the desired song is displayed, press the knob to play the song.

*1 if equipped

14. FM (Type A-2)
• Changes to FM mode.
  • Each time the button is pressed, the mode changed in order of FM1 \(\rightarrow\) FM2 \(\rightarrow\) FMA.

15. AM (Type A-2)
• Changes to AM \(\rightarrow\) AMA mode.

*1 if equipped

14. FM (Type A-4)
• Changes to FM mode.
  • Each time the button is pressed, the mode changed in order of FM1 ➔ FM2.

15. AM (Type A-4)
• Changes to AM mode.
**NOTICE**

- **Using Compact Discs**
  - If the temperature inside the car is too high, open the car windows to ventilate before using the system.
  - It is illegal to copy and use MP3/WMA files without permission. Use CDs that are created only by lawful means.
  - Do not apply volatile agents, such as benzene and thinner, normal cleaners and magnetic sprays made for audio cassettes onto CDs.
  - To prevent the disc surface from getting damaged, hold CDs by the edges or the center hole only.
  - Clean the disc surface with a piece of soft cloth before playback (wipe it from the center to the outside edge).

(Continued)

- Do not damage the disc surface or attach pieces of sticky tape or paper.
- Make certain only CDs are inserted into the CD player (Do not insert more than one CD at a time).
- Keep CDs in their cases after use to protect them from scratches or dirt.
- Depending on the type of CDR/CD-RW CDs, certain CDs may not operate normally depending on manufacturing company or recording methods.

(Continued)

- that inabilities to properly play a copy protected CD may indicate that the CD is defective, not the CD player.

**NOTE:**
- Order of playing files (folders):
  1. Song playing order: 1 to 14 sequentially.
  2. Folder playing order:

**NOTICE**

- **Playing an Incompatible Copy Protected Audio CD**

Some copy protected CDs, which do not comply with international audio CD standards (Red Book), may not play on your car audio. Please note

(Continued)
**WARNING**

Audio System Safety Warnings

- Do not stare at the screen while driving. Staring at the screen for prolonged periods of time could lead to traffic accidents.
- Do not disassemble, assemble, or modify the audio system. Such acts could result in accidents, fire, or electric shock.
- Using the phone while driving may lead to a lack of attention of traffic conditions and increase the likelihood of accidents. Use the phone feature after parking the vehicle.
- Exercise caution not to spill water or introduce foreign objects into the device. Such acts could lead to smoke, fire, or product malfunction.
- Please refrain from use if the screen is blank or no sound can be heard as these signs may indicate product malfunction. Continued use in such conditions could lead to accidents (fires, electric shock) or product malfunctions.

(Continued)

- Do not touch the antenna during thunder or lightning as such acts may lead to lightning induced electric shock.
- Do not stop or park in parking-restricted areas to operate the product. Such acts could lead to traffic accidents.
- Use the system with the vehicle ignition turned on. Prolonged use with the ignition turned off could result in battery discharge.

**WARNING**

Distracted Driving

Driving while distracted can result in a loss of vehicle control that may lead to an accident, severe personal injury, and death. The driver’s primary responsibility is in the safe and legal operation of a vehicle, and use of any handheld devices, other equipment, or vehicle systems which take the driver’s eyes, attention and focus away from the safe operation of a vehicle or which are not permitted.
Audio system

(Continued)
sible by law should never be used during operation of the vehicle.

(Continued)

**CAUTION**

- Operating the device while driving could lead to accidents due to a lack of attention to external surroundings. First park the vehicle before operating the device.
- Adjust the volume to levels that allow the driver to hear sounds from outside of the vehicle. Driving in a state where external sounds cannot be heard may lead to accidents.
- Pay attention to the volume setting when turning the device on. A sudden output of extreme volume upon turning the device on could lead to hearing impairment. (Adjust the volume to a suitable levels before turning off the device.)

(Continued)

- If you want to change the position of device installation, please inquire with your place of purchase or service maintenance center. Technical expertise is required to install or disassemble the device.
- Turn on the car ignition before using this device. Do not operate the audio system for long periods of time with the ignition turned off as such operations may lead to battery discharge.
- Do not subject the device to severe shock or impact. Direct pressure onto the front side of the monitor may cause damage to the LCD or touch screen.
- When cleaning the device, make sure to turn off the device and use a dry and smooth cloth. Never use tough materials, chemical cloths, or solvents (alcohol, benzene, thinners, etc.) as such materials may damage the device panel or cause color/quality deterioration

(Continued)

- Do not place beverages close to the audio system. Spilling beverages may lead to system malfunction.
- In case of product malfunction, please contact your place of purchase or After Service center.
- Placing the audio system within an electromagnetic environment may result in noise interference.

**NOTICE**

- **Using the USB device**
  - To use an external USB device, make sure the device is not connected when starting up the vehicle. Connect the device after starting up.
  - If you start the engine when the USB device is connected, it may damage the USB device. (USB flashdrives are very sensitive to electric shock.)

(Continued)
If the engine is started up or turned off while the external USB device is connected, the external USB device may not work.

- The System may not play authentic MP3 or WMA files.
  - It can only play MP3 files with the compression rate between 8Kbps ~ 320Kbps.
  - It can only play WMA music files with the compression rate between 8Kbps ~ 320Kbps.

- Take precautions for static electricity when connecting or disconnecting the external USB device.

- An encrypted MP3 PLAYER is not recognizable.

- Depending on the condition of the external USB device, the connected external USB device can be unrecognizable.

When the formatted byte/sector setting of External USB device is not either 512BYTE or 2048BYTE, then the device will not be recognized.

- Use only a USB device formatted to FAT 12/16/32.

- USB devices without USB I/F authentication may not be recognizable.

- Make sure the USB connection terminal does not come in contact with the human body or other objects.

- If you repeatedly connect or disconnect the USB device in a short period of time, it may break the device.

- You may hear a strange noise when connecting or disconnecting a USB device.

If you disconnect the external USB device during playback in USB mode, the external USB device can be damaged or may malfunction. Therefore, disconnect the external USB device when the audio is turned off or in another mode (e.g. Radio, CD)

- Depending on the type and capacity of the external USB device or the type of files stored in the device, there is a difference in the time taken for recognition of the device.

- Do not use the USB device for purposes other than playing music files.

- Playing videos through the USB is not supported.

- Use of USB accessories such as rechargers or heaters using USB I/F may lower performance or cause trouble.

Audio system
Audio system

(Continued)

• If you use devices such as a USB hub purchased separately, the vehicle’s audio system may not recognize the USB device. In that case, connect the USB device directly to the multimedia terminal of the vehicle.

• If the USB device is divided by logical drives, only the music files on the highest-priority drive are recognized by car audio.

• Devices such as MP3 Player/Cellular phone/Digital camera can be unrecognizable by standard USB I/F.

• Charging through the USB may not be supported in some mobile devices.

• USB HDD or USB types liable to connection failures due to vehicle vibrations are not supported. (i-stick type)

• Some non-standard USB devices (METAL COVER TYPE USB) can be unrecognizable.

(Continued)

(Continued)

• Some USB flash memory readers (such as CF, SD, micro SD, etc.) or external-HDD type devices can be unrecognizable.

• Music files protected by DRM (DIGITAL RIGHTS MANAGEMENT) are not recognizable.

• The data in the USB memory may be lost while using this audio. Always back up important data on a personal storage device.

• Please avoid using USB memory products which can be used as key chains or cellular phone accessories as they could cause damage to the USB jack.

Please make certain only to use plug type connector products.

* NOTICE

■ Using the iPod® device

• Some iPod® models may not support communication protocol and files may not properly play. Supported iPod® models:
  - iPhone® 3GS/4
  - iPod® touch 1st-4th generation
  - iPod® nano 1st-6th generation
  - iPod® classic

• The order of search or playback of songs in the iPod® can be different from the order searched in the audio system.

• If the iPod® disabled due to its own malfunction, reset the iPod®. (Reset : Refer to iPod® manual)

• An iPod® may not operate normally on low battery.

(Continued)
Some iPod® devices, such as the iPhone®, can be connected through the Bluetooth® Wireless Technology interface. The device must have audio Bluetooth® Wireless Technology capability (such as for stereo headphone Bluetooth® Wireless Technology). The device can play, but it will not be controlled by the audio system.

To use iPod® features within the audio, use the cable provided upon purchasing an iPod® device.

Skipping or improper operation may occur depending on the characteristics of your iPod®/iPhone® device.

If your iPhone® is connected to both the Bluetooth® Wireless Technology and USB, the sound may not be properly played. In your iPhone®, select the Dock connector or Bluetooth® Wireless Technology to change the sound output (source).

When connecting iPod® with the iPod® Power Cable, insert the connector to the multimedia socket completely. If not inserted completely, communications between iPod® and audio may be interrupted.

When adjusting the sound effects of the iPod® and the audio system, the sound effects of both devices will overlap and might reduce or distort the quality of the sound.

Deactivate (turn off) the equalizer function of an iPod® when adjusting the audio system’s volume, and turn off the equalizer of the audio system when using the equalizer of an iPod®.

When not using iPod® with car audio, detach the iPod® cable from iPod®. Otherwise, iPod® may remain in accessory mode, and may not work properly.

Use an iPod®/iPhone® USB cable shorter than 1 meter in length, longer cables cannot be recognized.

**NOTICE**

- Using the Bluetooth® Wireless Technology Cellular Phone
  - Bluetooth® Wireless Technology Handsfree refers to a device which allows the user to conveniently make phone calls with Bluetooth® Wireless Technology mobile phones through the audio system.
Audio system (Continued)

• Bluetooth® Wireless Technology allows devices to be connected in a short distance, including handsfree devices, stereo headsets, wireless remote controllers, etc. For more information, visit the Bluetooth® Wireless Technology website at www.bluetooth.com. Before using Bluetooth® Wireless Technology audio features.

• The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Kia is under license. Other trademarks and trade names are those of their respective owners. A Bluetooth® enabled cell phone is required to use Bluetooth® Wireless Technology.

• Bluetooth®

Wireless Technology features supported within the vehicle are as follows. Some features may not be supported depending on your Bluetooth® Wireless Technology device.

- Answering and placing Bluetooth® Wireless Technology Handsfree calls
- Menu operation during call (Switch to Private, Switch to call waiting, Outgoing volume)
- Download Call History
- Download Mobile Phone book
- Phone book/Call History Auto Download
- Bluetooth® Wireless Technology device auto connection
- Bluetooth® Wireless Technology Audio

(Continued)

(Continued)

• Before using Bluetooth® Wireless Technology related features of the audio system, refer your phone’s User’s Manual for phone–side Bluetooth® Wireless Technology operations.

• The phone must be paired to the audio system to use Bluetooth® Wireless Technology related features.

• Pairing and connecting a Bluetooth® Wireless Technology enabled mobile phone will work only when the Bluetooth® Wireless Technology option within your mobile phone has been turned on. (Methods of turning on the Bluetooth® Wireless Technology enabled feature may differ depending on the mobile phone.)

• Do not use a cellular phone or perform Bluetooth® Wireless Technology settings (e.g. pairing a phone) while driving.
(Continued)
• Even if the phone supports Bluetooth® Wireless Technology, the phone will not be found during device searches if the phone has been set to hidden state or the Bluetooth® Wireless Technology power is turned off. Disable the hidden state or turn on the Bluetooth® Wireless Technology power prior to searching/connecting with the car audio system.
• You will not be able to use the hands-free feature when your phone (in the car) is outside of the cellular service area (e.g. in a tunnel, in an underground location, in a mountainous area, etc.).
• If the cellular phone signal is poor or the vehicle’s interior noise is too loud, it may be difficult to hear the other person’s voice during a call.
(Continued)
(Continued)
• Do not place the phone near or inside metallic objects, otherwise communications with Bluetooth® Wireless Technology system or cellular service stations can be disturbed.
• Placing the audio system within an electromagnetic environment may result in noise interference.
• Some cellular phones or other devices may cause interference noise or a malfunction to the audio system. In this case, storing the device in a different location may resolve the condition.
• While a phone is connected through Bluetooth® Wireless Technology your phone may discharge quicker than usual for additional Bluetooth® Wireless Technology-related operations.
• If Priority is set upon vehicle ignition (IGN/ACC ON), the Bluetooth® Wireless Technology phone will be automatically connected. Even if you are outside, the Bluetooth® Wireless Technology phone will be automatically connected once you are in the vicinity of the vehicle. If you do not want to automatically connect your Bluetooth® Wireless Technology phone, try the following.
  1. Turn off the Bluetooth® Wireless Technology feature in your mobile phone.
  2. Turn off the Bluetooth® Wireless Technology feature in your car audio system.
  - To turn off the Bluetooth® Wireless Technology feature in your car audio system, go to [SETUP] > [Phone] and [turn off] the Bluetooth® Wireless Technology feature.
• Bluetooth®
  Wireless Technology connection may become intermittently dis-
connected in some mobile phones. Follow these steps to try again.
1. Turn the Bluetooth® Wireless Technology function within the mobile phone off/on and try again.
2. Turn the mobile phone power Off/On and try again.
3. Completely remove the mobile phone battery, reboot, and then try again.
4. Reboot the audio system and try again.
5. Delete all paired devices, pair and try again.

- It is possible to pair up to five Bluetooth® Wireless Technology devices to the car system.
- Phone contact names should be saved in English or they may not be displayed correctly.
- The Handsfree call volume and quality may differ depending on the mobile phone.

(Continued)

(Continued)

- Only one Bluetooth® Wireless Technology device can be connected at a time.
- In some mobile phones, starting the ignition while talking through Bluetooth® Wireless Technology enabled handsfree call will result in the call becoming disconnected. (Switch the call back to your mobile phone when starting the ignition.)
- If the mobile phone is not paired or connected, it is not possible to enter Phone mode. Once a phone is paired or connected, the guidance screen will be displayed.

⚠️ CAUTION ⚠️

- Bluetooth® Wireless Technology Handsfree is a feature that enables drivers to practice safe driving. Connecting the car audio system with a Bluetooth® Wireless Technology phone allows the user to conveniently make calls, receive calls, and manage the phone book. Before using the Bluetooth® Wireless Technology, carefully read the contents of this user’s manual.
- Excessive use or operations while driving may lead to negligent driving practices and be the cause of accidents.
- Do not operate the device excessively while driving.
- Viewing the screen for prolonged periods of time while driving is dangerous and may lead to accidents.
- When driving, view the screen only for short periods of time.
**NOTICE**

- Using the Voice Recognition (if equipped)
  - The voice recognition feature of this product supports recognition of the commands listed within this user’s manual.
  - While using voice recognition, operating the steering wheel controls or the device will terminate voice recognition and allow you to manually operate desired functions.
  - Position the microphone above the head of the driver’s seat. For superior performance, maintain good posture when saying voice commands.
  - Voice recognition may not function properly due to outside noise. The following conditions can affect the performance of Voice Recognition:
    - When the windows and sunroof are open

(Continued)

- When the heating/cooling system is on
- When passing a tunnel
- When driving on rugged and uneven roads
- After downloading Bluetooth® Wireless Technology phone book, the system requires some times to convert the phone book into voice information. During this time, voice recognition may not operate properly.
- Upon inputting your phone book, special symbols and numbers cannot be recognized by voice. For example, “# John Doe%&” will be recognized as “John Doe”.

(Continued)

**Radio Mode (Type A-1, Type A-2 with RDS)**

*With the Radio Mode Button*

![Radio Mode Example](image)

**SEEK**

- Press the [SEEK TRACK] button.
  - Shortly pressing the button : Changes the frequency.
  - Pressing and holding the button : Automatically searches for the next frequency.
  - When the button is released, automatically searches for the next frequency from that point.

**Preset SEEK**

  - Shortly pressing the button : Plays the frequency saved in the corresponding button.
• Pressing and holding the button: Pressing and holding the desired button from [1] ~ [6] will save the currently playing broadcast to the selected button and sound a BEEP.

SCAN
Press the [TA/SCAN] button.
• Pressing and holding the button: The broadcast frequency increases and previews each broadcast for 5 seconds each. After scanning all frequencies, returns and plays the current broadcast frequency.

Selecting through manual search
Turn the TUNE knob left/right to adjust the frequency.

Traffic Announcement (TA)

Within [MENU] button are the AST (Auto Store) and Info functions.

MENU : Radio

AST (Auto Store) : [1] Button
Select AST (Auto Store) to save frequencies with superior reception to presets [1] ~ [6]. If no frequencies are received, then the most recently received frequency will be broadcast. Saves only to the Preset memory [1] ~ [6] of FMA or AMA mode.

AF (Alternative Frequency) : [2] Button
The Alternative Frequency option can be turned On/Off.

Region : [3] Button
The Region option can be turned On/Off.

The News option can be turned On/Off.

Radio Mode (Type A-3, Type A-4)

With the Radio Mode Button

SEEK
Press the [SEEK TRACK] button
• Shortly pressing the button: Changes the frequency.
• Pressing and holding the button: Automatically searches for the next frequency.

Preset SEEK
Press the [1] ~ [6] button
• Shortly pressing the button: Plays the frequency saved in the corresponding button.
• Pressing and holding the button: Pressing and holding the desired button from [1] ~ [6] will save the currently playing broadcast to the selected button and sound a BEEP.
SCAN
Press the [SCAN] button
• Shortly pressing the button: The broadcast frequency increases and previews each broadcast for 5 seconds each. After scanning all frequencies, returns and plays the current broadcast frequency.
• Pressing and holding the button: Previews the broadcasts saved in Preset [1] ~ [6] for 5 seconds each.

Selecting through manual search
Turn the TUNE knob left/right to adjust the frequency.

MENU: Radio

Within [MENU] button is the AST (Auto Store).

Select A. Store (Auto Store) to save frequencies with superior reception to presets [1] ~ [6]. If no frequencies are received, then the most recently received frequency will be broadcast.

Media Mode
With the Media Mode Button
Press the [MEDIA] button to change the mode in order of CD → USB(iPod®) → AUX → My Music*1 → BT Audio*1.
The folder/file name is displayed on the screen.

• Audio CD Mode

• MP3 CD Mode

• USB Mode

• My Music Mode

The CD is automatically played when a CD is inserted.
The USB music is automatically played when a USB is connected.

*1 if equipped
Repeat
While song (file) is playing \(\uparrow\) [RPT] button
Audio CD, MP3 CD, USB, iPod\textsuperscript{1}, My Music\textsuperscript{1} mode : RPT on screen
- To repeat one song (Shortly pressing the button) : Repeats the current song.

MP3 CD, USB mode : FLD.RPT on screen
- To repeat folder (press the button twice) : repeats all files within the current folder.

Press the [RPT] button again to turn off repeat.

Random
While song (file) is playing \(\uparrow\) [RDM] button
Audio CD, My Music\textsuperscript{1} mode : RDM on screen
- Random (Shortly pressing the button) : Plays all songs in random order.

MP3 CD, USB mode : FLD.RDM on screen
- Folder Random (Shortly pressing the button) : Plays all files within the current folder in random order.

\textsuperscript{1} if equipped

MP3 CD, USB mode : ALL RDM on screen
- Random (press the button twice) : Plays all files in random order.

iPod\textsuperscript{0} mode : RDM on screen
- Random (Shortly pressing the button) : Plays all files in random order.

Press the [RDM] button again to turn off random.

Changing Song/ File
While song (file) is playing \(\uparrow\) [SEEK TRACK \(\uparrow\downarrow\)] button
- Shortly pressing the button : Plays the current song from the beginning.

If the [SEEK TRACK \(\uparrow\downarrow\)] button is pressed again within 1 second, the previous song is played.
- Pressing and holding the button : Rewinds the song.

While song (file) is playing \(\uparrow\) [SEEK TRACK \(\uparrow\downarrow\)] button
- Shortly pressing the button : Plays the next song.
- Pressing and holding the button : Fast forwards the song.

Scan (With RDS)
- Pressing and holding the [TA/ SCAN] button : Scans all songs for 10 seconds starting from the next song.
- Pressing and holding the [TA/ SCAN] button again to turn off.
- The SCAN function is not supported in iPod\textsuperscript{0} mode.

Scan (Without RDS)
- Shortly pressing the [SCAN] button : Scans all songs from the next song for 10 seconds each.
- Press the [SCAN] button again to turn off.
- The SCAN function is not supported in iPod\textsuperscript{0} mode.

Folder Search (Only MP3 CD, USB mode)
While file is playing \(\uparrow\) [FOLDER \(\uparrow\downarrow\)] button
- Searches the next folder.

While file is playing \(\uparrow\) [FOLDER \(\uparrow\downarrow\)] button
- Searches the parent folder.

If a folder is selected by pressing the TUNE knob, the first file within the selected folder will be played.
Searching Songs/Files
- Turning TUNE knob: Searches for songs (files).
- Pressing TUNE knob: Plays selected song (file).

**MENU : Audio CD**

Press the Audio CD mode [MENU] button to set the Repeat, Random, Information features.

Repeat: [1] Button
Repeat the current song.
Press RPT again to turn off.

Randomly play songs within the CD.
Press RDM again to turn off.

Information: [3] Button
Display information of the current song.

Press the MP3 CD / USB mode [MENU] button to set the Repeat, Folder Random, Folder Repeat, All Random, Information and Copy features.

Repeat: [1] Button
Repeat the current song.
Press RPT again to turn off.

Folder Random: [2] Button
Randomly play songs within the current folder.
Press F.RDM again to turn off.

Folder Repeat: [3] Button
Repeat songs within the current folder.
Press F.RPT again to turn off.

All Random: [4] Button
Randomly play all songs within the CD/USB.
Press A.RDM again to turn off.

Information: [5] Button
Display information of the current song.
Press the [MENU] button to turn off info display.

Copy: [6] Button (if equipped)
This is used to copy the current song into My Music. You can play the copied Music in My Music mode.
If another button is pressed while copying is in progress, a pop up asking you whether to cancel copying is displayed.
If another media is connected or inserted (USB, CD, iPod®, AUX) while copying is in progress, copying is canceled.
Music will not be played while copying is in progress.
**MENU : iPod®**

In iPod® mode, press the [MENU] button to set the Repeat, Random, Information and Search features.

**Repeat : [1] Button**
Repeat the current song. Press RPT again to turn repeat off.

Plays all songs within the currently playing category in random order. Press RDM again to turn off.

**Information : [3] Button**
Displays information for the current song. Press the [MENU] button to turn off info display.

**Search : [4] Button**
Displays iPod® category list.

While in iPod® category sublists, press the [MENU] button to move up to the parent category.

**MENU : AUX**

- **Type A-1, Type A-2**

[AUX Connected]

- **Type A-3, Type A-4**

[AUX Connected]

AUX is used to play external MEDIA currently connected with the AUX terminal. AUX mode will automatically start when an external device is connected with the AUX terminal. If an external device is connected, you can also press the [MEDIA] button to change to AUX mode.

AUX mode cannot be started unless there is an external device connected to the AUX terminal.

**NOTICE**

- **Using the AUX**
  Fully insert the AUX cable into the AUX terminal for use.

**MENU : My Music (if equipped)**

In My Music mode, press the [MENU] button to set the Repeat, Random, Information, Delete, Delete All and Delete Selection features.

**Repeat : [1] Button**
Repeats the currently playing song. Press RPT again to turn repeat off.
Plays all songs in random order.
Press RDM again to turn random off.

Information : [3] Button
Displays information for the current song.
Press the [MENU] button to turn off info display.

Delete : [4] Button
- Deletes currently playing file
  In the play screen, pressing delete will delete the currently playing song.
- Deletes file from list
  1. Select the file you wish to delete by using the TUNE knob.
  2. Press the [MENU] button and select [Delete] from the menu to delete the selected file.

Delete All : [5] Button
Deletes all songs of My Music.

Delete Selection : [6] Button
Songs within My Music are selected and deleted.

1. Select the songs you wish to delete from the list.

2. After selecting, press [MENU] button and select [Delete] from the menu.

* NOTICE
- Using the My Music

(Continued)

- Even if memory is available, a maximum of 6,000 songs can be stored.
- The same song can be copied up to 1,000 times.
- Memory info can be checked in the System menu of Setup.

MENU : Bluetooth® Wireless Technology Audio (if equipped)
If BT Audio is selected, Bluetooth® Wireless Technology audio will start playing.
Audio may not automatically start playing in some mobile phones.

Play/Pause : Press the TUNE knob to play and pause the current song.
The previous song/next song/play / pause functions may not be supported in some mobile phones.

**WARNING**

■ Distracted Driving

Driving while distracted can result in a loss of vehicle control that may lead to an accident, severe personal injury, and death. The driver’s primary responsibility is in the safe and legal operation of a vehicle, and use of any handheld devices, other equipment, or vehicle systems which take the driver’s eyes, attention and focus away from the safe operation of a vehicle or which are not permissible by law should never be used during operation of the vehicle.

Phone Mode (if equipped)

*Making a call using the Steering wheel controls*

- The actual features in the vehicle may differ from the illustration.

1. Mutes the microphone during a call.
2. Press the button to change audio source.
   (With RDS)
   - FM1 ➔ FM2 ➔ FMA ➔ AM ➔ AM ➔ CD ➔ USB(iPod®) ➔ AUX ➔ My Music ➔ BT Audio.
   (Without RDS)
   - FM1 ➔ FM2 ➔ AM ➔ CD ➔ USB(iPod®) ➔ AUX ➔ My Music ➔ BT Audio.
3. Raises or lowers speaker volume.
5. Places and transfers calls.
   - Check call history and making call
     - Shortly press the [CALL] button on the steering wheel controls.
     - The call history list will be displayed on the screen.
     - Press the [CALL] button again to connect a call to the selected number.
   - Redialing the most recently called number
     - Press and hold the [CALL] button on the steering wheel controls.
     - The most recently called number is redialed.
6. Ends calls or cancels functions.

*1 if equipped
**MENU : Phone (Type A-1)**

Press the [PHONE] button to display three menus (Call History, Phone Book, Phone Setup).

**History : [1] Button**
The call history is displayed and can be used to select a number and make a call.
If call history does not exist, a screen asking whether to download call history is displayed. (The download feature may not be supported in some mobile phones)

**P.Book : [2] Button**
The phone book is displayed and can be used to select a number and make a call.
If more than one number is saved to one phone book, then a screen showing the mobile phone number, Home and office number is displayed. Select the desired number to make the call.
If phone book does not exist, a screen asking whether to download phone book is displayed. (The download feature may not be supported in some mobile phones)

**Setup : [3] Button**
The Bluetooth® Wireless Technology mobile phone setup screen is displayed. For more information, refer to “Phone Setup” on page 5-40.

**MENU : Phone (Type A-3)**

Press the [PHONE] button to display three menus (Call History, Contacts, Phone Setup).

**History : [1] Button**
The call history is displayed and can be used to select a number and make a call.
If call history does not exist, a screen asking whether to download call history is displayed. (The download feature may not be supported in some mobile phones)

**Contacts : [2] Button**
The contacts are displayed and can be used to select a number and make a call.
If more than one number is saved to one contact, then a screen showing the mobile phone number, Home and office number is displayed. Select the desired number to make the call.
If contacts do not exist, a screen asking whether to download contacts are displayed. (The download feature may not be supported in some mobile phones)

**Setup : [3] Button**
The Bluetooth® Wireless Technology mobile phone setup screen is displayed. For more information, refer to “Phone Setup” on page 5-45.
Voice Recognition Mode (if equipped)

Using Voice Recognition
- To start voice command, shortly press the button on the steering wheel controls.
- If voice command is in [Normal Mode], then the system will say “Please say a command. Ding”
- If voice command is in [Expert Mode], then the system will only say a “Ding-”
- Setting Voice command [Normal Mode]/[Expert Mode]:
- Say the voice command.

* NOTICE
For proper voice recognition, say the voice command after the guidance message and the “Ding” sound.

Skipping the Guidance Message
While the guidance message is being stated, shortly press the button to discontinue the guidance message and sound the “Ding”. After the “Ding”, say the voice command.

Ending Voice Recognition
- While using voice command, press and hold the button to end voice command.
- While using voice command, pressing the steering wheel controls or a different button will end voice command.
- In a state where the system is waiting for your voice command, shortly press the button to end voice command.

• In a state where the system is waiting for your voice command, shortly press the button to end voice command.
Illustration on Using Voice Recognition

Starting Voice Recognition
Shortly pressing the button:

- Please say a command.
- Ding~
- More Help

More Help.
You can say Radio, FM, AM, Media, CD, USB, Aux, My Music, iPod®, Bluetooth® Audio, Phone, Call History or Phone book. Please say a command.

Skipping Voice Recognition
Shortly pressing the button:

- Please say a... while guidance message is being stated
- Ding~
- More Help

Ending Voice Recognition
Shortly pressing the button:

- Phone book
- Ding~
- Phone book
- Please say the name of the Phone book you want to call.
- Cancel

- Di-Ding~(Cancel Sound)
- More Help
- You can say Radio, FM, AM, Media, CD, USB, Aux, My Music, iPod®, Bluetooth® Audio, Phone, Call History or Phone book. Please say a command.

**Bluetooth® Wireless Technology Audio Commands**

Mode Pop up
- Changes [On] selection mode
  - During On state, press the [RADIO] or [MEDIA] button to display the mode change pop up screen.

Scroll text
- [Scroll text] Set [On/Off]
  - [On]: Maintains scroll
  - [Off]: Scrolls only one (1) time.

**Song Info**

When playing an MP3 file, select the desired display info from ‘Folder/File’ or ‘Album/Artist/Song’.

Press the [SETUP] button ➤ Select [Display]
With the Sound Button

Press the [SETUP] button  ➤ Select [Sound]

Audio Settings

This menu allows you to set the ‘Bass, Middle, Treble’ and the Sound Fader and Balance.
Select [Audio Settings] ➤ Select menu
• Return : While adjusting values, repressing the TUNE knob will restore the parent menu.
• Bass, Middle, Treble : Selects the sound tone.
• Fader, Balance : Moves the sound fader and balance.
• Default : Restores default settings.

Speed Dependent Volume Control

This feature is used to automatically control the volume level according to the speed of the vehicle.
Select [Speed Dependent Vol.] ➤ Set [Off/On]

Volume Dialogue (if equipped)

Adjusts voice recognition volume.
Select [Volume Dialogue]

Audio system
**With the Phone Button (if equipped)**

Press the [SETUP] button  ➤ Select [Phone]

**Pair Phone**
Select [Pair Phone]

---

**CAUTION**

To pair a Bluetooth® Wireless Technology enabled mobile phone, authentication and connection processes are first required. As a result, you cannot pair your mobile phone while driving the vehicle. First park your vehicle before use.

1. Search for device names as displayed on your mobile phone and connect.
   
   ✤ SSP : Secure Simple Pairing
   
   Non SSP supported device :

2. After a few moments, a screen is displayed where the passkey is entered. Enter the passkey “0000” to pair your Bluetooth® Wireless Technology device with the car audio system.

   SSP supported device :

3. After a few moments, a screen is displayed that has the 6 digit passkey from any nearby SSP device that is found. Check the passkey on your Bluetooth® Wireless Technology.

   The device name and passkey will be displayed on the screen for up to 3 minutes. If pairing is not completed within the 3 minutes, the mobile phone pairing process will automatically be canceled.

4. Pairing completion is displayed.

   In some mobile phones, pairing will automatically be followed by connection.

   It is possible to pair up to five Bluetooth® Wireless Technology enabled mobile phones.
Phone List

The names of up to 5 paired phones will be displayed.
A [●] is displayed in front of the currently connected phone.
Select the desired name to setup the selected phone.

- Connecting a phone
  Select [Phone List] ▶ Select mobile phone ▶ Select [Connect Phone]
  1. Select a mobile phone that is not currently connected.
  2. Connect the selected mobile phone.
  3. Connection completion is displayed.

- Disconnecting a connected phone
  Select [Phone List] ▶ Select mobile phone ▶ Select [Disconnect Phone]
  1. Select the currently connected mobile phone.
  2. Disconnect the selected mobile phone.
  3. Disconnection completion is displayed.

- Changing connection sequence (Priority)
  This is used to change the order (priority) of automatic connection for the paired mobile phones.
  Select [Phone List] ▶ Select [Priority] ▶ Select No. 1 Priority mobile phone
  1. Select [Priority].
  2. From the paired phones, select the phone desired for No.1 priority.
  3. The changed priority sequence is displayed.

Once the connection sequence (priority) is changed, the new no. 1 priority mobile phone will be connected.
When the no. 1 priority cannot be connected : Automatically attempts to connect the most recently connected phone.
Cases when the most recently connected phone cannot be connected :
Attempts to connect in the order in which paired phones are listed.
The connected phone will automatically be changed to No. 1 priority.

- Delete
  Select [Phone List] ▶ Select mobile phone ▶ Select [Delete]
  1. Select the desired mobile phone.
  2. Delete the selected mobile phone.
  3. Deletion completion is displayed.

When attempting to delete a currently connected phone, the phone is first disconnected.
Audio system

⚠️ CAUTION

- When you delete a mobile phone, the mobile phone book will also be erased.
- For stable Bluetooth® Wireless Technology communication, delete the mobile phone from the audio and also delete the audio from your mobile phone.

Phone book Download
This feature is used to download phone book and call histories into the audio system.
Select [Phone book Download]

⚠️ CAUTION

- The download feature may not be supported in some mobile phones.
- When downloading new phone book, delete all previously saved phone book before starting download.

Auto Download
When connecting a mobile phone, it is possible to automatically download new phone book and Call Histories.
Select [Auto Download] ◄ Set [On/Off]

Outgoing Volume
This is used to set the volume of your voice as heard by the other party while on a Bluetooth® Wireless Technology enabled handsfree call.
Select [Outgoing Volume] ◄ Set volume
Even while on a call, the volume can be changed by using the [SEEK TRACK] button.

Bluetooth System Off
This feature is used when you do not wish to use the Bluetooth® Wireless Technology system.
Select [Bluetooth System Off].
If a phone is already connected, disconnect the currently connected phone and turn the Bluetooth® Wireless Technology system off.

Using the Bluetooth® Wireless Technology
To use Bluetooth® Wireless Technology when the system is currently off, follow these next steps.

- Turning On Bluetooth® Wireless Technology through the [PHONE] button.
  Press the [PHONE] button ► Screen Guidance
  Moves to the screen where Bluetooth® Wireless Technology functions can be used and displays guidance.
- Turning On Bluetooth® Wireless Technology through the [SETUP] button.
  Press the [SETUP] button ◄ Select [Phone]
  1. A screen asking whether to turn on Bluetooth® Wireless Technology will be displayed.

If the Bluetooth® Wireless Technology system is turned on, the system will automatically try to connect the most recently connected Bluetooth® Wireless Technology mobile phone.
**With the System Button**

Press the [SETUP] button ▶ Select [System]

**Memory Information (if equipped)**

Displays currently used memory and total system memory.
Select [Memory Information] ▶ OK

The currently used memory is displayed on the left side while the total system memory is displayed on the right side.

* May differ depending on the selected audio.

**VRS Mode (if equipped)**

This feature is used to change voice command feedback between Normal and Expert modes. Select [VRS Mode]

- Normal : This mode is for beginner users and provides detailed instructions during voice command operation.
- Expert : This mode is for expert users and omits some information during voice command operation. (When using Expert mode, guidance instructions can be heard through the [Help] or [Menu] commands.

**Language**

This menu is used to set the display and voice recognition language. Select [Language]
The system will reboot after the language is changed.

- Language support by region. Dansk, Deutsch, English(UK), Español, Français, Italiano, Nederlands, Русский, Polski, Svenska, Türkçe

The names of up to 5 paired phones will be displayed. A [>] is displayed in front of the currently connected phone. Select the desired name to setup the selected phone.

**Connecting a phone**

Select [Phone List] ➤ Select mobile phone ➤ Select [Connect Phone]
1. Select a mobile phone that is not currently connected.
2. Connect the selected mobile phone.
3. Connection completion is displayed.

If a phone is already connected, disconnect the currently connected phone and select a new phone to connect.

**Disconnecting a connected phone**

Select [Phone List] ➤ Select mobile phone ➤ Select [Disconnect Phone]
1. Select the currently connected mobile phone.
2. Disconnect the selected mobile phone.
3. Disconnection completion is displayed.

**Changing connection sequence (Priority)**

This is used to change the order (priority) of automatic connection for the paired mobile phones.

Select [Phone List] ➤ Select [Priority] ➤ Select No. 1 Priority mobile phone
1. Select [Priority].
2. From the paired phones, select the phone desired for No. 1 priority.
3. The changed priority sequence is displayed.

Once the connection sequence (priority) is changed, the new no. 1 priority mobile phone will be connected. When the no. 1 priority cannot be connected: Automatically attempts to connect the most recently connected phone. Cases when the most recently connected phone cannot be connected: Attempts to connect in the order in which paired phones are listed. The connected phone will automatically be changed to No. 1 priority.

**Delete**

Select [Phone List] ➤ Select mobile phone ➤ Select [Delete]
1. Select the desired mobile phone.
2. Delete the selected mobile phone.
3. Deletion completion is displayed.
When attempting to delete a currently connected phone, the phone is first disconnected.

⚠️ CAUTION

- When you delete a mobile phone, the mobile phone book will also be erased.
- For stable Bluetooth® Wireless Technology communication, delete the mobile phone from the audio and also delete the audio from your mobile phone.

Contacts Download
This feature is used to download contacts and call histories into the audio system.
Select [Contacts Download]

⚠️ CAUTION

• The download feature may not be supported in some mobile phones.

(Continued)

- When downloading new Contacts, delete all previously saved Contacts before starting download.

Auto Download
When connecting a mobile phone, it is possible to automatically download new Contacts and Call Histories.
Select [Auto Download] ▶ Set [On/Off]

Outgoing Volume
This is used to set the volume of your voice as heard by the other party while on a Bluetooth® Wireless Technology enabled handsfree call.
Select [Outgoing Volume] ▶ Set volume while on a call, the volume can be changed by using the [SEEK TRACK] button.

Bluetooth System Off
This feature is used when you do not wish to use the Bluetooth® Wireless Technology system.
Select [Bluetooth System Off].
If a phone is already connected, disconnect the currently connected phone and turn the Bluetooth® Wireless Technology system off.

Using the Bluetooth® Wireless Technology
To use Bluetooth® Wireless Technology when the system is currently off, follow these next steps.

• Turning On Bluetooth® Wireless Technology through the [PHONE] button.
Press the [PHONE] button ▶ Screen Guidance
Moves to the screen where Bluetooth® Wireless Technology functions can be used and displays guidance.

• Turning On Bluetooth® Wireless Technology through the [SETUP] button.
Press the [SETUP] button ▶ Select [Phone]
1. A screen asking whether to turn on Bluetooth® Wireless Technology will be displayed.

If the Bluetooth® Wireless Technology system is turned on, the system will automatically try to connect the most recently connected Bluetooth® Wireless Technology mobile phone.
With the System Button

Press the [SETUP] button ➤ Select [System]

Memory Information (if equipped)

Displays currently used memory and total system memory.
Select [Memory Information] ➤ OK
The currently used memory is displayed on the left side while the total system memory is displayed on the right side.

Language

This menu is used to set the display.
Select [Language]
The system will reboot after the language is changed.
• Language support by region.
  English, Português, Español
AUDIO (WITH TOUCH SCREEN)

    • Each time the button is pressed, the mode is changed in order of AM.

Before using the audio system

* NOTICE

- Using Compact Discs
  • This device has been manufactured to be compatible with software bearing the following logo marks.
  • Do not clean discs with chemical solutions, such as record sprays, antistatic sprays, antistatic liquids, benzene, or thinners.
  • After using a disc, put the disc back in its original case to prevent disc scratches.
  • Hold discs by their edges or within the center hole to prevent damage to disc surfaces.
  • Do not introduce foreign substances into the disc insert/eject slot. Introducing foreign substances could damage the device interior.

(Continued)
Do not insert two discs simultaneously.
When using CD-R/CD-RW discs, differences in disc reading and playing times may occur depending on the disc manufacturer, production method and the recording method used.
Clean fingerprints and dust off the disc surface (coated side) with a soft cloth.
The use of CD-R/CD-RW discs attached with labels may result in disc slot jams or difficulties in disc removal. Such discs may also result in noise while playing.
Some CD-R/CD-RW discs may not properly operate depending on the disc manufacturer, production method and the recording method used. If problems persist, trying using a different CD as continued use may result in malfunctions.

(Continued)

The performance of this product may differ depending on the CDRW Drive Software.
Copy-protected CDs such as Store CDs may not function in the device. DATA discs cannot be played. (However, such discs may still operate but will do so abnormally.)
Do not use abnormally shaped discs (8cm, heart-shaped, octagon-shaped) as such discs could lead to malfunctions.
If the disc is straddled on the disc slot without removal for 10 seconds, the disc will automatically be re-inserted into the disc player.
Only genuine audio CDs are supported. Other discs may result in recognition failure (e.g. copy CDR, CDs with labels)

</table>

- For MP3/WMA compression files, differences in sound quality will occur depending on the bitrate. (Higher sound quality can be experienced with higher bitrates.)
- This device only recognizes files with MP3/WMA extensions. Other file extensions may not be properly recognized.

#### Maximum number of recognized folders and files

- Folder: 255 folders for CD, 2,000 folders for USB
- File: 999 files for CD, 6,000 files for USB

There are no limitations to the number of recognized folder levels.

#### Language Support (Unicode Support)

1. English: 94 characters
2. Special characters and Symbols: 986 characters

Korean, English and Chinese are supported.

#### Text Display (Based on Unicode)

- File name: Maximum 64 English characters
- Folder name: Max 32 English characters

* Using the scroll feature allows you to see the entire name of files with names that are too long to be displayed at once.

#### Compatibility by Disc Type

1. Playing MIXED CDs: First plays the audio CD, then plays the compressed file(s).
2. Playing EXTRA CDs: First plays the audio CD, then plays the compressed file(s).
3. Playing multisession CDs: Plays in order of sessions

- MIXED CD: CD type in which both MP3 and audio CD files are recognized in one disc.
- Multisession CD: CD type that includes more than two sessions. Different from Extra CDs, multisession CDs are recorded by sessions and have no media limitation.

#### Precautions upon Writing CDs
1. In all cases except when creating multisession discs, check the close session option before creating the disc. Though product malfunctions will not occur, some time may be required for the device to check whether the session state is closed (approximately 25 seconds). (Additional time may also be required depending on the number of folders or files.)

2. Changing the MP3/WMA file extensions or changing files of other extensions to MP3/WMA may result in product malfunction.

3. When naming files with MP3/WMA file extensions, write using only Korean and English. (Korean, English and Chinese are supported.)

4. Unauthorized use or duplication of music files are prohibited by law.

5. Prolonged use of CD-R/CD-RW discs that do not satisfy related standards and/or specifications could result in product malfunction.

* NOTICE

■ Using the USB Devices
- Connect the USB device after turning on the engine. The USB device may become damaged if it is already connected when the ignition is turned on. The USB device may not operate properly if the car ignition is turned on or off with the USB device connected.
- Be careful for static electricity when connecting/disconnecting USB devices.
- Encoded MP3 Players will not be recognized when connected as an external device.
- When connecting an external USB device, the vehicle’s audio system may not recognize the USB depending on what firmware is used by USB device or what files are on the USB.

(Continued)

- Only products formatted with byte/sectors under 64Kbyte will be recognized.
- This device recognizes USB devices formatted in FAT 12/16/32 file formats. This device does not recognize files in NTFS file format.
- Some USB devices may not be supported due to compatibility issues.
- Avoid contact between the USB connector and bodily parts or foreign objects.
- Repeated connecting/disconnecting of USB devices within short periods of time may result in product malfunction.
- A strange noise may occur when disconnecting the USB.
- Make sure to connect/disconnect external USB devices with the audio power turned off.

(Continued)
(Continued)

- The amount of time required to recognize the USB device may differ depending on the type, size or file formats stored on the USB. Such differences in time are not indications of malfunctions.
- The vehicle audio system only supports USB devices designed to play music files.
- USB images and videos are not supported.
- Do not use the USB I/F to charge batteries or USB accessories that generate heat. Doing so may lead to worsened performance or damage to the audio system.
- The audio system may not recognize the USB device if separately purchased USB hubs and extension cables are being used. Connect the USB device directly with the USB port of the vehicle.

(Continued)

- When using mass storage USB devices with separate logical drives, only files saved to the root drive can be played.
- Files may not properly operate if application programs are installed on the USBs.
- The audio system may not operate normally if MP3 Players, cellular phones, digital cameras, or other electronic devices (USB devices not recognized as portable disk drives) are connected with the audio system.
- Charging through the USB may not work for some mobile devices.
- The device may not support normal operation when using an atypical USB memory device (miniature, keychain, etc.). For best results, use a typical USB device that has a metal case.

(Continued)

- The device may not support normal operation when using formats such as HDD Type, CF, or SD Memory.
- The device will not support files locked by DRM (Digital Rights Management.)
- USB memory sticks used by connecting an Adaptor (SD Type or CF Type) may not be properly recognized.
- The device may not operate properly when using USB HDDs or USBs subject to connection failures caused by vehicle vibrations. (e.g. i-stick type)

- Avoid use of USB memory products that can also be used as key chains or mobile phone accessories.

Use of such products may cause damage to the USB jack.

(Continued)
· Connecting an MP3 device or phone through various channels, such as AUX/BT or Audio/USB mode may result in pop noises or abnormal operation.

*NOTICE*

■ Using an iPod®
· iPod® is a registered trademark of Apple Inc.
· In order to use the iPod® with your vehicle’s audio system, you must use a dedicated iPod® cable. (the cable that is supplied when purchasing iPod®/iPhone® products)

(Continued)

· If the iPod® is connected to the vehicle while it is playing, a high pitch sound could occur for approximately 1-2 seconds immediately after connecting. If possible, connect the iPod® to the vehicle with the iPod® stopped/paused.
· When the vehicle ignition is set to ACC or ON, connecting the iPod® through the iPod® cable will charge the iPod® through the car audio system.
· When connecting with the iPod® cable, make sure to fully insert the jack to prevent communication interference.

(Continued)

· When the EQ features of an external device, such as the iPod®, and the audio system are both active, EQ effects could overlap and cause sound deterioration and distortion. Whenever possible, turn off the EQ feature within the external device when it is connected to the audio system.
· Noise may occur when an iPod® or AUX device is connected. When such devices are not being used, disconnect the device for storage.
· When the iPod® or AUX device power is connected to the power jack, playing the external device may result in noise. In such cases, disconnect the power connection before use.
· Skipping or improper operation may occur depending on the characteristics of your iPod®/iPhone® device.

(Continued)
Audio system

(Continued)

• If your iPhone is connected to both the Bluetooth® Wireless Technology and USB, the sound may not be properly played. In your iPhone, select the Dock connector or Bluetooth® Wireless Technology to change the sound output (source).

• iPod® mode cannot be operated when the iPod® cannot be recognized due to the playing of versions that do not support communication protocols, cases of iPod® abnormalities and defects.

• For fifth generation iPod® Nano devices, the iPod® may not be recognized when the battery level is low. Please charge the iPod® for use.

• The search/play orders shown within the iPod® device may differ from the orders shown within the audio system.

(Continued)

(Continued)

• If the iPod® malfunctions due to an iPod® device defect, reset the iPod® and try again. (To learn more, refer to your iPod® manual)

• Some iPod®s may not sync with the System depending on the version. If the Media is removed before the Media is recognized, then the system may not properly restore the previously operated mode. (iPad charging is not supported.)

• Use an iPod® cable shorter than 1 meter in length such as the one originally supplied with a new iPod®, longer cables may lead to the audio system not recognizing the iPod®.

* NOTICE

- Using the Bluetooth® Wireless Technology Audio Mode (if equipped)

(Continued)

(Continued)

• Bluetooth® Wireless Technology Audio Mode can be used only when a Bluetooth® Wireless Technology phone has been connected.

• Bluetooth® Wireless Technology Audio Mode will not be available when connecting mobile phones that do not support this feature.

• If a Bluetooth® Wireless Technology Phone is being used to play music and receives an incoming or outgoing phone call, then the music will stop.

• Moving the Track up/down while playing Bluetooth® Wireless Technology audio mode may result in pop noises in some mobile phones.

• Bluetooth® Wireless Technology streaming audio may not be supported in some mobile phones.

(Continued)
(Continued)

- When returning to Bluetooth® Wireless Technology Audio mode after ending a call, the mode may not automatically restart in some mobile phones.
- Receiving an incoming call or making an outgoing call while playing Bluetooth® Wireless Technology Audio may result in audio interference.

*NOTICE*

■ Using the Bluetooth® Wireless Technology Cellular Phone (if equipped)

- Bluetooth® Wireless Technology Handsfree refers to a device which allows the user to conveniently make phone calls with Bluetooth® Wireless Technology mobile phones through the audio system.

(Continued)

- Bluetooth® Wireless Technology allows devices to be connected in a short distance, including handsfree devices, stereo headsets, wireless remote controllers, etc. For more information, visit the Bluetooth® Wireless Technology website at www.Bluetooth.com. Before using Bluetooth® Wireless Technology audio features.

- The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth® SIG, Inc. and any use of such marks by Kia is under license. Other trademarks and trade names are those of their respective owners. A Bluetooth® enabled cell phone is required to use Bluetooth® Wireless Technology.

- Bluetooth®

Wireless Technology features supported within the vehicle are as follows. Some features may not be supported depending on your Bluetooth® Wireless Technology device.

- Answering and placing Bluetooth® Wireless Technology Handsfree calls
- Menu operation during call (Switch to Private, Switch to call waiting, Outgoing volume)
- Download Call History
- Download Mobile Phone book
- Phone book/Call History Auto Download
- Bluetooth® Wireless Technology device auto connection
- Bluetooth® Wireless Technology Audio

(Continued)
Audio system

(Continued)

• Before using Bluetooth® Wireless Technology related features of the audio system, refer your phone’s User’s Manual for phone-side Bluetooth® Wireless Technology operations.

• The phone must be paired to the audio system to use Bluetooth® Wireless Technology related features.

• Pairing and connecting a Bluetooth® Wireless Technology enabled mobile phone will work only when the Bluetooth® Wireless Technology option within your mobile phone has been turned on. (Methods of turning on the Bluetooth® Wireless Technology enabled feature may differ depending on the mobile phone.)

• Do not use a cellular phone or perform Bluetooth® Wireless Technology settings (e.g. pairing a phone) while driving.

(Continued)

(Continued)

• Even if the phone supports Bluetooth® Wireless Technology, the phone will not be found during device searches if the phone has been set to hidden state or the Bluetooth® Wireless Technology has been deactivated. Disable the hidden state or activate the Bluetooth® Wireless Technology prior to searching/connecting with the car audio system.

• You will not be able to use the hands-free feature when your phone (in the car) is outside of the cellular service area. (e.g. in a tunnel, in an underground area, in a mountainous area, etc.)

• If the cellular phone signal is poor or the vehicle's interior noise is too loud, it may be difficult to hear the other person’s voice during a call.

(Continued)

(Continued)

• Do not place the phone near or inside metallic objects, otherwise communications with Bluetooth® Wireless Technology system or cellular service stations can be disturbed.

• Placing the audio system within an electromagnetic environment may result in noise interference.

• Some cellular phones or other devices may cause interference noise or malfunction to the audio system. In this case, storing the device in a different location may resolve the condition.

• While a phone is connected through Bluetooth® Wireless Technology your phone may discharge quicker than usual for additional Bluetooth® Wireless Technology-related operations.

• If Priority is set upon vehicle ignition (IGN/ACC ON), the Bluetooth® Wireless Technology phone will be
automatically connected. Even if you are outside, the Bluetooth® Wireless Technology phone will be automatically connected once you are in the vicinity of the vehicle. If you do not want to automatically connect your Bluetooth® Wireless Technology phone, try the following.
1. Turn off the Bluetooth® Wireless Technology feature in your mobile phone.
2. Turn off the Bluetooth® Wireless Technology feature in your car audio system.
   - To turn off the Bluetooth® Wireless Technology feature in your car audio system, go to [SETUP] > [Phone] and [turn off] the Bluetooth® Wireless Technology feature.

- Bluetooth®

Wireless Technology connection may become intermittently dis-
(Continued)
CAUTION

- Bluetooth® Wireless Technology Handsfree is a feature that enables drivers to practice safe driving. Connecting the car audio system with a Bluetooth® Wireless Technology phone allows the user to conveniently make calls, receive calls, and manage the phone book. Before using the Bluetooth® Wireless Technology, carefully read the contents of this user's manual.

- Excessive use or operations while driving may lead to negligent driving practices and be the cause of accidents.

- Do not operate the device excessively while driving.

- Viewing the screen for prolonged periods of time is dangerous and may lead to accidents.

- When driving, view the screen only for short periods of time.

NOTICE

- Using the Voice Recognition (if equipped)
  - When using the voice recognition feature, only commands listed within the user's manual are supported.
  - Be aware that during the operation of the voice recognition system, pressing any button other than the button or touching the screen will terminate voice recognition mode.
  - For superior voice recognition performance, position the microphone used for voice recognition above the head of the driver's seat and maintain a proper position when saying commands.
  - Within the following situations, voice recognition may not function properly due to external sound. When the windows and sunroof are open

(Continued)

(Continued)

- When the wind of the cooling/heating device is strong

- When entering and passing through tunnels

- When driving on rugged and uneven roads.

- During severe rain (heavy rains, windstorms)

- Phone related voice commands can be used only when a Bluetooth® Wireless Technology device is connected.

- When making calls by stating a name, the corresponding contact must be downloaded and stored within the audio system.

- After downloading the Bluetooth® Wireless Technology phone book, it takes some time to convert the phone book data into voice information. During this time, voice recognition may not properly operate.

(Continued)
(Continued)

• Pronounce the voice commands naturally and clearly as if in a normal conversation.

Radio Mode (Type B-1, Type B-2)

Radio Mode Display Controls

1. Mode Display
   Displays currently operating mode.

2. Frequency
   Displays the current frequency.

3. Preset
   Displays current preset number [1] ~ [6].

4. Preset Display
   Displays saved presets.

5. Auto store
   Automatically saves frequencies with superior reception to Preset buttons.

6. RDS Menu
   Displays the RDS Menu.

7. RDS Info
   Displays RDS broadcast information.

With the Radio Mode Button

Pressing the [RADIO] button will change the operating mode in order of FM1 ➔ FM2 ➔ FMA ➔ AM ➔ AMA.
If [Pop-up Mode] is turned on within [SETUP] ➔ [Display], then pressing the [RADIO] button will display the Radio Pop-up Mode screen.
Turn the TUNE knob to move the focus. Press the knob to select.

SEEK
Press the [SEEK TRACK] button to play the previous/next frequency.

TUNE
Turn the TUNE knob to select the desired frequency.
Selecting/Saving Presets

Press the [1] ~ [6] buttons to play the desired preset.
Press the [Preset] button to display the broadcast information for the frequency saved to each button.
While listening to a frequency you want to save as a preset, press and hold one of the [1] ~ [6] preset buttons to save the current frequency to the selected preset.

Auto Store
Press the [Auto store] button to automatically save receivable frequencies to Preset buttons.
While Auto Store is operating, pressing the [Auto store] button again will cancel Auto Store and restore the previous frequency.

RDS Menu
Press the [RDS Menu] button to set the AF (Alternative Frequency), Region and News features.
The RDS Menu is not supported within AM or AMA mode.

Scan
Press the [SCAN] button : Previews each broadcast for 5 seconds each

Once scan is complete, the previous frequency will be restored.
While Scan is operating, pressing the [SCAN] button will cancel scanning.

TA (Traffic Announcement)
Press the [TA] button to turn the TA (Traffic Announcement) feature On/Off.
Radio Mode (Type B-3, Type B-4)
Radio Mode Display Controls

1. Mode Display
Displays currently operating mode.

2. Frequency
Displays the current frequency.

3. Preset
Displays current preset number [1] ~ [6].

4. Preset Display
Displays preset buttons.

5. Auto store
Automatically saves frequencies with superior reception to Preset buttons.

With the Radio Mode Button

Pressing the [RADIO] button will change the operating mode in order of FM1 ➤ FM2 ➤ AM.
If [Pop-up Mode] is turned on within [SETUP] ➤ [Display], then pressing the [RADIO] button will display the Radio Pop-up Mode screen.
Turn the TUNE knob to move the focus. Press the knob to select.

5-67
Audio system
Auto Store
Press the [Auto store] button to automatically save receivable frequencies to Preset buttons.

Scan
Press the [SCAN] button to preview frequencies with superior reception for 5 seconds each.
Press and hold the [SCAN] button to preview presets for 5 seconds each.
Once scan is complete, the previous frequency will be restored.
While Scan is operating, pressing the [SCAN] button will cancel scanning.

Media Mode
Media Mode Screen

Pressing the [MEDIA] button will change the operating mode in order of CD ➔ USB(iPod®) ➔ AUX ➔ My Music ➔ BT Audio.
If [Pop-up Mode]/[Mode Pop-up] is turned on within [SETUP] ➔ [Display], then pressing the [MEDIA] button will display the Media Pop-up Mode screen.
Turn the TUNE knob to move the focus.
Press the knob to select.
The media mode pop up screen can be displayed only when there are two or more media modes turned on.

Mode Display on the Status Bar

When a Bluetooth® Wireless Technology, iPod®, USB or AUX device is connected or a CD is inserted, the corresponding mode icon will be displayed.

9. List
   Moves to the list screen.

   Turn the TUNE knob left/right to search for tracks. Once the desired track is displayed, press the knob to select and play.

With the Audio CD Mode

Playing/Pausing CD Tracks
Once an audio CD is inserted, the mode will automatically start and begin playing.

While playing, press the [II] button to pause and press [▶] button to play. Only genuine audio CDs are supported. Other discs may result in recognition failure (e.g. copy CD-R, CDs with labels). The artist and title information are displayed on the screen if track information is included within the audio CD.

Changing Tracks
Press the [SEEK TRACK] button to move to the previous or next track. Pressing the [SEEK TRACK ▼] button after the track has been playing for 2 seconds will start the current track from the beginning. Pressing the [SEEK TRACK ▼] button before the track has been playing for 1 second will start the previous track.
Selecting from the List

Turn the **TUNE** knob left/right to search for the desired track. Once you find the desired track, press the **TUNE** knob to start playing.

**Rewinding / Fast-forwarding Tracks**

While playing, press and hold the **SEEK TRACK** button to rewind or fast-forward the current track.

**Scan**

Press the **SCAN** button to play the first 10 seconds of each file. Press the **SCAN** button again to turn off.

**MENU : MP3 CD**

**MP3 CD Mode Display Controls**

• Type B-1, Type B-2

• Type B-3, Type B-4

1. **Mode**
   - Displays currently operating mode.

2. **Operation State**
   - From Repeat/Random(Shuffle)/Scan, displays the currently operating function.

3. **File Index**
   - Displays the current file number.

4. **File Info**
   - Displays information about the current file.

5. **Play/Pause**
   - Changes the play/pause state.

6. **Play Time**
   - Displays the current play time.

7. **Info**
   - Shows detailed information about the current file. When the ‘Folder File’ option is set as the default display within Display setup, the album/artist/file information are displayed as detailed file information. When the ‘Album Artist Song’ option is set as the default display, the folder name/file name are displayed as detailed file information. The title, artist and album info are displayed only when such information is recorded within the MP3 file ID3 tag.

8. **Random(Shuffle)**
Turns the Random(Shuffle) feature on/off. Each time the button is pressed, the feature changes in order of Random (Shuffle) Folder ➔ Random (Shuffle) All ➔ Off. 
- Random(Shuffle) Folder : Plays all files within the current folder in Random (Shuffle) order. 
- Random(Shuffle) All : Plays all files in Random(Shuffle) order.

9. **Repeat**
Turns the Repeat feature on/off. Each time the button is pressed, the feature changes in order of Repeat ➔ Repeat Folder ➔ Off. 
- Repeat : Repeats the current file. 
- Repeat Folder : Repeats all files within the current Folder.

10. **Copy**
Copies the current file into My Music. Selecting another feature during copying will display a pop-up asking whether you wish to cancel copying. To cancel, select “Yes”.

11. **List**
Moves to the list screen. Turn the TUNE knob left/right to search for files. Once the desired file is displayed, press the knob to select and play.

**With the MP3 CD Mode**

**Playing/Pausing MP3 Files**
Once an MP3 disc is inserted the mode will automatically start and being playing. While playing, press the [II] button to pause and press [▶] button to play. If there are numerous files and folders within the disc, reading time could take more than 10 seconds and the list may not be displayed or song searches may not operate. Once loading is complete, try again.

**Changing Files**
Press the [SEEK TRACK] button to move to the previous or next file. Pressing the [SEEK TRACK ▼] button after the file has been playing for 2 seconds will start the current file from the beginning. Pressing the [SEEK TRACK ▲] button before the file has been playing for 1 second will start the previous file.

**Selecting from the List**

Turn the TUNE knob left/right to search for the desired file. Once you find the desired file, press the TUNE knob to start playing.

**Rewinding/Fast-forwarding Files**
While playing, press and hold the [SEEK TRACK] button to rewind or fast-forward the current file.

**Scan**
Press the [SCAN] button to play the first 10 seconds of each file. Press the [SCAN] button again to turn off.
Searching Folders

Press the [FOLDER] button to select and search folders. Once the desired folder is displayed, press the TUNE knob to select. The first file within the selected folder will begin playing.

1. **Mode**
   Displays currently operating mode.

2. **Operation State**
   From Repeat/Random(Shuffle)/Scan, displays the currently operating function.

3. **File Index**
   Displays the current file number.

4. **File Info**
   Displays information about the current file.

5. **Play/Pause**
   Changes the play/pause state.

6. **Play Time**
   Displays the current play time.

7. **Info**
   Displays detailed information for the current file.

   When the ‘Folder File’ option is set as the default display within Display setup, the album/artist/file information are displayed as detailed file information.

   When the ‘Album Artist Song’ option is set as the default display, the folder name/file name are displayed as detailed file information. The title, artist and album info are displayed only when such information are recorded within the MP3 file ID3 tag.

8. **Random(Shuffle)**

---

**MENU : USB**

USB Mode Display Controls

- **Type B-1, Type B-2**

- **Type B-3, Type B-4**
Turns the Random(Shuffle) feature on/off. Each time the button is pressed, the feature changes in order of Random(Shuffle) Folder ➔ Random (Shuffle) All ➔ Off.
- Random(Shuffle) Folder : Plays the files in the current folder in random(Shuffle) order.
- Random(Shuffle) All : Plays all files in random(Shuffle) order.

9. **Repeat**
Turns the Repeat feature on/off. Each time the button is pressed, the feature changes in order of Repeat ➔ Repeat Folder ➔ Off.
- Repeat : Repeats the current file.
- Repeat Folder : Repeats all files within the current Folder.

10. **Copy**
Copies the current file into My Music.
Selecting another feature during copying will display a pop-up asking whether you wish to cancel copying. To cancel, select “Yes”.

11. **List**
Moves to the list screen. Turn the TUNE knob left/right to search for files. Once the desired file is displayed, press the knob to select and play.

**With the USB Mode**

**Playing/Pausing USB Files**
Once a USB is connected, the mode will automatically start and begin playing a USB file.
While playing, press the [II] button to pause and press [▶] button to play.
Loading may require additional time if there are many files and folders within the USB and may result in faulty list display or file search. Normal operations will resume once loading is complete.
The device may not support normal operation when using a USB memory type besides (Metal Cover Type) USB Memo-

**Changing Files**
Press the [SEEK TRACK] button to move to the previous or next file.
Pressing the [SEEK TRACK ▼] button after the file has been playing for 2 seconds will start the current file from the beginning.

Pressing the [SEEK TRACK ▼] button before the file has been playing for 1 second will start the previous file.

**Selecting from the List**

While playing, press the [II] button to play the first 10 seconds of each file.
Press the [SCAN] button again to turn off.

Turn the TUNE knob left/right to search for the desired file.
Once you find the desired file, press the TUNE knob to start playing.

**Rewinding/Fast-forwarding Files**
While playing, press and hold the [SEEK TRACK] button to rewind or fast-forward the current file.

**Scan**
Press the [SCAN] button to play the first 10 seconds of each file.
Searching Folders

Press the [FOLDER] button to select and search folders. Once the desired folder is displayed, press the TUNE knob to select. The first file within the selected folder will begin playing.

**MENU : iPod®**

**iPod® Mode Display Controls**

- **Type B-1, Type B-2**
  ![iPod Mode Display Controls](image)

- **Type B-3, Type B-4**
  ![iPod Mode Display Controls](image)

1. **Mode**
   Displays currently operating mode.

2. **Operation State**
   From Repeat/Random(Shuffle)/Scan, displays the currently operating function.

3. **Song Index**
   Displays the current song/total number of songs.

4. **Song Info**
   Displays information about the current song.

5. **Play/Pause**
   Changes the play/pause state.

6. **Play Time**
   Displays the current play time.

7. **Random(Shuffle)**
   Turns the Random(Shuffle) feature on/off.
   - Random(Shuffle) All : Plays all songs in Random(Shuffle) order.

8. **Repeat**
   Turns the Repeat feature on/off.
   - Repeat : Repeats the current song

9. **List**
   Moves to the list screen.
   Turn the TUNE knob left/right to search for the desired category. Once you find the desired category, press the TUNE knob to select and play.
With the iPod® Mode

Playing/Pausing iPod® Songs
Once an iPod® is connected, the mode will automatically start and begin playing an iPod® song. While playing, press the [II] button to pause and press [▶] button to play. iPod®'s with unsupported communication protocols may not properly operate in the audio system.

Changing Songs
Press the [SEEK TRACK] button to move to the previous or next song. Pressing the [SEEK TRACK \( \uparrow \)] button after the song has been playing for 2 seconds will start the current song from the beginning. Pressing the [SEEK TRACK \( \uparrow \)] button before the song has been playing for 1 second will start the previous song. Slight time differences may exist depending your iPod® product.

Rewinding / Fast-forwarding Songs
While playing, press and hold the [SEEK TRACK] button to rewind or fast-forward the current song.

• Type B-1, Type B-2

![iPod Mode Picture]

• Type B-3, Type B-4

![iPod Mode Picture]

Searching Categories
Turn the TUNE knob left/right to search for the desired category. Once you find the desired category, press the TUNE knob to select and play. There are eight categories that can be searched, including Playlists, Artists, Albums, Genres, Songs, Composers, Audiobooks and Podcasts.

Category Menu
1. Displays the play screen.
2. Moves to the iPod® root category screen.
3. Moves to the previous category.

If the search mode is accessed while playing a song, the most recently searched category is displayed. Search steps upon initial connection may differ depending on the type of iPod® device.

MENU : AUX

AUX Mode Display Controls

• Type B-1, Type B-2

![AUX Mode Picture]
Connect a connector jack to the AUX terminal without an external device will convert the system to AUX mode, but only output noise. When an external device is not being used, also remove the connector jack. When the external device power is connected to the power jack, playing the external device may output noise. In such cases, disconnect the power connection before use. Fully insert the AUX cable to the AUX jack upon use.

**MENU : My Music Mode**

**My Music Mode Display Controls**

1. **Mode**
   - Displays currently operating mode.

2. **Operation State**
   - From Repeat/Random(Shuffle)/Scan, displays the currently operating function.

3. **File Index**
   - Displays the current file/total number of files.

4. **File Info**
   - Displays information about the current file.

5. **Play/Pause**
   - Changes the play/pause state.

6. **Play Time**
   - Displays the current play time.
7. **Info**
   Displays detailed information for the current file.
   The title, artist and album info are displayed only when such information is recorded within the MP3 file ID3 tag.

8. **Random(Shuffle)**
   Turns the Random(Shuffle) feature on/off.

9. **Repeat**
   Turns the Repeat feature on/off.

10. **Delete**
    Deletes the current file.

11. **List**
    Moves to the list screen.
    Turn the TUNE knob left/right to search for files. Once the desired file is displayed, press the knob to select and play.

**With the My Music Mode**

**Playing/Pausing My Music Files**
While playing, press the [II] button to pause and press [▶] button to play.
If there are no files saved within My Music, the [My Music] button will be disabled.

**Changing Files**
Press the [SEEK TRACK] button to move to the previous or next file.
Pressing the [SEEK TRACK v] button after the file has been playing for 2 seconds will start the current file from the beginning.
Pressing the [SEEK TRACK ▼] button before the file has been playing for 1 second will start the previous file.

**Selecting from the List**
Turn the TUNE knob left/right to search for the desired file.
Once you find the desired file, press the TUNE knob to start playing.
From the List screen, it is possible to delete files you previously saved into My Music.

**List Menu**
1. Moves to the previous screen.
2. Selects all files.
3. Deselects all selected files.
4. Deletes selected files.

After selecting the files you want to delete, press the [Delete] button to delete the selected files.
If there is memory available, up to 6,000 files can be saved. Identical files cannot be copied more than 1,000 times.
To check memory information, go to [SETUP] ▶ [System] ▶ [Memory Information]

Rewinding/Fast-forwarding Files
While playing, press and hold the [SEEK TRACK] button to rewind or fast-forward the current file.

Scan
Press the [SCAN] button to play the first 10 seconds of each file.
Press the [SCAN] button again to turn off.

**MENU : Bluetooth® Wireless Technology Audio (if equipped)**

Using Bluetooth® Wireless Technology Audio Mode

Playing/Pausing Bluetooth® Wireless Technology Audio
Once a Bluetooth® Wireless Technology device is connected, the mode will automatically start.
While playing, press the [▶] button to pause and press [▶] button to play.
The play/pause feature may operate differently depending on the mobile phone.

Changing Files
Press the [SEEK TRACK] button to move to the previous or next file.

Setting Connection
If a Bluetooth® Wireless Technology device has not been connected, press the [SETUP] button ▶ [Phone] button to display the Bluetooth® Wireless Technology connection screen.
It is possible to use the pair phone, connect/disconnect and delete features from your Bluetooth® Wireless Technology phone.
If music is not yet playing from your mobile device after converting to Bluetooth® Wireless Technology Audio mode, pressing the play button once may start playing the mode. Check to see that music is playing from the Bluetooth® Wireless Technology Audio Mode after converting to Bluetooth® Wireless Technology Audio Mode.
Phone Mode (if equipped)

Making a call using the Steering wheel controls

The actual features in the vehicle may differ from the illustration.

1. Mutes audio volume.
2. Press the button to change audio source.
   (With RDS)
   FM1 → FM2 → FMA → AM → AMA
   → CD → USB(iPod®) → AUX → My Music → BT Audio.
   (Without RDS)
   FM1 → FM2 → AM → CD → USB(iPod®) → AUX → My Music → BT Audio.
3. Used to control volume.

4. (if equipped)
   When pressed shortly
   - Starts voice recognition
   - When selecting during a voice prompt, stops the prompt and converts to voice command waiting state

   When pressed and held
   - Ends voice recognition

5. When pressed shortly
   - When pressed in the phone screen, displays call history screen
   - When pressed in the dial screen, makes a call
   - When pressed in the incoming call screen, answers the call
   - When pressed during call waiting, switches to waiting call (Call Waiting)

When pressed and held
   - When pressed in the Bluetooth® Wireless Technology Handsfree wait mode, redials the last call
   - When pressed during a Bluetooth® Wireless Technology Handsfree call, switches call back to mobile phone (Private)

- When pressed while calling on the mobile phone, switches call back to Bluetooth® Wireless Technology Handsfree (Operates only when Bluetooth® Wireless Technology Handsfree is connected)

6. Ends phone call

Bluetooth® Wireless Technology
(Type B-1)

When No Devices have been Paired

1. Press the [PHONE] button or the [CALL] button on the steering wheel controls. The following screen is displayed.
2. Press the [OK] button to enter the Pair Phone screen.
   • Device : Name of device as shown when searching from your Bluetooth® Wireless Technology device
   • Passkey : Passkey used to pair the device

3. From your Bluetooth® Wireless Technology device (i.e. Mobile Phone), search and select your car audio system.

   ♦ SSP : Secure Simple Pairing
   Non SSP supported device :

4. After a few moments, a screen is displayed where the passkey is entered.
   Enter the passkey “0000” to pair your Bluetooth® Wireless Technology device with the car audio system.

SSP supported device :
4. After a few moments, a screen is displayed 6 digits passkey. Check the passkey on your Bluetooth® Wireless Technology device and confirm.

5. Once pairing is complete, the following screen is displayed.

Some phones (i.e., iPhone®, Android and Blackberry phones) may offer an option to allow acceptance of all future Bluetooth® connection requests by default.” and “Visit http://www.kia.com/#/bluetooth for additional information on pairing your Bluetooth®-enabled mobile phone, and to view a phone compatibility list.

**NOTICE**

If Bluetooth® Wireless Technology devices are paired but none are currently connected, pressing the [PHONE] button or the [CALL] button on the steering wheel controls displays the following screen. Press the [Pair] button to pair a new device or press the [Connect] to connect a previously paired device.

Pairing through [PHONE] Setup
Press the [SETUP] button ▶ Select [Phone]
Pair Phone
The following steps are the same as those described in the section “When No Devices have been Paired” on page 5–79.

* NOTICE

- The waiting period during phone pairing will last for one minute. The pairing process will fail if the device is not paired within the given time. If the pairing process fails, you must start the process from the beginning.

(Continued)

- Generally, most Bluetooth® Wireless Technology devices will automatically connect once pairing is complete. However, some devices may require a separate verification process to connect. Check to see whether Bluetooth® Wireless Technology has been properly connected within your mobile phone.
- List of paired Bluetooth® Wireless Technology devices can be viewed at [SETUP] ► [Phone] ► [Paired Phone List].

From the paired phone list, select the device you want to connect and press the [Connect](1) button.

* Connected Phone : Device that is currently connected.
- Paired Phone : Device that is paired but not connected.
Disconnecting a Device

From the paired phone list, select the currently connected device and press the [Disconnect](2) button.

Deleting a Device

From the paired phone list, select the device you want to delete and press the [Delete](3) button.

※ NOTICE

- When deleting the currently connected device, the device will automatically be disconnected to proceed with the deleting process.

(Continued)

- If a paired Bluetooth® Wireless Technology device is deleted, the device’s call history and phone book data will also be deleted.
- To re-use a deleted device, you must pair the device again.

Changing Priority

It is possible to pair up to five Bluetooth® Wireless Technology devices with the car audio system. The “Change Priority” feature is used to set the connection priority of paired phones. However, the most recently connected phone will always be set as the highest priority.

From the paired phone list, select the phone you want to switch to the highest priority, then press the [Change priority](4) button. The selected device will be changed to the highest priority. When a device is currently connected, even if you change the priority to a different device, the currently connected phone will always be set as the highest priority.

Phone Menu Screen

Phone Menus

With a Bluetooth® Wireless Technology device connected, press the [PHONE] button to display the Phone menu screen.
- Dial Number : Displays the dial screen where numbers can be dialed to make calls.
- Call History : Displays the call history list screen.
- Phone book : Displays the Phone book list screen.
- Setup : Displays Phone related settings.
**NOTICE**

- If you press the [Call History] button but there is no call history data, a prompt is displayed which asks whether to download call history data.
- If you press the [Phone book] button but there is no phone book data, a prompt is displayed which asks whether to download phone book data.
- This feature may not be supported in some mobile phones. For more information on download support, refer to your mobile phone user’s manual.

**Calling by Dialing a Number**

- Dial Pad : Used to enter phone number.
- Call : If a number has been entered, calls the number. If no number has been entered, switches to call history screen.
- End : Deletes the entered phone number.
- Delete : Deletes entered numbers one digit at a time.

**Answering a Call**

[Image: Phone screen showing incoming call]

Answering a call with a Bluetooth® Wireless Technology device connected will display the following screen.

- Caller : Displays the other party’s name when the incoming caller is saved within your phone book.
- Incoming Number : Displays the incoming number.
- Accept : Accepts the incoming call.
- Reject : Rejects the incoming call.

**NOTICE**

- When an incoming call pop-up is displayed, most Audio and SETUP mode features are disabled. Only the call volume will operate.
- The telephone number may not be properly displayed in some mobile phones.
- When a call is answered with the mobile phone, the call mode will automatically revert to Private mode.
During a Handsfree Call

- Caller : Displays the other party’s name if the incoming caller is saved within your phone book.
- Incoming Number : Displays the incoming number.
- Call time : Displays the call time.
- End : Ends call.
- Private : Converts to Private mode.
- Out Vol. : Sets call volume as heard by the other party.
- Mute : Turns Mic Mute On/Off.

* NOTICE

If the mic is muted, the other party will not be able to hear your voice.

Call History

A list of incoming, outgoing and missed calls is displayed. Press the [Download] button to download the call history.
- Call History :
  - Displays recent calls (call history).
  - Connects call upon selection.
- Download : Download Recent Call History.

* NOTICE

- The call history list will display up to 50 outgoing, incoming, and missed calls.
- Upon downloading call histories, previously saved histories are deleted.
- Incoming calls with hidden caller IDs will not be saved in the call history list.
- Previously saved phone book entries are stored even if a device is disconnected and re-connected.
- The download feature may not be supported in some mobile phones. Check to see that the Bluetooth® Wireless Technology device supports the download feature.
Phone Book

![Phone Book Image]

The list of saved phone book entries is displayed. Press the [Download] button to download the call history.

- **Contact List**:  
  - Displays downloaded phone book entries.
  - Connects call upon selection.
- **Download**: Download phone book entries.

**NOTICE**

- Up to 1,000 phone book entries can be copied into car phone book.

(Continued)

(Continued)

- Upon downloading phone book data, previously saved phone book data will be deleted.
- Downloading is not possible if the phone book download feature is turned off within the Bluetooth® Wireless Technology device. Also, some devices may require device authorization upon attempting to download. If downloading cannot be normally conducted, check the Bluetooth® Wireless Technology device setting or the screen state.
- Caller ID information will not be displayed for unsaved callers.
- The download feature may not be supported in some mobile phones. Check to see that the Bluetooth® Wireless Technology device supports the download feature.

**Bluetooth® Wireless Technology (Type B-3) When No Devices have been Paired**

1. Press the [PHONE] button or the [CALL] button on the steering wheel controls. The following screen is displayed.

- The download feature may not be supported in some mobile phones. Check to see that the Bluetooth® Wireless Technology device supports the download feature.

Voice Recognition Mode (if equipped)

Using Voice Recognition

Starting Voice Recognition

Shortly press the 
button on the steering wheel controls. Say a command.
If voice recognition is in [Normal Mode], then the system will say “Please say a command. Ding~”

- If voice recognition is in [Expert Mode], then the system will only say a “Ding~”

- To change the Normal Mode/Expert Mode setting, go to [SETUP] ➤ [System] ➤ [Voice Recognition System].

For proper recognition, say the command after the voice instruction and beep tone.

☆ NOTICE

Phonebook List Best Practice

1. Do not store single-name entries (e.g., “Bob”, “Mom”, “Kim”, etc.). Instead, always use full names (including first and last names) for phonebook (e.g., use “Jacob Stevenson” instead of “Dad”).

2. Do not use abbreviations (i.e., use “Lieutenant” instead of “Lt.” or “Sergeant” instead of “Sgt.”).

(Continued)
(Continued)

3. Do not use acronyms (i.e., use “County Finance Department” instead of “CFD”).

4. Do not use special characters (e.g., “@”, “hyphen –”, “asterisk *”, ampersand &”).

5. If a name is not recognized from the phonebook, change it to a more descriptive name (e.g., use “Grandpa Joseph” instead of “Pa Joe”).

Skipping Prompt Messages
While prompt message is being stated
► Shortly press the button on the steering wheel controls.
The prompt message is immediately ended and the beep tone will sound. After the “Ding”, say the voice command.

Re-starting Voice Recognition
While system waits for a command ►
Shortly press the button on the steering wheel controls.
The command wait state is immediately ended and the beep tone will sound. After the “Ding”, say the voice command.

Ending Voice Recognition
While Voice Recognition is operating ►
Press and hold the button on the steering wheel controls.
• While using voice command, pressing a steering wheel controls or a different button will end voice command.
• When the system is waiting for a voice command, say “cancel” or “end” to end voice command.
• When the system is waiting for a voice command, press and hold the button on the steering wheel controls to end voice command.

* NOTICE

Voice Recognition and Phonebook Tips
The Kia Voice Recognition System may have difficulty understanding some accents or uncommon names. When using Voice Recognition to place a call, speak in a moderate tone, with clear pronunciation.

(Continued)

To maximize the use of Voice Recognition, consider these guidelines when storing contacts:
• Do not store single-name entries (e.g., “Bob”, “Mom”, etc.) Instead, always use full names (including first and last names) for these contacts.
• Do not use special characters (e.g., '@', '-', '*', '&', etc.).
• Do not use abbreviations (i.e., use "Lieutenant" instead of "Lt.") or acronyms (i.e., use "County Finance Department" instead of "C. F. D."). Be sure to say the name exactly as it is entered in the contacts list.
Illustration on Using Voice Recognition

Starting Voice Recognition
Shortly pressing the " button:

Please say a command.  Ding~

More Help.
You can say Radio, FM, AM, Media, CD, USB, Aux, My Music, iPod®, Bluetooth® Audio, Phone, Call History or Phone book. Please say a command.

**Setup Mode (Type B-1, Type B-2)**

Press the [SETUP] button to display the Setup screen.
You can select and control options related to [Display], [Sound], [Phone] and [System].

**With the Display Button**
Press the [SETUP] button ➤ Select [Display].
You can select and control options related to [Brightness], [Pop-up Mode], [Scroll text] and [Song Info].

**Adjusting the Brightness**

Use the [Left/Right] buttons to adjust the screen brightness or set the Brightness on Automatic, Day or Night mode. Press the [Default] button to reset.
- **Automatic**: Adjusts the brightness automatically.
- **Day**: Always maintains the brightness on high.
- **Night**: Always maintains the brightness on low.

**Pop-up Mode**

This feature is used to display the Pop-up Mode screen when entering radio and media modes. When this feature is turned on, pressing the [RADIO] or [MEDIA] button will display the Pop-up Mode screen.
**NOTICE**

The media Pop-up Mode screen can be displayed only when two or more media modes have been connected.

**Scroll Text**

This feature is used to scroll text displayed on the screen when it is too long to be displayed at once. When turned on, the text is repeatedly scrolled. When turned off, the text is scrolled just once.

**Song Info**

This feature is used to change the information displayed within USB and MP3 CD modes.
- Folder File: Displays file name and folder name.
- Album Artist Song: Displays album name/artist name/song.

**With the Sound Button**

Press the [SETUP] button > Select [Sound]
You can select and control options related to [Audio Settings], [Speed Dependent Vol.], [Volume Dialogue] and [Touch Screen Beep].

**Audio Settings**

Use the [Up/Down/Left/Right] buttons to adjust the Fader/Balance settings.
Use the [Left/Right] buttons to adjust the Bass/Middle/Treble settings.
Press the [Default] button to reset.
SDVC (Speed Dependent Volume Control)

The volume level is controlled automatically according to the vehicle speed. SDVC can be set by selecting from On/Off.

Volume Dialogue (if equipped)

Use the [-], [+] buttons to adjust the Volume Dialogue.

Touch Screen Beep

This feature is used to turn the touch screen beep on/off.

With the Phone Button (if equipped)

Press the [SETUP] button ▶ Select [Phone]
You can select and control options related to [Pair Phone], [Paired Phone List], [Phone book Download], [Auto Download], [Outgoing Volume] and [Bluetooth System Off].

Pairing a New Device

Bluetooth®

Wireless Technology devices can be paired with the audio system. For more information, refer to the “Pairing through Phone Setup” on page 5-80.
Viewing Paired Phone List

This feature is used to view mobile phones that have been paired with the audio system. Upon selecting a paired phone, the setup menu is displayed. For more information, refer to the “Setting Bluetooth® Wireless Technology Connection” on page 5-81.

1. Moves to the previous screen.
2. Connect/Disconnects currently selected phone.
3. Deletes the currently selected phone.
4. Sets currently selected phone to highest connection priority.

* NOTICE

Before Downloading Phone Books

- Only phone books within connected phones can be downloaded. Also check to see that your mobile phone supports the download feature.
- To learn more about whether your mobile phone supports phone book downloads, refer to your mobile phone user’s manual.
- The Phone book for only the connected phone can be downloaded. Before downloading, check to see whether your phone supports the download feature.

As the Phone book is downloaded from the mobile phone, downloading Phone book number is displayed.

- Up to 1,000 phone book entries can be copied into car phone book.
- Up to 1,000 phone book entries can be saved for each paired device.
- Upon downloading phone book data, previously saved phone book data will be deleted. However, Phone book entries saved to other paired phones are not deleted.

Downloading Phone books
Auto Download (Phone Book)

This feature is used to automatically download mobile phone book entries once a Bluetooth® Wireless Technology phone is connected.

- The Auto Download feature will download mobile phone book entries every time the phone is connected. The download time may differ depending on the number of saved phone book entries and the communication state.
- When downloading a phone book, first check to see that your mobile phone supports the phone book download feature.

Outgoing Volume

Use the [-], [+] buttons to adjust the outgoing volume level.

Turning Bluetooth System Off

Once Bluetooth® Wireless Technology is turned off, Bluetooth® Wireless Technology related features will not be supported within the audio system. To turn Bluetooth® Wireless Technology back on, go to [SETUP] ➤ [Phone] and press “Yes”.

Audio system
CAUTION

Bluetooth® Wireless Technology audio streaming may not be supported in some Bluetooth® Wireless Technology phones.

With the System Button
Press the [SETUP] button ▶ Select [System]
You can select and control options related to [Memory Information], [Voice Recognition System] and [Language].

Memory Information

• Capacity : Displays total capacity

* May differ depending on the selected audio.

Voice Recognition Mode Setting (if equipped)

This feature displays information related to system memory.
• Using : Displays capacity currently in use

This feature is used to select the desired prompt feedback option from Normal and Expert.
• Normal : When using voice recognition, provides detailed guidance prompts
• Expert : When using voice recognition, omits some guidance prompts

Language

This feature is used to change the system and voice recognition language.
If the language is changed, the system will restart and apply the selected language.
• Language support by region
  Dansk, Deutsch, English(UK), Español, Français, Italiano, Nederlands, Русский, Polski, Svenska, Türkçe
Setup Mode (Type B-3, Type B-4)

Press the [SETUP] button to display the Setup screen. You can select and control options related to [Display], [Sound], [Phone] and [System].

**With the Display Button**
Press the [SETUP] button ➤ Select [Display]
You can select and control options related to [Brightness], [Mode Pop up], [Text Scroll] and [Media Display].

Adjusting the Brightness

Use the [Left/Right] buttons to adjust the screen brightness or set the Brightness on Automatic, Day or Night mode. Press the [Default] button to reset.
- **Automatic**: Adjusts the brightness automatically.
- **Day**: Always maintains the brightness on high.
- **Night**: Always maintains the brightness on low.

Mode Pop up

This feature is used to display the Mode Pop up screen when entering radio and media modes. When this feature is turned on, pressing the [RADIO] or [MEDIA] button will display the Mode Pop up screen.

*NOTICE*

The media Mode Pop up screen can be displayed only when two or more media modes have been connected.
Text Scroll

This feature is used to scroll text displayed on the screen when it is too long to be displayed at once. When turned on, the text is repeatedly scrolled. When turned off, the text is scrolled just once.

Media Display

This feature is used to change the information displayed within USB and MP3 CD modes.
- Folder File: Displays file name and folder name.
- Album Artist Song: Displays album name/artist name/song.

With the Sound Button
Press the [SETUP] button ➔ Select [Sound]
You can select and control options related to [Sound Setting], [Speed Dependent Vol.] and [Touch Screen Beep].

Sound Setting

Use the [Up/Down/Left/Right] buttons to adjust the Fader/Balance settings. Use the [Left/Right] buttons to adjust the Bass/Middle/Treble settings. Press the [Default] button to reset.
SDVC (Speed Dependent Volume Control)

The volume level is controlled automatically according to the vehicle speed. SDVC can be set by selecting from On/Off.

DECLARATION OF CONFORMITY

FCC
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

Caution : Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum 20cm between the and your body. This transmitter must not be collocated or operating in conjunction with any other antenna or transmitter unless authorized to do so by the FCC.

根據交通部低功率電波輻射性電機管理辦法 規定：

| 第十二條 | 經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、
          | 加大功率或變更原設計之特性及功能。          |
|----------|-------------------------------------------------|
| 第十四條 | 低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，
          | 應立即停用，並改善至無干擾時方得繼續使用。
          | 前項合法通信，指依電信法規定作業之無線電通信。
          | 低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。 |

A WARNING

ENGINE EXHAUST CAN BE DANGEROUS!

Engine exhaust fumes can be extremely dangerous. If, at any time, you smell exhaust fumes inside the vehicle, open the windows immediately.

- Do not inhale exhaust fumes.
  Exhaust fumes contain carbon monoxide, a colorless, odorless gas that can cause unconsciousness and death by asphyxiation.

- Be sure the exhaust system does not leak.
  The exhaust system should be checked whenever the vehicle is raised to change the oil or for any other purpose. If you hear a change in the sound of the exhaust or if you drive over something that strikes the underneath side of the vehicle, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

- Do not run the engine in an enclosed area.
  Letting the engine idle in your garage, even with the garage door open, is a hazardous practice. Never run the engine in your garage any longer than it takes to start the engine and back the vehicle out.

- Avoid idling the engine for prolonged periods with people inside the vehicle.
  If it is necessary to idle the engine for a prolonged period with people inside the vehicle, be sure to do so only in an open area with the air intake set at "Fresh" and fan operating at one of the higher speeds so fresh air is drawn into the interior.

If you must drive with the trunk lid (tailgate) open because you are carrying objects that make this necessary:

1. Close all windows.
2. Open side vents.
3. Set the air intake control at "Fresh", the air flow control at "Floor" or "Face" and the fan at one of the higher speeds.

To assure proper operation of the ventilation system, be sure the ventilation air intakes located just in front of the windshield are kept clear of snow, ice, leaves or other obstructions.
BEFORE DRIVING

Before entering vehicle
• Be sure that all windows, outside mirror(s), and outside lights are clean.
• Check the condition of the tires.
• Check under the vehicle for any sign of leaks.
• Be sure there are no obstacles behind you if you intend to back up.

Necessary inspections
Fluid levels, such as engine oil, engine coolant, brake fluid, and washer fluid should be checked on a regular basis, with the exact interval depending on the fluid. Further details are provided in Chapter 9, Maintenance.

(Continued)

(Continued)
take the driver’s eyes, attention and focus away from the safe operation of a vehicle or which are not permis‐sible by law should never be used during operation of the vehicle.

Before starting
• Close and lock all doors.
• Position the seat so that all controls are easily reached.
• Adjust the inside and outside rear‐view mirrors.
• Be sure that all lights work.
• Check all gauges.
• Check the operation of warning lights when the ignition switch is turned to the ON position.
• Release the parking brake and make sure the brake warning light goes out.

For safe operation, be sure you are fam‐iliar with your vehicle and its equip‐ment.

WARNING
All passengers must be properly bel‐ted whenever the vehicle is moving. Refer to “Seat belts” on page 3–19 for more information on their proper use.

WARNING
Always check the surrounding areas near your vehicle for people, espe‐cially children, before putting a vehi‐cle into D (Drive) or R (Reverse).

WARNING
Driving under the influence of alcohol or drugs
Drinking and driving is dangerous. Drunk driving is the number one con‐tributor to the highway death toll each year. Even a small amount of alcohol will affect your reflexes, per‐ceptions and judgement.

(Continued)
(Continued)
Driving while under the influence of drugs is as dangerous or more dan-
gerous than driving drunk.
You are much more likely to have a serious accident if you drink or take
drugs and drive.
If you are drinking or taking drugs, don’t drive. Do not ride with a driver
who has been drinking or taking drugs. Choose a designated driver or
call a cab.

(Continued)
• When you make a sudden stop or
turn the steering wheel rapidly,
loose objects may drop on the
floor and it could interfere with
the operation of the foot pedals,
possibly causing an accident. Keep
all things in the vehicle safely stor-
ed.
• If you do not focus on driving, it
may cause an accident. Be careful
when operating what may disturb
driving such as audio or heater. It
is the responsibility of the driver
to always drive safely.

⚠️ WARNING
• When you intend to park or stop
the vehicle with the engine on, be
careful not to depress the acceler-
ator pedal for a long period of
time. It may overheat the engine
or exhaust system and cause fire.
Whenever a front door is opened, the ignition switch will be illuminated for your convenience, provided the ignition switch is not in the ON position. The light will go off immediately when the ignition switch is turned on or go off after about 30 seconds when the door is closed.

The steering wheel locks to protect against theft. The ignition key can be removed only in the LOCK position. When turning the ignition switch to the LOCK position, push the key inward at the ACC position and turn the key toward the LOCK position.

**ACC (Accessory)**
The steering wheel is unlocked and electrical accessories are operative.

*NOTICE*
If difficulty is experienced turning the ignition switch to the ACC position, turn the key while turning the steering wheel right and left to release the tension.

**ON**
The warning lights can be checked before the engine is started. This is the normal running position after the engine is started.

Do not leave the ignition switch ON if the engine is not running to prevent battery discharge.

**START**
Turn the ignition switch to the START position to start the engine. The engine will crank until you release the key; then it returns to the ON position. The brake warning light can be checked in this position.
**WARNING**

**Ignition key**
- Never turn the ignition switch to LOCK or ACC while the vehicle is moving. This would result in loss of directional control and braking function, which could cause an accident.
- The anti-theft steering column lock is not a substitute for the parking brake. Before leaving the driver’s seat, always make sure the shift lever is engaged in 1st gear for the manual transaxle or P (Park) for the automatic transaxle / dual clutch transmission, set the parking brake fully and shut the engine off. Unexpected and sudden vehicle movement may occur if these precautions are not taken.

(Continued)

- Never reach for the ignition switch, or any other controls through the steering wheel while the vehicle is in motion. The presence of your hand or arm in this area could cause a loss of vehicle control, an accident and serious bodily injury or death.
- Do not place any movable objects around the driver’s seat as they may move while driving, interfere with the driver and lead to an accident.

**Starting the engine**

**WARNING**
- Always wear appropriate shoes when operating your vehicle. Unsuitable shoes (high heels, ski boots, etc.) may interfere with your ability to use the brake, accelerator and clutch pedal (if equipped).

(Continued)

(Continued)

- Do not start the vehicle with the accelerator pedal depressed. The vehicle can move and lead to an accident.
- Wait until the engine rpm is normal. The vehicle may suddenly move if the brake pedal is released when the rpm is high.

**Starting the gasoline engine**

1. Make sure the parking brake is applied.
2. **Manual Transaxle** - Depress the clutch pedal fully and shift the transaxle into Neutral. Keep the clutch pedal and brake pedal depressed while turning the ignition switch to the start position. **Automatic transaxle / Dual clutch transmission** - Place the transaxle shift lever in P (Park). Depress the brake pedal fully.

You can also start the engine when the shift lever is in the N (Neutral) position.
3. Turn the ignition switch to START and hold it there until the engine starts (a maximum of 10 seconds), then release the key. It should be started without depressing the accelerator pedal.

4. Do not wait for the engine to warm up while the vehicle remains stationary. Start driving at moderate engine speeds. (Steep accelerating and decelerating should be avoided.)

**Starting the diesel engine**

To start the diesel engine when the engine is cold, it has to be pre-heated before starting the engine and then have to be warmed up before starting to drive.

1. Make sure the parking brake is applied.

2. **Manual Transaxle** - Depress the clutch pedal fully and shift the transaxle into Neutral. Keep the clutch pedal and brake pedal depressed while pressing the engine start/stop button to the START position.

   **Automatic Transaxle / Dual clutch transmission** - Place the transaxle shift lever in P (Park). Depress the brake pedal fully.

   You can also start the engine when the shift lever is in the N (Neutral) position.

3. Turn the ignition switch to the ON position to pre-heat the engine. Then the glow indicator light will illuminate.

4. If the glow indicator light goes out, turn the ignition switch to the START position and hold it there until the engine starts (a maximum of 10 seconds), then release the key.

**NOTICE**

If the engine does not start within 10 seconds after the preheating is completed, turn the ignition key once more to the LOCK position for 10 seconds, and then to the ON position, in order to preheat again.

**Starting and stopping the engine for turbocharger intercooler**

1. Do not race or accelerate the engine immediately after starting. If the engine is cold, idle for several seconds before sufficient lubrication is ensured in the turbocharger unit.
2. After high speed or extended driving, requiring a heavy engine load, idle the engine about 1 minute before turning it off. This idle time will allow the turbocharger to cool prior to shutting the engine off.

⚠️ CAUTION

Do not turn the engine off immediately after it has been subjected to a heavy load. Doing so may cause severe damage to the engine or turbocharger unit.

⚠️ CAUTION

If the engine stalls while you are in motion, do not attempt to move the shift lever to the P (Park) position. If traffic and road conditions permit, you may put the shift lever in the N (Neutral) position while the vehicle is still moving and turn the ignition switch to the START position in an attempt to restart the engine.

⚠️ CAUTION

- Do not engage the starter for more than 10 seconds. If the engine stalls or fails to start, wait 5 to 10 seconds before re-engaging the starter. Improper use of the starter may damage it.
- Do not turn the ignition switch to the START position with the engine running. It may damage the starter.

Stopping the gasoline engine/diesel engine (Manual Transaxle)

1. Make sure the vehicle is completely stopped and keep the clutch pedal and brake pedal depressed.
2. Shift the transaxle into Neutral while depressing the clutch pedal and brake pedal.
3. Engage the parking brake while depressing the brake pedal.
4. Turn the ignition key to the LOCK position and remove it.
**ENGINE START/STOP BUTTON (IF EQUIPPED)**

**Illuminated engine start/stop button**

Whenever the front door is opened, the engine start/stop button will illuminate for your convenience. The light will go off after about 30 seconds when the door is closed. It will also go off immediately when the theft-alarm system is armed.

**Engine start/stop button position**

- **OFF**
  
  **With manual transaxle**
  
  To turn off the engine (START/RUN position) or vehicle power (ON position), stop the vehicle then press the engine start/stop button.
  
  **With automatic transaxle / dual clutch transmission**
  
  To turn off the engine (START/RUN position) or vehicle power (ON position), press the engine start/stop button with the shift lever in the P (Park) position. When you press the engine start/stop button without the shift lever in the P (Park) position, the engine start/stop button will not change to the OFF position but to the ACC position.

  **Vehicles equipped with anti-theft steering column lock**
  
  The steering wheel locks when the engine start/stop button is in the OFF position to protect you against theft. It locks when the door is opened.

**NOTICE**

If the steering wheel is not locked properly when you open the driver’s door, the warning chime will sound. Try locking the steering wheel again. If the problem is not solved, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

In addition, if the engine start/stop button is in the OFF position after the driver’s door is opened, the steering wheel will not lock and the warning chime will sound. In such a situation, close the door. Then the steering wheel will lock and the warning chime will stop.

If the steering wheel doesn’t unlock properly, the engine start/stop button will not work. Press the engine start/stop button while turning the steering wheel right and left to release the tension.
\* \textbf{NOTICE}

You are able to turn off the engine (START/RUN) or vehicle power (ON), only when the vehicle is not in motion.

\textbf{CAUTION}

In an emergency situation while the vehicle is in motion, you are able to turn the engine off and to the ACC position by pressing the engine start/stop button for more than 2 seconds or 3 times successively within 3 seconds. If the vehicle is still moving, to restart the vehicle:

- Manual transaxle - Press the ENGINE START/STOP button with shift lever in neutral and clutch pedal depressed.
- Automatic transaxle / Dual clutch transmission - Press the ENGINE START/STOP button when vehicle speed is 5 km/h or over.

\textbf{ACC} (Accessory)

\textbf{With manual transaxle}

Press the engine start/stop button when the button is in the OFF position without depressing the clutch pedal.

\textbf{With automatic transaxle / dual clutch transmission}

Press the engine start/stop button while it is in the OFF position without depressing the brake pedal. The steering wheel unlocks and electrical accessories are operational. If the engine start/stop button is in the ACC position for more than 1 hour, the button is turned off automatically to prevent battery discharge. The warning lights can be checked before the engine is started. Do not leave the engine start/stop button in the ON position for a long time. The battery may discharge, because the engine is not running.

\textbf{START/RUN}

\textbf{With manual transaxle}

To start the engine, depress the clutch pedal and brake pedal, then press the engine start/stop button with the shift lever in the N (Neutral) position.

\textbf{With automatic transaxle / dual clutch transmission}

To start the engine, depress the brake pedal and press the engine start/stop button with the shift lever in the P (Park) or the N (Neutral) position. For your safety, start the engine with the shift lever in the P (Park) position.

\* \textbf{NOTICE}

If you press the engine start/stop button without depressing the clutch pedal for manual transaxle (Continued)
Driving your vehicle

(Continued)
vehicles or without depressing the brake pedal for automatic trans-
axle / dual clutch transmission vehi-
cles, the engine will not start and the engine start/stop button changes as follow:
OFF ➔ ACC ➔ ON ➔ OFF or ACC

* NOTICE
If you leave the engine start/stop button in the ACC or ON position for a long time, the battery will dis-
charge.

** WARNING
• Never press the engine start/stop button while the vehicle is in mo-
tion. This would result in loss of di-
rectional control and braking func-
tion, which could cause an acci-
dent.
(Continued)

(Continued)
• The anti-theft steering column lock is not a substitute for the parking brake. Before leaving the driver’s seat, always make sure the shift lever is engaged in P (Park), set the parking brake fully and shut the engine off. Unexpec-
ted and sudden vehicle movement may occur if these precautions are not taken.
• Never reach for the engine start / stop button or any other controls through the steering wheel while the vehicle is in motion. The pres-
ence of your hand or arm in the area could cause loss of vehicle control, an accident and serious bodily injury or death.
• Do not place any movable objects around the driver’s seat as they may move while driving, interfere with the driver and lead to an acci-
dent.

Starting the engine

** WARNING
• Always wear appropriate shoes when operating your vehicle. Un-
suitable shoes (high heels, ski boots, etc.) may interfere with your ability to use the brake, ac-
celerator and clutch pedal.
• Do not start the vehicle with the accelerator pedal depressed. The vehicle can move and lead to an accident.
• Wait until the engine rpm is nor-
mal. The vehicle may suddenly move if the brake pedal is released when the rpm is high.

* NOTICE
• Kick down mechanism
Use the kick down mechanism for maximum acceleration. Depress the accelerator pedal beyond the pres-
sure point. The automatic transmis-
(Continued)
(Continued)

sion will shift to a lower gear depending on the engine speed.

**Starting the gasoline engine**
1. Carry the smart key or leave it inside the vehicle.
2. Make sure the parking brake is firmly applied.
3. **Manual Transaxle** - Depress the clutch pedal fully and shift the transaxle into Neutral. Keep the clutch pedal and brake pedal depressed while starting the engine.
   **Automatic transaxle / Dual clutch transmission** - Place the transaxle shift lever in P (Park). Depress the brake pedal fully.
   *You can also start the engine when the shift lever is in the N (Neutral) position.*
4. Press the engine start/stop button.
   *It should be started without depressing the accelerator pedal.*

5. Do not wait for the engine to warm up while the vehicle remains stationary. Start driving at moderate engine speeds. (Steep accelerating and decelerating should be avoided.)

**Starting the diesel engine**
To start the diesel engine when the engine is cold, it has to be pre-heated before starting the engine and then have to be warmed up before starting to drive.
1. Make sure the parking brake is applied.
2. **Manual Transaxle** - Depress the clutch pedal fully and shift the transaxle into Neutral. Keep the clutch pedal and brake pedal depressed while pressing the engine start/stop button to the START position.
   **Automatic Transaxle / Dual clutch transmission** - Place the transaxle shift lever in P (Park). Depress the brake pedal fully.
   *You can also start the engine when the shift lever is in the N (Neutral) position.*
3. Press the engine start/stop button while depressing the brake pedal.
4. Continue depressing the brake pedal until the illuminated glow indicator goes off. (approximately 5 seconds)
5. The engine starts running when the glow indicator goes off.

*NOTICE*

If the engine start/stop button is pressed once more while the engine is pre-heating, the engine may start.
Starting and stopping the engine for turbocharger intercooler

1. Do not race or accelerate the engine immediately after starting. If the engine is cold, idle for several seconds before sufficient lubrication is ensured in the turbocharger unit.

2. After high speed or extended driving, requiring a heavy engine load, idle the engine about 1 minute before turning it off. This idle time will allow the turbocharger to cool prior to shutting the engine off.

• When the engine start/stop button is in the ACC position or above, if any door is opened, the system checks for the smart key. If the smart key is not in the vehicle, the “.Socket” indicator and a message “Key is not in the vehicle” will appear on the instrument cluster and LCD window. And if all doors are closed, the chime will sound for 5 seconds. The indicator or warning will turn off while the vehicle is moving. Always have the smart key with you.

⚠️ CAUTION

Do not turn the engine off immediately after it has been subjected to a heavy load. Doing so may cause severe damage to the engine or turbocharger unit.

Starting the engine with smart key

• Even if the smart key is in the vehicle, if it is far away from you, the engine may not start.

(Continued)

(Continued)

inations permit, you may put the shift lever in the N (Neutral) position while the vehicle is still moving and press the engine start/stop button in an attempt to restart the engine.

⚠️ WARNING

The engine will start, only when the smart key is in the vehicle. Never allow children or any person who is unfamiliar with the vehicle to touch the engine start/stop button or related parts.

⚠️ CAUTION

If the engine stalls while the vehicle is in motion, do not attempt to move the shift lever to the P (Park) position. If the traffic and road condi-
**NOTICE**

- If the battery is weak or the smart key does not work correctly, you can start the engine by pressing the engine start/stop button with the smart key.
  The side with the lock button should contact the engine start/stop button directly. When you press the engine start/stop button directly with the smart key, the smart key should contact the button at a right angle.

- When the stop lamp fuse is blown, you cannot start the engine normally.
  Replace the fuse with a new one. If it is not possible, you can start the engine by pressing the engine start/stop button for 10 seconds while it is in the ACC position. The engine can start without depressing the brake pedal. But for your safety always depress the brake pedal and clutch pedal (if equipped) before starting the engine.

**CAUTION**

- Do not press the engine start/stop button for more than 10 seconds except when the stop lamp fuse is blown.
- Do not turn the ignition switch to the START position with the engine running. It may damage the starter.

**Stopping the gasoline engine/diesel engine (Manual Transaxle)**

1. Make sure the vehicle is completely stopped and keep the clutch pedal and brake pedal depressed.
2. Shift the transaxle into Neutral while depressing the clutch pedal and brake pedal.
3. Engage the parking brake while depressing the brake pedal.
4. Turn the ignition key to the LOCK position and remove it.
If your vehicle is equipped with an ignition lock switch, the engine will not start when starting the engine without depressing the clutch pedal. The gearshift lever must be returned to the neutral position before shifting into R (Reverse). The button (1) located immediately below the shift knob must be pulled upward while moving the shift lever to the R position.

Make sure the vehicle is completely stopped before shifting into R (Reverse).

Never operate the engine with the tachometer (rpm) in the red zone.

**CAUTION**

- When downshifting from fifth gear to fourth gear, caution should be taken not to inadvertently press the gear shift lever sideways in such a manner that second gear is engaged. Such a drastic downshift may cause the engine speed to increase to the point that the tachometer will enter the red zone. Such over-revving of the engine may possibly cause engine and transaxle damage.

- Do not downshift more than 2 gears or downshift the gear when the engine is running at high speed (5,000 RPM or higher). Such a downshifting may damage the engine, clutch and the transaxle.

- When shifting from 5th gear to 6th gear or from 6th gear to 5th gear, push the shift lever to the right while shifting. Otherwise, the shift lever might move to 3rd gear or 4th gear and it may damage the engine and transaxle.

(Continued)
• Do not exceed the maximum load limit. When an overloaded vehicle is in motion, the extra load will put excessive pressure on the clutch disk and cause overheating. This may damage the clutch cover and clutch disc.

• During cold weather, shifting may be difficult until the transaxle lubricant has warmed up. This is normal and not harmful to the transaxle.

• If you've come to a complete stop and it's hard to shift into 1st or R (Reverse), put the shift lever in N (Neutral) position and release the clutch. Press the clutch pedal back down, and then shift into 1st or R (Reverse) gear position.

\[ CAUTION \]

• To avoid premature clutch wear and damage, do not drive with your foot resting on the clutch pedal. Also, don't use the clutch to hold the vehicle stopped on an uphill grade, while waiting for a traffic light, etc.

• To prevent possible damage to the clutch system, do not start with the 2nd (second) gear engaged except when you start on a slippery road.

• Do not use the shift lever as a handrest during driving, as this can result in premature wear of the transaxle shift forks.

• When operating the clutch pedal, press the clutch pedal down fully. If you don't press the clutch pedal fully, the clutch may be damaged or noise may occur.

\[ WARNING \]

• Before leaving the driver’s seat, always set the parking brake fully and shut the engine off. Then make sure the transaxle is shifted into 1st gear when the vehicle is parked on a level or uphill grade, and shifted into R (Reverse) on a downhill grade. Unexpected and sudden vehicle movement can occur if these precautions are not followed in the order identified.

• Do not use the engine brake (shifting from a high gear to lower gear) rapidly on slippery roads. The vehicle may slip causing an accident.

• If your vehicle has a manual transaxle not equipped with a ignition lock switch, it may move and cause a serious accident when starting the engine without depressing the clutch pedal while the parking brake is released and the shift lever not in the N (Neutral) position.

(Continued)
Using the clutch
The clutch should be pressed all the way to the floor before shifting, then released slowly. The clutch pedal should always be fully released while driving. Do not rest your foot on the clutch pedal while driving. This can cause unnecessary wear. Do not partially engage the clutch to hold the car on an incline. This causes unnecessary wear. Use the foot brake or parking brake to hold the car on an incline. Do not operate the clutch pedal rapidly and repeatedly.

Downshifting
When you must slow down in heavy traffic or while driving up steep hills, downshift before the engine starts to labor. Downshifting reduces the chance of stalling and gives better acceleration when you again need to increase your speed. When the vehicle is traveling down steep hills, downshifting helps maintain safe speed and prolongs brake life.

Good driving practices
• Never take the vehicle out of gear and coast down a hill. This is extremely hazardous. Always leave the vehicle in gear.
• Don't "ride" the brakes. This can cause them to overheat and malfunction. Instead, when you are driving down a long hill, slow down and shift to a lower gear. When you do this, engine braking will help slow down the vehicle.
• Slow down before shifting to a lower gear. This will help avoid over-revving the engine, which can cause damage.
• Slow down when you encounter cross winds. This gives you much better control of your vehicle.
• Be sure the vehicle is completely stopped before you attempt to shift into reverse. The transaxle can be damaged if you do not. To shift into reverse, depress the clutch, move the shift lever to neutral, then shift to the reverse position.
• Exercise extreme caution when driving on a slippery surface. Be especially careful when braking, accelerating or shifting gears. On a slippery surface, an abrupt change in vehicle speed can cause the drive wheels to lose traction and the vehicle to go out of control.

⚠️ WARNING
• Always buckle-up! In a collision, an unbelted occupant is significantly more likely to be seriously injured or killed than a properly belted occupant.
• Avoid high speeds when cornering or turning.
• Do not make quick steering wheel movements, such as sharp lane changes or fast, sharp turns.
(Continued)

• The risk of rollover is greatly increased if you lose control of your vehicle at highway speeds.

• Loss of control often occurs if two or more wheels drop off the roadway and the driver oversteers to reenter the roadway.

• In the event your vehicle leaves the roadway, do not steer sharply. Instead, slow down before pulling back into the travel lanes.

• Never exceed posted speed limits.
Automatic transaxle operation
The automatic transaxle has 6 forward speeds and one reverse speed. The individual speeds are selected automatically, depending on the position of the shift lever.

※ NOTICE
The first few shifts on a new vehicle, if the battery has been disconnected, may be somewhat abrupt. This is a normal condition, and the shifting sequence will adjust after shifts are cycled a few times by the TCM (Transaxle Control Module) or PCM (Powertrain Control Module).

For smooth operation, depress the brake pedal when shifting from N (Neutral) to a forward or reverse gear.

WARNING
- Automatic transaxle (Continued)
(Continued)
- Always check the surrounding areas near your vehicle for people, especially children, before shifting a car into D (Drive) or R (Reverse).
- Before leaving the driver’s seat, always make sure the shift lever is in the P (Park) position; then set the parking brake fully and shut the engine off. Unexpected and sudden vehicle movement can occur if these precautions are not followed in the order identified.
- Do not use the engine brake (shifting from a high gear to lower gear) rapidly on slippery roads. The vehicle may slip causing an accident.

⚠️ CAUTION
- To avoid damage to your transaxle, do not accelerate the engine in R (Reverse) or any forward gear position with the brakes on.

(Continued)
- When stopped on an incline, do not hold the vehicle stationary with engine power. Use the service brake or the parking brake.
- Do not shift from N (Neutral) or P (Park) into D (Drive), or R (Reverse) when the engine is above idle speed.

Transaxle ranges
The indicator in the instrument cluster displays the shift lever position when the ignition switch is in the ON position.

P (Park)
Always come to a complete stop before shifting into P (Park). This position locks the transaxle and prevents the front wheels from rotating.

⚠️ WARNING
- Shifting into P (Park) while the vehicle is in motion will cause the drive wheels to lock which will cause you to lose control of the vehicle.

(Continued)
- Do not use the P (Park) position in place of the parking brake. Always make sure the shift lever is latched in the P (Park) position and set the parking brake fully.
- Never leave a child unattended in a vehicle.

⚠️ CAUTION
The transaxle may be damaged if you shift into P (Park) while the vehicle is in motion.

R (Reverse)
Use this position to drive the vehicle backward.

⚠️ CAUTION
Always come to a complete stop before shifting into or out of R (Reverse); you may damage the transaxle if you shift into R while the vehicle is in motion, except as ex-
Driving your vehicle

(Continued)

plained in “Rocking the vehicle” on page 6-62.

N (Neutral)
The wheels and transaxle are not engaged. The vehicle will roll freely even on the slightest incline unless the parking brake or service brakes are applied.

**WARNING**

Do not drive with the shift lever in N (Neutral). The engine brake will not work and lead to an accident.

- Parking in N (Neutral) gear

Follow below steps when parking and you want the vehicle to move when pushed.

1. After parking your vehicle, step on the brake pedal and move the shift lever to "P" with the ignition button in "ON" or while the engine is running.
2. If the parking brake is applied unlock the parking brake.

3. While pressing the brake pedal, turn the ignition button "OFF".
   - For smart key equipped vehicles, the ignition switch can be moved to "OFF" only when the shift lever is in "P".

4. Change the gear shift lever to "N" (Neutral) while pressing the brake pedal and pushing "SHIFT LOCK RELEASE" button or inserting, pressing down a tool (e.g. flathead screw-driver) into the "SHIFT LOCK RELEASE" access hole at the same time. Then, the vehicle will move when external force is applied.

**CAUTION**

- With the exception of parking in neutral gear, always park the vehicle in "P" (Park) for safety and engage the parking brake.
- Before parking in "N" (Neutral) gear, first make sure the parking ground is level and flat. Do not park in "N" gear on any slopes or gradients. If parked and left in "N", the vehicle may move and cause serious damage and injury.

**D (Drive)**

This is the normal forward driving position. The transaxle will automatically shift through a 6-gear sequence, providing the best fuel economy and power. For extra power when passing another vehicle or climbing grades, depress the accelerator fully, at which time the transaxle will automatically downshift to the next lower gear.

* **NOTICE**

Always come to a complete stop before shifting into D (Drive).
To return to D (Drive) range operation, backwards and forwards will allow gearshifts with the accelerator pedal depressed.  

When the vehicle is stationary or in motion, sports mode is selected by pushing the shift lever from the D (Drive) position into the manual gate. To return to D (Drive) range operation, push the shift lever back into the main gate. In sports mode, moving the shift lever backwards and forwards will allow you to make gearshifts rapidly. In contrast to a manual transaxle, the sports mode allows gearshifts with the accelerator pedal depressed.

Up (+) : Push the lever forward once to shift up one gear.

Down (-) : Pull the lever backwards once to shift down one gear.

* NOTICE

- In sports mode, the driver must execute upshifts in accordance with road conditions, taking care to keep the engine speed below the red zone.
- In sports mode, only the 6 forward gears can be selected. To reverse or park the vehicle, move the shift lever to the R (Reverse) or P (Park) position as required.
- In sports mode, downshifts are made automatically when the vehicle slows down. When the vehicle stops, 1st gear is automatically selected.
- In sports mode, when the engine rpm approaches the red zone shift points are varied to upshift automatically.

(Continued)

- To maintain the required levels of vehicle performance and safety, the system may not execute certain gearshifts when the shift lever is operated.
- When driving on a slippery road, push the shift lever forward into the +(up) position. This causes the transaxle to shift into the 2nd gear which is better for smooth driving on a slippery road. Push the shift lever to the -(down) side to shift back to the 1st gear.

(Continued)
**Paddle shifter (if equipped)**

The paddle shifter is available when the shift lever is in the D position or the sport mode.

**With the shift lever in the D position**
The paddle shifter can operate when the vehicle speed is more than 10km/h. Pull the [+] or [-] paddle shifter once to shift up or down one gear and the system changes from automatic mode to manual mode.

**With the shift lever in the sports mode**
Pull the [+] or [-] paddle shifter once to shift up or down one gear.

* **NOTICE**
If you pull the [+] and [-] paddle shifters at the same time, you can’t shift the gear.

**Shift lock system (if equipped)**
For your safety, the automatic transaxle has a shift lock system which prevents shifting the transaxle from P (Park) into R (Reverse) unless the brake pedal is depressed.
To shift the transaxle from P (Park) into R (Reverse):
1. Depress and hold the brake pedal.
2. Start the engine or turn the ignition switch to the ON position.

If the vehicle speed is lower than 10km/h, if you depressing the accelerator pedal for more than 5 seconds or if you shift the shift lever from D to sports mode and shift it from sports mode to D again, the system change from manual mode to automatic mode.

3. Move the shift lever.

If the brake pedal is repeatedly depressed and released with the shift lever in the P (Park) position, a chattering noise near the shift lever may be heard. This is a normal condition.

**WARNING**
Always fully depress the brake pedal before and while shifting out of the P (Park) position into another position to avoid inadvertent motion of the vehicle which could injure persons in or around the vehicle.
Shift-lock override

If the shift lever cannot be moved from the P (Park) position into R (Reverse) position with the brake pedal depressed, continue depressing the brake, then do the following:
1. Place the ignition switch in the LOCK/OFF position.
2. Apply the parking brake.
3. Carefully remove the cap (1) covering the shift-lock release access hole.
4. Insert a tool (e.g. flathead screwdriver) into the access hole and press down on the tool.
5. Move the shift lever.
6. Remove the tool from the shiftlock override access hole then install the cap.
7. Have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Ignition key interlock system (if equipped)
The ignition key cannot be removed unless the shift lever is in the P (Park) position.

Good driving practices
• Never move the shift lever from P (Park) or N (Neutral) to any other position with the accelerator pedal depressed.
• Never move the shift lever into P (Park) when the vehicle is in motion.
• Be sure the vehicle is completely stopped before you attempt to shift into R (Reverse) or D (Drive).
• Never take the vehicle out of gear and coast down a hill. This may be extremely hazardous. Always leave the vehicle in gear when moving.

• Do not "ride" the brakes. This can cause them to overheat and malfunction. Instead, when you are driving down a long hill, slow down and shift to a lower gear. When you do this, engine braking will help slow down the vehicle.
• Slow down before shifting to a lower gear. Otherwise, the lower gear may not be engaged.
• Always use the parking brake. Do not depend on placing the transaxle in P (Park) to keep the vehicle from moving.
• Exercise extreme caution when driving on a slippery surface. Be especially careful when braking, accelerating or shifting gears. On a slippery surface, an abrupt change in vehicle speed can cause the drive wheels to lose traction and the vehicle to go out of control.
• Optimum vehicle performance and economy is obtained by smoothly depressing and releasing the accelerator pedal.
Driving your vehicle

**WARNING**

- Always buckle-up! In a collision, an unbelted occupant is significantly more likely to be seriously injured or killed than a properly belted occupant.
- Avoid high speeds when cornering or turning.
- Do not make quick steering wheel movements, such as sharp lane changes or fast, sharp turns.
- The risk of a rollover is greatly increased if you lose control of your vehicle at highway speeds.
- Losing control often occurs if two or more wheels drop off the roadway and the driver oversteers to reenter the roadway.
- In the event your vehicle leaves the roadway, do not steer sharply. Instead, slow down before pulling back into the travel lanes.
- Never exceed posted speed limits.

**WARNING**

If your vehicle becomes stuck in snow, mud, sand, etc., then you may attempt to rock the vehicle free by moving it forward and backward. Do not attempt this procedure if people or objects are anywhere near the vehicle. During the rocking operation the vehicle may suddenly move forward or backward as it becomes unstuck, causing injury or damage to nearby people or objects.

**Moving up a steep grade from a standing start**

To move up a steep grade from a standing start, depress the brake pedal, shift the shift lever to D (Drive). Select the appropriate gear depending on load weight and steepness of the grade, and release the parking brake. Depress the accelerator gradually while releasing the service brakes.

When accelerating from a stop on a steep hill, the vehicle may have a tendency to roll backwards. Shifting the shift lever into 2 (Second Gear) will help prevent the vehicle from rolling backwards.
DUAL CLUTCH TRANSMISSION (DCT) (IF EQUIPPED)

Depress the brake pedal and the lock release button when shifting. (If the shift lock system is not equipped, it is not necessary to depress the brake pedal. However, it is recommended to depress the brake pedal to avoid inadvertent movement of the vehicle.)

Press the lock release button when shifting.

The shift lever can be shifted freely.

Dual clutch transmission operation
The dual clutch transmission has seven forward speeds and one reverse speed. The individual speeds are selected automatically in the D (Drive) position.

⚠️ WARNING
To reduce the risk of serious injury or death:
• ALWAYS check the surrounding areas near your vehicle for people, especially children, before shifting a vehicle into D (Drive) or R (Reverse).
• Before leaving the driver’s seat, always make sure the shift lever is in the P (Park) position, then set the parking brake, and place the ignition switch in the LOCK/OFF position. Unexpected and sudden vehicle movement can occur if these precautions are not followed.
• Do not use engine braking (shifting from a high gear to lower gear) rapidly on slippery roads. The vehicle may slip causing an accident.
Driving your vehicle

- The Dual Clutch Transmission gives the driving feel of a manual transmission, yet provides the ease of a fully automatic transmission. Unlike a traditional automatic transmission, the gear shifting can be felt (and heard) on the dual clutch transmission.
  - Think of it as an automatically shifting manual transmission.
  - Shift into Drive range and get fully automatic shifting, similar to a conventional automatic transmission.
- Dual clutch transmission adopts dry-type dual clutch, which is different from torque converter of automatic transmission, and shows better acceleration performance during driving. But, initial launch might be a bit slower than Automatic Transmission.
- The dry-type clutch transfers torque and provides a direct driving feeling which may feel different from a conventional automatic transmission with a torque converter. This may be more noticeable when starting from a stop or low vehicle speed.

- When rapidly accelerating at low vehicle speed, engine could rev at high rpm depending on vehicle drive condition.
- For smooth launch uphill, press down the accelerator pedal smoothly depending on the current conditions.
- If you release your foot from the accelerator pedal at low vehicle speed, you may feel strong engine brake, which is similar to manual transmission.
- When driving downhill, you may use Sports Mode and press the paddle shifters to downshift to a lower gear in order to control your speed without using the brake pedal excessively.
- When you turn the engine on and off, you may hear clicking sounds as the system goes through a self test. This is a normal sound for the Dual Clutch Transmission.

(Continued)
checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ CAUTION

- Using brakes on a steep grade
To hold the vehicle on a hill use the foot or parking brake. If the vehicle is held by applying the accelerator pedal on a hill, the clutch and transmission will be overheated resulting in damage. Then a time, a warning message "Steep grade! Press brake pedal" will appear on the LCD window and you may feel a some vibration.

⚠️ CAUTION

- Overheated Dual clutch transmission
If a vehicle on a steep grade is held by using the accelerator pedal or repeated kick down driving mecha-
(Continued)

nism, the transmission clutch could overheat. This overuse of transmis-
sion leads to vibration or shudder and a shift indicator on LCD will blink and LCD warning message "Transmission temp. is high! Stop Safely" will appear also. Then, clutch protection mode will ac-
tivate and the clutch will be disabled until the temperature returns to normal. Quickly pull over to a safe level ground, shift to Park and apply the foot brake with engine ON until the LCD warning messages disappears. If you ignore the warning, the transmission may be damaged. Gear shifts may be more recogniz-
able than conventional automatic transmission. This is normal for dual clutch transmission. If the shift indicator continues to blink, have your vehicle inspected by a professional workshop. Kia recom-
mends to contact an authorized Kia dealer/service partner.

⚠️ CAUTION

- Dual Clutch Transmission Kick-
down
The overheated Dual clutch trans-
mission may change the gear shifting characteristics, and illuminate the warning message on the LCD window when kickdown mechanism is repetitively used. Do not use the kickdown mechanism to return to normal driving condition. Also, temporarily stop the vehicle at a safe location, when the LCD warning illuminates.

⚠️ CAUTION

- Usage of the shift lever during Break-in period
(Continued)

(Continued)

• During the first 1,500 km (1,000) miles of driving this vehi-
cle, when accelerating from low speed, the performance may not feel smooth. It is because during this break-in period, the shift quality and performance of your new vehicle is continuously opti-
mized.

• Always come to a complete stop before shifting into Drive or Re-
verse.

• Do not put the shift lever in Neu-
tral while driving.

The indicator in the instrument cluster displays the shift lever position when the ignition switch is in the ON position.

**P (Park)**
Always come to a complete stop before shifting into P (Park). To shift from P (Park), you must de-
press firmly on the brake pedal and make sure your foot is off the accelerator pedal. The shift lever must be in P (Park) before turning the engine off.
**WARNING**

- Shifting into P (Park) while the vehicle is in motion may cause you to lose control of the vehicle.
- After the vehicle has stopped, always make sure the shift lever is in P (Park), apply the parking brake, and turn the engine off.
- Do not use the P (Park) position in place of the parking brake.

**R (Reverse)**

Use this position to drive the vehicle backward.

**CAUTION**

Always come to a complete stop before shifting into or out of R (Reverse); you may damage the transmission if you shift into R (Reverse) while the vehicle is in motion.

**N (Neutral)**

The wheels and transmission are not engaged.

Use N (Neutral) if you need to restart a stalled engine, or if it is necessary to stop with the engine ON. Shift into P (Park) if you need to leave your vehicle for any reason. Always depress the brake pedal when you are shifting from N (Neutral) to another gear.

**WARNING**

Do not shift into gear unless your foot is firmly on the brake pedal. Shifting into gear when the engine is running at high speed can cause the vehicle to move very rapidly. You could lose control of the vehicle and hit people or objects.

**WARNING**

Do not drive with the shift lever in N (Neutral). The engine brake will not work and lead to an accident.

-Parking in N (Neutral) gear

Follow below steps when parking and you want the vehicle to move when pushed.

1. After parking your vehicle, step on the brake pedal and move the shift lever to "P" with the ignition button in "ON" or while the engine is running.
2. If the parking brake is applied unlock the parking brake.
3. While pressing the brake pedal, turn the ignition button "OFF".
   - For smart key equipped vehicles, the ignition switch can be moved to "OFF" only when the shift lever is in "P".
4. Change the gear shift lever to "N" (Neutral) while pressing the brake pedal and pushing "SHIFT LOCK RELEASE" button or inserting, pressing down a tool (e.g. flathead screw-driver) into the "SHIFT LOCK RELEASE" access hole at the same time. Then, the vehicle will move when external force is applied.
CAUTION

• With the exception of parking in neutral gear, always park the vehicle in "P" (Park) for safety and engage the parking brake.
• Before parking in "N" (Neutral) gear, first make sure the parking ground is level and flat. Do not park in "N" gear on any slopes or gradients.
  If parked and left in "N", the vehicle may move and cause serious damage and injury.

D (Drive)
This is the normal driving position. The transmission will automatically shift through a seven-gear sequence, providing the best fuel economy and power.
For extra power when passing another vehicle or driving uphill depress the accelerator pedal further until you feel the transmission downshift to a lower gear.

Manual mode

Whether the vehicle is stationary or in motion, manual mode is selected by pushing the shift lever from the D (Drive) position into the manual gate.
To return to D (Drive) range operation, push the shift lever back into the main gate.
In manual mode, moving the shift lever backwards and forwards will allow you to select the desired range of gears for the current driving conditions.
+ (Up) : Push the lever forward once to shift up one gear.
- (Down) : Pull the lever backwards once to shift down one gear.

NOTICE

• Only the seven forward gears can be selected. To reverse or park the vehicle, move the shift lever to the R (Reverse) or P (Park) position as required.
• Downshifts are made automatically when the vehicle slows down. When the vehicle stops, 1st gear is automatically selected.
• When the engine rpm approaches the red zone the transmission will upshift automatically.
• If the driver presses the lever to + (Up) or - (Down) position, the transmission may not make the requested gear change if the next gear is outside of the allowable engine rpm range. The driver must execute upshifts in accordance with road conditions, taking care to keep the engine rpms below the red zone.

**Paddle shifter (if equipped)**

The paddle shifter is available when the shift lever is in the D (Drive) position or the manual mode.

**With the shift lever in the D position**

The paddle shifter will operate when the vehicle speed is more than 10km/h. Pull the [+\-] paddle shifter once to shift up or down one gear and the system changes from automatic mode to manual mode.

When the vehicle speed is lower than 10km/h, if you depress the accelerator pedal for more than 5 seconds or if you shift the shift lever from D (Drive) to manual mode and shift it from manual mode to D (Drive) again, the system changes from manual mode to automatic mode.

**With the shift lever in the manual mode**

Pull the [+\-] paddle shifter once to shift up or down one gear.

**NOTICE**

If you pull the [+\-] paddle shifters at the same time, you cannot shift the gear.

**Shift lock system**

For your safety, the Dual clutch transmission has a shift lock system which prevents shifting the transaxle from P (Park) into R (Reverse) unless the brake pedal is depressed.

To shift the transaxle from P (Park) into R (Reverse):

1. Depress and hold the brake pedal.
2. Start the engine or turn the ignition switch to the ON position.
3. Move the shift lever.

If the brake pedal is repeatedly depressed and released with the shift lever in the P (Park) position, a chattering noise & vibration near the shift lever may be heard. This is a normal condition.

**WARNING**

Always fully depress the brake pedal before and while shifting out of the P (Park) position into another position to avoid inadvertent motion of the vehicle which could injure persons in or around the car.
Shift-lock override

If the shift lever cannot be moved from the P (Park) position into R (Reverse) position with the brake pedal depressed, continue depressing the brake, then do the following:

1. Place the ignition switch in the LOCK/OFF position.
2. Apply the parking brake.
3. Carefully remove the cap (1) covering the shift-lock release access hole.
4. Insert a tool (e.g. flathead screwdriver) into the access hole and press down on the tool.
5. Move the shift lever.
6. Remove the tool from the shiftlock override access hole then install the cap.
7. Have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Ignition key interlock system (if equipped)
The ignition key cannot be removed unless the shift lever is in the P (Park) position.

Good driving practices

- Never move the shift lever from P (Park) or N (Neutral) to any other position with the accelerator pedal depressed.
- Never move the shift lever into P (Park) when the vehicle is in motion.
- Be sure the car is completely stopped before you attempt to shift into R (Reverse) or D (Drive).
- Never take the car out of gear and coast down a hill. This may be extremely hazardous. Always leave the car in gear when moving.
- Do not "ride" the brakes. This can cause them to overheat and malfunction. Instead, when you are driving down a long hill, slow down and shift to a lower gear. When you do this, engine braking will help slow the car.
- Slow down before shifting to a lower gear. Otherwise, the lower gear may not be engaged.
- Always use the parking brake. Do not depend on placing the transaxle in P (Park) to keep the car from moving.
- Exercise extreme caution when driving on a slippery surface. Be especially careful when braking, accelerating or shifting gears. On a slippery surface, an abrupt change in vehicle speed can cause the drive wheels to lose traction and the vehicle to go out of control.
- Optimum vehicle performance and economy is obtained by smoothly depressing and releasing the accelerator pedal.
Driving your vehicle

**WARNING**

- Always buckle-up! In a collision, an unbelted occupant is significantly more likely to be seriously injured or killed than a properly belted occupant.
- Avoid high speeds when cornering or turning.
- Do not make quick steering wheel movements, such as sharp lane changes or fast, sharp turns.
- The risk of rollover is greatly increased if you lose control of your vehicle at highway speeds.
- Loss of control often occurs if two or more wheels drop off the roadway and the driver oversteers to reenter the roadway.
- In the event your vehicle leaves the roadway, do not steer sharply. Instead, slow down before pulling back into the travel lanes.
- Never exceed posted speed limits.

**WARNING**

If your vehicle becomes stuck in snow, mud, sand, etc., then you may attempt to rock the vehicle free by moving it forward and backward. Do not attempt this procedure if people or objects are anywhere near the vehicle. During the rocking operation the vehicle may suddenly move forward or backward as it becomes unstuck, causing injury or damage to nearby people or objects.

**Moving up a steep grade from a standing start**

To move up a steep grade from a standing start, depress the brake pedal, shift the shift lever to D (Drive). Select the appropriate gear depending on load weight and steepness of the grade, and release the parking brake. Depress the accelerator gradually while releasing the service brakes.
BRAKE SYSTEM

Power brakes
Your vehicle has power-assisted brakes that adjust automatically through normal usage.
In the event that the power-assisted brakes lose power because of a stalled engine or some other reason, you can still stop your vehicle by applying greater force to the brake pedal than you normally would. The stopping distance, however, will be longer.
When the engine is not running, the reserve brake power is partially depleted each time the brake pedal is applied. Do not pump the brake pedal when the power assist has been interrupted. Pump the brake pedal only when necessary to maintain steering control on slippery surfaces.

WARNING

Brakes

(Continued)

• Do not drive with your foot resting on the brake pedal. This will create abnormal high brake temperatures, excessive brake lining and pad wear, and increased stopping distances.
• When descending a long or steep hill, shift to a lower gear and avoid continuous application of the brakes. Continuous brake application will cause the brakes to overheat and could result in temporary loss of braking performance.
• Wet brakes may impair the vehicle’s ability to safely slow down; the vehicle may also pull to one side when the brakes are applied. Applying the brakes lightly will indicate whether they have been affected in this way. Always test your brakes in this fashion after driving through deep water. To dry the brakes, apply them lightly while maintaining a safe forward speed until brake performance returns to normal.

(Continued)

(Continued)

• Always, confirm the position of the brake and accelerator pedal before driving. If you don’t check the position of the accelerator and brake pedal before driving, you may depress the accelerator instead of the brake pedal. It may cause a serious accident.

In the event of brake failure
If service brakes fail to operate while the vehicle is in motion, you can make an emergency stop with the parking brake. The stopping distance, however, will be much greater than normal.

WARNING

Parking brake
Applying the parking brake while the vehicle is moving at normal speeds can cause a sudden loss of control of the vehicle. If you must use the parking brake to stop the vehicle, use great caution in applying the brake.
Disc brakes wear indicator
When your brake pads are worn and new pads are required, you will hear a high-pitched warning sound from your front brakes or rear brakes (if equipped). You may hear this sound come and go or it may occur whenever you depress the brake pedal. Please remember that some driving conditions or climates may cause a brake squeal when you first apply (or lightly apply) the brakes. This is normal and does not indicate a problem with your brakes.

⚠️ CAUTION

• To avoid costly brake repairs, do not continue to drive with worn brake pads.

(Continued)

Parking brake
Applying the parking brake

⚠️ WARNING

- Brake wear
This brake wear warning sound means your vehicle needs service. If you ignore this audible warning, you will eventually lose braking performance, which could lead to a serious accident.

Hand type
To engage the parking brake, first apply the foot brake and then pull up the parking brake lever as far as possible. In addition it is recommended that when parking the vehicle on an incline, the shift lever should be in a low gear on manual transaxle vehicles or in the P (Park) position on automatic transaxle / dual clutch transmission vehicles.
Driving with the parking brake applied will cause excessive brake pad and brake rotor wear.

Releasing the parking brake

Hand type
To release the parking brake, first apply the foot brake and pull up the parking brake lever slightly. Secondly depress the release button (1) and lower the parking brake lever (2) while holding the button.

If the parking brake does not release or does not release all the way, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ CAUTION

(Continued)

• All vehicles should always have the parking brake fully engaged when parking to avoid inadvertent movement of the vehicle which can injure occupants or pedestrians.

⚠️ WARNING

• To prevent unintentional movement when stopped and leaving the vehicle, do not use the shift lever instead of the parking brake. Set the parking brake AND make sure the shift lever is securely positioned in 1st (First) gear or R (Reverse) for manual transaxle equipped vehicles and in P (Park) for automatic transaxle / dual clutch transmission equipped vehicles.

• Never allow anyone who is unfamiliar with the vehicle to touch the parking brake. If the parking brake is released unintentionally, serious injury may occur.

Check the brake warning light by turning the ignition switch ON (do not start the engine). This light will be illuminated when the parking brake is applied with the ignition switch in the START or ON position. Before driving, be sure the parking brake is fully released and the brake warning light is off.
If the brake warning light remains on after the parking brake is released while the engine is running, there may be a malfunction in the brake system. Immediate attention is necessary. If at all possible, cease driving the vehicle immediately. If that is not possible, use extreme caution while operating the vehicle and only continue to drive the vehicle until you can reach a safe location or repair shop.

**Anti-lock brake system (ABS)**

**WARNING**

ABS (or ESC) will not prevent accidents due to improper or dangerous driving maneuvers. Even though vehicle control is improved during emergency braking, always maintain a safe distance between you and objects ahead. Vehicle speeds should always be reduced during extreme road conditions. The braking distance for vehicle equipped with an anti-lock braking system (or Electronic Stability control) may be longer than for those without it in the following road conditions.

During these conditions the vehicle should be driven at reduced speeds:
- Rough, gravel or snow-covered roads.
- With tire chains installed.
- On roads where the road surface is pitted or has different surface height.

The safety features of an ABS (or ESC) equipped vehicle should not be tested by high speed driving or cornering. This could endanger the safety of yourself or others.

The ABS continuously senses the speed of the wheels. If the wheels are going to lock, the ABS system repeatedly modulates the hydraulic brake pressure to the wheels. When you apply your brakes under conditions which may lock the wheels, you may hear a “tik-tik” sound from the brakes, or feel a corresponding sensation in the brake pedal. This is normal and it means your ABS is active.

In order to obtain the maximum benefit from your ABS in an emergency situation, do not attempt to modulate your brake pressure and do not try to pump your brakes. Press your brake pedal as hard as possible or as hard as the situation allows the ABS to control the force being delivered to the brakes.

! **NOTICE**

A click sound may be heard in the engine compartment when the vehicle begins to move after the engine is started. These conditions are normal and indicate that the anti-lock brake system is functioning properly.

- Even with the anti-lock brake system, your vehicle still requires sufficient stopping distance. Always maintain a safe distance from the vehicle in front of you.
- Always slow down when cornering. The anti-lock brake system cannot prevent accidents resulting from excessive speeds.
On loose or uneven road surfaces, operation of the anti-lock brake system may result in a longer stopping distance than for vehicles equipped with a conventional brake system.

(Continued)

• The ABS warning light will stay on for approximately 3 seconds after the ignition switch is ON. During that time, the ABS will go through self-diagnosis and the light will go off if everything is normal. If the light stays on, you may have a problem with your ABS. In this case, have your vehicle inspected by a professional workshop. Kia recommends to contact an authorized Kia dealer/service partner.

(Continued)

• Restart the engine. If the ABS warning light goes off, then your ABS system is normal. Otherwise, you may have a problem with the ABS. In this case, have your vehicle inspected by a professional workshop. Kia recommends to contact an authorized Kia dealer/service partner.

⚠️ CAUTION

• If the ABS warning light is on and stays on, you may have a problem with the ABS. In this case, however, your regular brakes will work normally.

(Continued)

• When you drive on a road having poor traction, such as an icy road, and have operated your brakes continuously, the ABS will be active continuously and the ABS warning light may illuminate. Pull your vehicle over to a safe place and stop the engine.

(Continued)

• Do not pump your brakes!
• Have the battery recharged before driving the vehicle.

⚠️ NOTICE

When you jump start your vehicle because of a drained battery, the engine may not run as smoothly and the ABS warning light may turn on at the same time. This happens because of low battery voltage. It does not mean your ABS has malfunctioned.

Driving your vehicle
Electronic stability control (ESC) (if equipped)

The Electronic Stability Control (ESC) system is designed to stabilize the vehicle during cornering maneuvers. ESC checks where you are steering and where the vehicle is actually going. ESC applies the brakes on individual wheels and intervenes with the engine management system to stabilize the vehicle.

![Image]

**WARNING**

Never drive too fast according to the road conditions or too quickly when cornering. Electronic Stability Control (ESC) will not prevent accidents. Excessive speed in turns, abrupt maneuvers and hydroplaning on wet surfaces can still result in serious accidents. Only a safe and attentive driver can prevent accidents by avoiding maneuvers that cause the vehicle to lose traction. Even with ESC installed, always follow all the normal precautions for driving — including driving at safe speeds for the conditions.

The Electronic Stability Control (ESC) system is an electronic system designed to help the driver maintain vehicle control under adverse conditions. It is not a substitute for safe driving practices. Factors including speed, road conditions and driver steering input can all affect whether ESC will be effective in preventing a loss of control. It is still your responsibility to drive and corner at reasonable speeds and to leave a sufficient margin of safety.

When you apply your brakes under conditions which may lock the wheels, you may hear a “tik-tik” sound from the brakes, or feel a corresponding sensation in the brake pedal. This is normal and it means your ESC is active.

**NOTICE**

A click sound may be heard in the engine compartment when the vehicle begins to move after the engine is started. These conditions are normal and indicate that the Electronic Stability Control System is functioning properly.

**ESC operation**

**ESC ON condition**

- When the ignition is turned ON, ESC and ESC OFF indicator lights illuminate for approximately 3 seconds, then ESC is turned on.
• Press the ESC OFF button for at least half a second after turning the ignition ON to turn ESC off. (ESC OFF indicator will illuminate). To turn the ESC on, press the ESC OFF button (ESC OFF indicator light will go off).

• When starting the engine, you may hear a slight ticking sound. This is the ESC performing an automatic system self-check and does not indicate a problem.

When operating
When the ESC is in operation, the ESC indicator light blinks. When the Electronic Stability Control is operating properly, you can feel a slight pulsation in the vehicle. This is only the effect of brake control and indicates nothing unusual.

When moving out of the mud or slippery road, pressing the accelerator pedal may not cause the engine rpm (revolutions per minute) to increase.

**ESC operation off**

**ESC OFF state**

This car has 2 kinds of ESC off states.
If the engine stops when ESC is off, ESC remains off. Upon restarting the engine, the ESC will automatically turn on again.

• **ESC off state 1**
To cancel the ESC operation, press the ESC OFF button (ESC OFF light) once. Then, the ESC OFF indicator light (ESC OFF light) will illuminate and the warning message “Traction & Stability Control disabled” will appear in the LCD window. At this state, the engine control function and brake control function do not operate. It means the car stability control function does not operate any more.

• **ESC off state 2**
To cancel the ESC operation, press the ESC OFF button (ESC OFF light) once. Then, the ESC OFF indicator light (ESC OFF light) will illuminate and the warning message “Traction Control disabled” will appear in the LCD window. At this state, the engine control function does not operate. It means the traction control function does not operate. Brake control function only operates.
Driving your vehicle

Indicator light

- ESC indicator light
- ESC OFF indicator light

When ignition switch is turned to the ON position, the indicator light illuminates, then goes off if the ESC system is operating normally. The ESC indicator light blinks whenever ESC is operating or illuminates when ESC fails to operate. ESC OFF indicator light comes on when the ESC is turned off with the button.

⚠️ CAUTION
Driving with varying tire or wheel sizes may cause the ESC system to malfunction. When replacing tires, make sure they are the same size as your original tires.

(Continued)

⚠️ WARNING
The Electronic Stability Control is only a driving aid; use precautions for safe driving by slowing down on curved, snowy, or icy roads. Drive slowly and don’t attempt to accelerate whenever the ESC indicator light is blinking, or when the road surface is slippery.

⚠️ WARNING
Never press the ESC OFF button while ESC is operating (ESC indicator light blinks). If ESC is turned off while ESC is operating, the vehicle may slip out of control.

★ NOTICE
- When operating the vehicle on a dynamometer, ensure that the ESC is turned off (ESC OFF light illuminated). If the ESC is left on, it may prevent the vehicle speed from increasing, and result in false diagnosis.
- Turning the ESC off does not affect ABS or brake system operation.

ESC OFF usage

When driving
- ESC should be turned on for daily driving whenever possible.
- To turn ESC off while driving, press the ESC OFF button while driving on a flat road surface.
Vehicle stability management (VSM)
This system provides further enhancements to vehicle stability and steering responses when a vehicle is driving on a slippery road or a vehicle detected changes in coefficient of friction between right wheels and left wheels when braking.

VSM operation
When the VSM is operating:
• ESC (Electronic Stability Control) light will blink.
• The steering wheel may be controlled.

When the vehicle stability management is operating properly, you can feel a slight pulsation in the vehicle. This is only the effect of brake control and indicates nothing unusual.

The VSM does not operate when:
• Driving on bank road such as gradient or incline
• Driving rearward
• ESC OFF indicator light remains on the instrument cluster
• EPS (Electronic Power Steering) indicator light remains on the instrument cluster

VSM operation off
If you press the ESC OFF button to turn off the ESC, the VSM will also cancel and the ESC OFF indicator light illuminates.
To turn on the VSM, press the button again. The ESC OFF indicator light goes out.

Malfunction indicator
The VSM can be deactivated even if you don’t cancel the VSM operation by pressing the ESC OFF button. It indicates that a malfunction has been detected somewhere in the EPS (Electronic Power Steering) system or VSM system. If the ESC indicator light or EPS warning light remains on, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

 NOTICE
• The VSM is designed to function above approximately 15 km/h (9 mph) on curves.
• The VSM is designed to function above approximately 30 km/h (18 mph) when a vehicle is braking on a split-mu road. The split-mu road is made of surfaces which have different friction forces.

 WARNING
• The Vehicle Stability Management system is not a substitute for safe driving practices but a supplementary function only. It is the responsibility of the driver to always check the speed and the distance to the vehicle ahead. Always hold the steering wheel firmly while driving.
(Continued)
(Continued)

- Your vehicle is designed to activate according to the driver’s intention, even with the VSM installed. Always follow all the normal precautions for driving at safe speeds for the conditions— including driving in inclement weather and on a slippery road.
- Driving with varying tire or wheel sizes may cause the VSM system to malfunction. When replacing tires, make sure they are the same size as your original tires.

ESS : Emergency Stop Signal (if equipped)
The Emergency Stop Signal system alerts the driver behind by blinking the stop light when the vehicle suddenly stops or when the ABS activates in emergency braking. (The system activates when the vehicle speed is over 55 km/h and the vehicle deceleration is over 7 m/s² or the ABS activates when the vehicle emergency braking.)

When the vehicle speed is under 40 km/h and the ABS deactivates or the emergency braking situation is over, the stop light blinking will stop. Instead the hazard warning flasher will turn on automatically.

The hazard warning flasher will turn off when the vehicle speed is over 10 km/h after the vehicle has stopped. Also, it will turn off when the vehicle drives at low speed for some time. You can turn it off manually by pushing the hazard warning flasher switch.

**CAUTION**
The Emergency Stop Signal system will not work if the hazard warning flasher is already on.

**WARNING**
The HAC is activated only for about 2 seconds, so when the vehicle is starting off always depress the accelerator pedal.

**NOTICE**
- The HAC does not operate when the transaxle shift lever is in the P (Park) or N (Neutral) position.
- The HAC activates even though the ESC is off but it does not activate when the ESC has malfunctioned.

Hill-start assist control (HAC) (if equipped)
A vehicle has the tendency to slip back on a steep hill when it starts to go after stopping. The Hill-start Assist Control (HAC) prevents the vehicle from slipping back by operating the brakes automatically for about 2 seconds. The brakes are released when the accelerator pedal is depressed or after about 2 seconds.
Good braking practices

**WARNING**

- Whenever you leave or park your vehicle, always set the parking brake as far as possible and fully engage the vehicle's transaxle into the P (Park) position (automatic transaxle / dual clutch transmission) or in first or reverse (manual transaxle). If the parking brake is not fully engaged, the vehicle may move inadvertently and injure yourself and others.

- All vehicles should always have the parking brake fully engaged when parking to avoid inadvertent movement of the vehicle which can injure occupants or pedestrians.

- Check to be sure the parking brake is not engaged and that the parking brake indicator light is out before driving away.

- Driving through water may get the brakes wet. They can also get wet when the vehicle is washed. Wet brakes can be dangerous! Your vehicle will not stop as quickly if the brakes are wet. Wet brakes may cause the vehicle to pull to one side. To dry the brakes, apply the brakes lightly until the braking action returns to normal, taking care to keep the vehicle under control at all times. If the braking action does not return to normal, stop as soon as it is safe to do so and have your vehicle inspected by a professional workshop. Kia recommends to call an authorized Kia dealer/service partner.

- Don't coast down hills with the vehicle out of gear. This is extremely hazardous. Keep the vehicle in gear at all times, use the brakes to slow down, then shift to a lower gear so that engine braking will help you maintain a safe speed.

- Don't "ride" the brake pedal. Resting your foot on the brake pedal while driving can be dangerous because the brakes might overheat and lose their effectiveness. It also increases the wear of the brake components.

- If a tire goes flat while you are driving, apply the brakes gently and keep the vehicle pointed straight ahead while you slow down. When you are moving slowly enough for it to be safe to do so, pull off the road and stop in a safe place.

- If your vehicle is equipped with an automatic transaxle / dual clutch transmission, don't let your vehicle creep forward. To avoid creeping forward, keep your foot firmly on the brake pedal when the vehicle is stopped.

- Be cautious when parking on a hill. Firmly engage the parking brake and place the shift lever in P (automatic transaxle / dual clutch transmission) or in first or reverse gear (manual transaxle). If your vehicle is facing downhill, turn the front wheels into the curb to help keep the vehicle from rolling.

If your vehicle is facing uphill, turn the front wheels away from the curb to help keep the vehicle from rolling.

If there is no curb or if it is required by other conditions to keep the vehicle from rolling, block the wheels.

- If your vehicle is facing uphill, turn the front wheels away from the curb to help keep the vehicle from rolling.
• Under some conditions your parking brake can freeze in the engaged position. This is most likely to happen when there is an accumulation of snow or ice around or near the rear brakes or if the brakes are wet. If there is a risk that the parking brake may freeze, apply it only temporarily while you put the shift lever in P (automatic transaxle / dual clutch transmission) or in first or reverse gear (manual transaxle) and block the rear wheels so the vehicle cannot roll. Then release the parking brake.

• Do not hold the vehicle on the upgrade with the accelerator pedal. This can cause the transaxle to overheat. Always use the brake pedal or parking brake.
CRUISE CONTROL SYSTEM (IF EQUIPPED)

1. Cruise indicator
2. Cruise set indicator

The cruise control system allows you to program the vehicle to maintain a constant speed without depressing the accelerator pedal. This system is designed to function above approximately 30 km/h.

 WARNING

- If the cruise control is left on, (CRUISE indicator light in the instrument cluster is illuminated), the cruise control can be switched on accidentally. Keep the cruise control system off (CRUISE indicator light OFF) when the cruise control is not in use, to avoid inadvertently setting a speed.
- Use the cruise control system only when driving on open highways in good weather.
- Do not use the cruise control when it may not be safe to keep the vehicle at a constant speed, for instance, driving in heavy or varying traffic, or on slippery (rainy, icy or snow-covered) or winding roads or over 6% up-hill or down-hill roads.
- Pay particular attention to the driving conditions whenever using the cruise control system.
- Be careful when driving downhill using the cruise control system, which may increase the vehicle speed.

 CAUTION

During cruise-speed driving with a manual transaxle vehicle, do not shift into neutral without depressing the clutch pedal, since the engine will be over-revved. If this happens, depress the clutch pedal or release the CRUISE switch.

 NOTICE

- During normal cruise control operation, when the SET switch is activated or reactivated after applying the brakes, the cruise control will energize after approximately 3 seconds. This delay is normal.
- To activate cruise control, depress the brake pedal at least once after turning the ignition switch to the ON position or starting the engine. This is to check if the brake switch which is important part to cancel cruise control is in normal condition.
Cruise control switch

CRUISE : Turns cruise control system on or off.
CANCEL: Cancels cruise control operation.
RES+: Resumes or increases cruise control speed.
SET-: Sets or decreases cruise control speed.

To set cruise control speed:

1. Press the CRUISE button on the steering wheel, to turn the system on. The CRUISE indicator light in the instrument cluster will illuminate.
2. Accelerate to the desired speed, which must be more than 30 km/h.
3. Move the lever down (to SET–), and release it at the desired speed. The SET indicator light in the instrument cluster will illuminate. Release the accelerator pedal at the same time. The desired speed will automatically be maintained.

* NOTICE

- Manual transaxle
For manual transaxle vehicles, you should depress the brake pedal at least once to set the cruise control after starting the engine.

On a steep grade, the vehicle may slow down or speed up slightly while going uphill or downhill.
To increase cruise control set speed:

Follow either of these procedures:
• Move the lever up (to RES+) and hold it. Your vehicle will accelerate. Release the lever at the speed you want.
• Move the lever up (to RES+) and release it immediately. The cruising speed will increase by 2.0 km/h or 1 mph each time you move the lever up (to RES+) in this manner.

To decrease the cruising speed:

Follow either of these procedures:
• Move the lever down (to SET-) and hold it. Your vehicle will gradually slow down. Release the lever at the speed you want to maintain.
• Move the lever down (to SET-) and release it immediately. The cruising speed will decrease by 2.0 km/h or 1 mph each time you move the lever down (to SET-) in this manner.

To temporarily accelerate with the cruise control on:
If you want to speed up temporarily when the cruise control is on, depress the accelerator pedal. Increased speed will not interfere with cruise control operation or change the set speed. To return to the set speed, take your foot off the accelerator pedal. If you move the down (to SET-) at increased speed, the cruising speed will be set again.

To cancel cruise control, do one of the following:

• Depress the brake pedal.
• Depress the clutch pedal with a manual transaxle.
• Shift into N (Neutral) with an automatic transaxle / dual clutch transmission.
• Press the CANCEL switch located on the steering wheel.
• Decrease the vehicle speed lower than the memory speed by 20 km/h.
• Decrease the vehicle speed to less than approximately 30 km/h.

Each of these actions will cancel cruise control operation (the SET indicator light in the instrument cluster will go off), but it will not turn the system off. If you wish to resume cruise control operation, move up the lever (to RES+) located on your steering wheel. You will return to your previously preset speed.

To resume cruising speed at more than approximately 30 km/h (20 mph):

If any method other than the CRUISE button was used to cancel cruising speed and the system is still activated, the most recent set speed will automatically resume when you move the lever up (to RES+). It will not resume, however, if the vehicle speed has dropped below approximately 30 km/h.

• Press the CRUISE button. (the CRUISE indicator light in the instrument cluster will go off)
• Turn the ignition off.

* NOTICE

Always check the road conditions when you move the lever up (to RES+) to resume the speed.

To turn cruise control off, do one of the following:
Both of these actions cancel cruise control operation. If you want to resume cruise control operation, repeat the steps provided in “To set cruise control speed” on page 6-48.
DRIVE MODE INTEGRATED CONTROL SYSTEM (IF EQUIPPED)

DRIVE mode

The mode changes whenever the DRIVE MODE button is pressed.

- NORMAL
- SPORT
- ECO

* When normal mode is selected, it is not displayed on the cluster.

ECO mode (Active ECO)

Active ECO helps improve fuel efficiency by controlling certain engine and transaxle system operating parameters. Fuel efficiency depends on the driver's driving habit and road condition.

- When the DRIVE MODE button is pressed and the ECO mode is selected, the ECO indicator (green) will illuminate to show that the Active ECO is operating.
- When the Active ECO is activated, it does not turn off even though the engine is restarted again. To turn off the system, press the DRIVE MODE button again.

When Active ECO is activated:

- The acceleration may slightly be reduced even though you depress the accelerator fully.
- The air conditioner performance may be limited
- The shift pattern of the automatic transaxle / dual clutch transmission may change.
- The engine noise may get louder.
- The steering wheel and suspension may be optimized to smooth handling and comfortable ride by ECS.

The above situations are normal conditions when the active eco system is activated to improve fuel efficiency.

Limitation of Active ECO operation:

If the following conditions occur while Active ECO is operating, the system operation is limited even though there is no change in the ECO indicator.

- When the coolant temperature is low: The system will be limited until engine performance becomes normal.
- When driving up a hill: The system will be limited to gain power when driving uphill because the engine torque is restricted.
- When using manual mode: The system will be limited according to the shift location.
- When the accelerator pedal is deeply depressed for a few seconds: The system will be limited, judging that the driver wants to speed up.
SPORT mode

SPORT mode focuses on dynamic driving by automatically controlling the steering wheel, engine and transaxle system.

• When the DRIVE MODE button is pressed and the SPORT mode is selected, the SPROT indicator (yellow) will illuminate.

• When the SPORT mode is activated, and the engine start/stop button is turned off and on it will change to NORMAL mode. To turn on the SPORT mode press DRIVE MODE button again.

• If the system is activated:
  - After speeding, it maintains the gear and RPM for some time even though the accelerator pedal is not depressed.
  - Up-shifting is delayed.

• The steering wheel and suspension may be optimized to sporty handling and hard ride by ECS.

* NOTICE

In Sport drive mode, the fuel efficiency may decrease.
The BSD (Blind spot detection) system uses a radar sensor to alert the driver while driving. It senses the rear side territory of the vehicle and provides information to the driver.

1. BSD (Blind spot detection)
   Warning range is dependent on your vehicle speed. However, if the speed of your vehicle is faster by 10 km/h or more than other nearby vehicles, the warning is not operated.

2. LCA (Lane change assist)
   When vehicles are approaching to your vehicle at high speed, the warning is operated.

3. RCTA (Rear cross traffic alert)
   When your vehicle moves backward, the sensor detects approaching vehicles to the left or right side direction and warning is operated.

**WARNING**

- Always check the road condition while driving for unexpected situations even though the BSD (Blind spot detection) system is operating.
- BSD (Blind spot detection) system is a system made for convenience. Do not solely rely on the system but always pay attention to drive safely.

The indicator on the switch will illuminate when the BSD (Blind spot detection) / LCA (Lane Change Assist) system switch is pressed with the ignition switch ON. If the vehicle speed exceeds 30 km/h (18.6 mph), the system will activate. If you press the switch again, the switch indicator and system will be turned off. If the ignition switch is turned OFF and ON the system returns to the previous state.
When the system is not used turn the system off by pressing the switch. When the system is turned on the warning light will illuminate for 3 seconds on the outside rearview mirror.

**Warning type**

The system will activate when:
1. The system is on
2. Vehicle speed is above 30 km/h
3. Other vehicles are detected in the rear side

If a vehicle is detected within the boundary of the system, a warning light will illuminate on the outside rearview mirror.

If the detected vehicle is not in detection range, the warning will be turned off.

- The second stage alarm can be deactivated.

  - To activate the alarm: Go to the User Settings Mode → Sound and select “BSD” on the LCD window.
  - To deactivate the alarm: Go to the User Settings Mode → Sound and deselect “BSD” on the LCD window.

**CAUTION**

The alarm function helps alert the driver. Deactivate this function only when it is necessary.

The second stage alarm will activate when:
1. The first stage alert is on
2. The turn signal is on to change a lane

When the second stage alert is activated, a warning light will be blinking on the outside rearview mirror and an alarm will sound. If you move the turn signal switch to origin position, the second stage alert will be deactivated.
Detecting sensor

Always keep the rear bumper clean for the system to work properly.

**Warning message**

- Blind Spot Detection disabled. Radar blocked

This warning message will appear to notify the driver if there are foreign substances on the rear bumper or it is hot near the rear bumper. The light on the switch and the system will be turned off automatically.

Remove the foreign substance on the rear bumper.

After the foreign substance is removed, if you drive for approximately 10 minutes, the system will work normally.

If the system does not work normally even though camera's field of view is cleared, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

It is possible to get the message with no foreign substance on the rear bumper, for example, when driving in sparse rural or open area, such as desert, where there is insufficient data for operation.

This message may also activate during heavy rain or due to road spray.

In this case, the vehicle does not need service.

This message may also display when large object such as bicycle carrier or trailer is attached to the rear part of the vehicle. When such large objects are attached, turn off the BSD function.

If the system does not operate normally after removing the substance or is not in a situation mentioned above, take your vehicle to a professional workshop and have the system checked. Kia recommends to visit an authorized Kia dealer/service partner.

- Check BSD System

If the system does not work properly, this warning message will appear and the light on the switch will turn off. The system will turn off automatically.

In this case, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
RCTA (Rear cross traffic alert)

When your vehicle moves backwards from a parking position, the sensor detects approaching vehicles to the left or right side direction and gives information to the driver.

**Operating conditions**
- To activate the RCTA (Rear Cross Traffic Alert),
  1. Change the LCD modes to User setting mode
  2. Select the Driving Assist
  3. Check the Smart Trunk.
For more details, refer to “LCD Windows” on page 4-64.

- Select RCTA again, to turn the system off.
- If the vehicle is turned off and on again, the RCTA system will return to the state right before the vehicle was turned off. Turn the RCTA system off when not in use.
- The system is operated when the vehicle speed is below 10km/h with the shift lever in R (Reverse).
- The RCTA (Rear Cross Traffic Alert) detecting range is 0.5m~20m based on side direction. If an approaching vehicle speed is 7 km/h~36 km/h in detection range, The warning is on. However, the system sensing range is different based on conditions. Always pay attention to surrounding.

**Warning type**
- If an approaching vehicle detected by sensors, the warning is chime and the warning light will blink on the outside rearview mirror.
- If the detected vehicle is out of detection range, moving away in the opposite direction or moving slow, the warning is cancelled.
- The system may not be operating properly due to other factors or circumstances, so always pay attention to your surrounding.

* If the bumper on either side is blocked by a barrier or vehicles, the
system sensing ability may be deteriorated.

**WARNING**

- The warning light on the outside rearview mirror will illuminate whenever a vehicle is detected at the rear side by the system.
- To avoid accidents, do not focus only on the warning light and neglect to see the surrounding of the vehicle.
- Drive safely even though the vehicle is equipped with a BSD (Blind spot detection) system. Do not solely rely on the system but check for yourself before changing lanes.
- The system may not alert the driver in some conditions so always check the surroundings while driving.

### CAUTION

- The system may not work properly if the bumper has been replaced or if a repair work has been done near the sensor.
- The detection area differs according to the roads width. If the road is narrow the system may detect other vehicles in the second next lane.
- On the contrary, if the road is very wide the system may not detect other vehicles in the next lane.
- The system might be turned off due to strong electromagnetic waves.

**Non-operating condition**

Outside rearview mirror may not alert the driver when:
- The outside rearview mirror housing is damaged or covered with debris.
- The window is covered with debris.
- The windows are severely tinted.

**Driver's Attention**

The driver must be cautious in the below situations, because the system may not detect other vehicles or objects in certain circumstances.
- The vehicle drives on a curved road or through a tollgate.
- The sensor is polluted with rain, snow, mud, etc.
- The rear bumper, in which the sensor is located, is covered or blocked with a foreign matter such as a sticker, a bumper guard, a bicycle stand, etc.
- The rear bumper is damaged, or the sensor is out of the original default position.
- The vehicle height gets lower or higher due to heavy loading in a trunk, abnormal tire pressure, etc.
- The vehicle drives in a bad weather such as heavy rain or snow.
- There is a fixed object near the vehicle, such as a guardrail.
- A big vehicle is near such as a bus or truck.
- A motorcycle or bicycle is near.
- A flat trailer is near.
- If the vehicle has started at the same time as the vehicle next to you and has accelerated.
- When the other vehicle passes at a very fast speed.
- While changing lanes.
- When going down or up a steep, uneven road.
- When the other vehicle approaches very close.
- When a trailer or carrier is installed.
- When the temperature of the rear bumper is very high or low.
- When the sensors are blocked by other vehicles, walls or parking-lot pillars.
- When the detected vehicle also moves back, as your vehicle drives back.
- If there are small things like shopping cart and baby carriage.
- If there is low height vehicle like sport vehicle.
- When other vehicles are close to your vehicle.
- When the vehicle in the next lane moves two lanes away from you OR when the vehicle two lanes away moves to the next lane from you.
- When driving through a narrow road with many plants.
- When driving on wet surface.
ECONOMICAL OPERATION

Your vehicle’s fuel economy depends mainly on your style of driving, where you drive and when you drive. Each of these factors affects how many kilometers (miles) you can get from a liter (gallon) of fuel. To operate your vehicle as economically as possible, use the following driving suggestions to help save money in both fuel and repairs:

• Drive smoothly. Accelerate at a moderate rate. Do not make “jackrabbit” starts or full-throttle shifts and maintain a steady cruising speed. Do not race between stoplights. Try to adjust your speed to the traffic so you do not have to change speeds unnecessarily. Avoid heavy traffic whenever possible. Always maintain a safe distance from other vehicles so you can avoid unnecessary braking. This also reduces brake wear.

• Drive at a moderate speed. The faster you drive, the more fuel your vehicle uses. Driving at a moderate speed, especially on the highway, is one of the most effective ways to reduce fuel consumption.

• Do not “ride” the brake or clutch pedal. This can increase fuel consumption and also increase wear on these components. In addition, driving with your foot resting on the brake pedal may cause the brakes to overheat, which reduces their effectiveness and may lead to more serious consequences.

• Take care of your tires. Keep them inflated to the recommended pressure. Incorrect inflation, either too much or too little, results in unnecessary tire wear. Check the tire pressures at least once a month.

• Be sure that the wheels are aligned correctly. Improper alignment can result from hitting curbs or driving too fast over irregular surfaces. Poor alignment causes faster tire wear and may also result in other problems as well as greater fuel consumption.

• Keep your vehicle in good condition. For better fuel economy and reduced maintenance costs, maintain your vehicle in accordance with the maintenance schedule in Chapter 9, Maintenance. If you drive your vehicle in severe conditions, more frequent maintenance is required (see Chapter 9, Maintenance for details).

• Keep your vehicle clean. For maximum service, your vehicle should be kept clean and free of corrosive materials. It is especially important that mud, dirt, ice, etc. not be allowed to accumulate on the underside of the vehicle. This extra weight can result in increased fuel consumption and also contribute to corrosion.

• Travel lightly. Do not carry unnecessary weight in your vehicle. Weight reduces fuel economy.

• Do not let the engine idle longer than necessary. If you are waiting (and not in traffic), turn off your engine and restart only when you’re ready to go.

• Remember, your vehicle does not require extended warm-up. After the engine has started, allow the engine to run for 10 to 20 seconds prior to placing the vehicle in gear. In very cold weather, however, give your engine a slightly longer warmup period.

• Do not “lug” or “over-rev” the engine. Lugging is driving too slowly in too high a gear resulting engine bucking. If this happens, shift to a lower gear. Over-revving is racing the engine beyond its safe limit. This can be avoided by shifting at the recommended speeds.
Use your air conditioning sparingly. The air conditioning system is operated by engine power so your fuel economy is reduced when you use it.

- Open windows at high speeds can reduce fuel economy.
- Fuel economy is less in crosswinds and headwinds. To help offset some of this loss, slow down when driving in these conditions.

Keeping a vehicle in good operating condition is important both for economy and safety. Therefore, have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**WARNING**

- **Engine off during motion**

  Never turn the engine off to coast down hills or anytime the vehicle is in motion. The power steering and power brakes will not function properly without the engine running. Instead, keep the engine on and downshift to an appropriate gear for engine braking effect. In addition, turning off the ignition while driving could engage the steering wheel lock (if equipped) resulting in loss of vehicle steering which could cause serious injury or death.
SPECIAL DRIVING CONDITIONS

Hazardous driving conditions

When hazardous driving conditions are encountered such as water, snow, ice, mud, sand, or similar hazards, follow these suggestions:
• Drive cautiously and allow extra distance for braking.
• Avoid sudden braking or steering.
• When braking with non-ABS brakes, pump the brake pedal with a light up-and-down motion until the vehicle is stopped.

⚠️ WARNING

ABS
Do not pump the brake pedal on a vehicle equipped with ABS.

• If stalled in snow, mud, or sand, use second gear. Accelerate slowly to avoid spinning the drive wheels.
• Use sand, rock salt, tire chains, or other non-slip material under the drive wheels to provide traction when stalled in ice, snow, or mud.

⚠️ WARNING

Downshifting
Downshifting with an automatic transaxle / dual clutch transmission, while driving on slippery surfaces can cause an accident. The sudden change in tire speed could cause the tires to skid. Be careful when downshifting on slippery surfaces.

⚠️ CAUTION

Prolonged rocking may cause engine over-heating, transaxle damage or failure, and tire damage.

⚠️ WARNING

Spinning tires
Do not spin the wheels, especially at speeds more than 56 km/h (35 mph). Spinning the wheels at high speeds when the vehicle is stationary could cause a tire to overheat which could result in tire damage that may injure bystanders.

⚠️ NOTICE

The ESC system should be turned OFF prior to rocking the vehicle.

Rocking the vehicle
If it is necessary to rock the vehicle to free it from snow, sand, or mud, first turn the steering wheel right and left to clear the area around your front wheels. Then, shift back and forth between 1 (First) and R (Reverse) in vehicles equipped with a manual transaxle or R (Reverse) and any forward gear in vehicles equipped with an automatic transaxle / dual clutch transmission. Do not race the engine, and spin the wheels as little as possible. If you are still stuck after a few tries, have the vehicle pulled out by a tow vehicle to avoid engine overheating and possible damage to the transaxle.
**WARNING**

If your vehicle becomes stuck in snow, mud, sand, etc., then you may attempt to rock the vehicle free by moving it forward and backward. Do not attempt this procedure if people or objects are anywhere near the vehicle. During the rocking operation the vehicle may suddenly move forward or backward as it becomes unstuck, causing injury or damage to nearby people or objects.

---

**Smooth cornering**

Avoid braking or gear changing in corners, especially when roads are wet. Ideally, corners should always be taken under gentle acceleration. If you follow these suggestions, tire wear will be held to a minimum.

---

**Driving at night**

Because night driving presents more hazards than driving in the daylight, here are some important tips to remember:

- Slow down and keep more distance between you and other vehicles, as it may be more difficult to see at night, especially in areas where there may not be any street lights.
- Adjust your mirrors to reduce the glare from other driver's headlights.
• Keep your headlights clean and properly aimed on vehicles not equipped with the automatic headlight aiming feature. Dirty or improperly aimed headlights will make it much more difficult to see at night.

• Avoid staring directly at the headlights of oncoming vehicles. You could be temporarily blinded, and it will take several seconds for your eyes to readjust to the darkness.

Driving in the rain

Rain and wet roads can make driving dangerous, especially if you’re not prepared for the slick pavement. Here are a few things to consider when driving in the rain:

• A heavy rainfall will make it harder to see and will increase the distance needed to stop your vehicle, so slow down.

• Keep your windshield wiper equipment in good shape. Replace your windshield wiper blades when they show signs of streaking or missing areas on the windshield.

• If your tires are not in good condition, making a quick stop on wet pavement can cause a skid and possibly lead to an accident. Be sure your tires are in good shape.

• Turn on your headlights to make it easier for others to see you.

• Driving too fast through large puddles can affect your brakes. If you must go through puddles, try to drive through them slowly.

• If you believe you may have gotten your brakes wet, apply them lightly while driving until normal braking operation returns.

Driving in flooded areas

Avoid driving through flooded areas unless you are sure the water is no higher than the bottom of the wheel hub. Drive through any water slowly. Allow adequate stopping distance because brake performance may be affected. After driving through water, dry the brakes by gently applying them several times while the vehicle is moving slowly.
Driving off-road
Drive carefully off-road because your vehicle may be damaged by rocks or roots of trees. Become familiar with the off-road conditions where you are going to drive before you begin driving.

Highway driving

Tires
Adjust the tire inflation pressures to specification. Low tire inflation pressures will result in overheating and possible failure of the tires. Avoid using worn or damaged tires which may result in reduced traction or tire failure.

* NOTICE
Never exceed the maximum tire inflation pressure shown on the tires.

WARNING
• Underinflated or overinflated tires can cause poor handling, loss of vehicle control, and sudden tire failure leading to accidents, injuries, and even death. Always check the tires for proper inflation before driving. For proper tire pressures, refer to “Tires and wheels” on page 9–08.
• Driving on tires with no or insufficient tread is dangerous. Worn-out tires can result in loss of vehicle control, collisions, injury, and even death. Worn-out tires should be replaced as soon as possible and should never be used for driving. Always check the tire tread before driving your vehicle. For further information and tread limits, refer to “Tires and wheels” on page 9–08.

Fuel, engine coolant and engine oil
High speed travel consumes more fuel than urban motoring. Do not forget to check both engine coolant and engine oil.

Drive belt
A loose or damaged drive belt may result in overheating of the engine.
Severe weather conditions in the winter result in greater wear and other problems. To minimize the problems of winter driving, you should follow these suggestions:

**Snowy or icy conditions**
To drive your vehicle in deep snow, it may be necessary to use snow tires or to install tire chains on your tires. If snow tires are needed, it is necessary to select tires equivalent in size and type of the original equipment tires. Failure to do so may adversely affect the safety and handling of your vehicle. Furthermore, speeding, rapid acceleration, sudden brake applications, and sharp turns are potentially very hazardous practices.
During deceleration, use engine braking to the fullest extent. Sudden brake applications on snowy or icy roads may cause skids to occur. You need to keep sufficient distance between the vehicle in operation in front and your vehicle. Also, apply the brake gently. It should be noted that installing tire chains on the tire will provide a greater driving force, but will not prevent side skids.

**Snow tires**
If you mount snow tires on your vehicle, make sure they are radial tires of the same size and load range as the original tires. Mount snow tires on all four wheels to balance your vehicle’s handling in all weather conditions. Keep in mind that the traction provided by snow tires on dry roads may not be as high as your vehicle’s original equipment tires. You should drive cautiously even when the roads are clear. Check with the tire dealer for maximum speed recommendations.

**WARNING**

- **Snow tire size**
Snow tires should be equivalent in size and type to the vehicle’s standard tires. Otherwise, the safety and handling of your vehicle may be adversely affected.

Do not install studded tires without first checking local, state and municipal regulations for possible restrictions against their use.

**NOTICE**
Tire chains are not legal in all countries. Check the country laws before fitting tire chains.
**Tire chains**

Since the sidewalls of radial tires are thinner, they can be damaged by mounting some types of snow chains on them. Therefore, the use of snow tires is recommended instead of snow chains. Do not mount tire chains on vehicles equipped with aluminum wheels; snow chains may cause damage to the wheels. If snow chains must be used, use wire-type chains with a thickness of less than 12 mm (0.47 in). Damage to your vehicle caused by improper snow chain use is not covered by your vehicle manufacturers warranty. Install tire chains only on the front tires.

**CAUTION**

- Make sure the snow chains are the correct size and type for your tires. Incorrect snow chains can cause damage to the vehicle body and suspension and may not be covered by your vehicle manufacturer warranty. Also, the snow chain connecting hooks may be damaged from contacting vehicle components causing the snow chains to come loose from the tire. Make sure the snow chains are SAE class “S” certified.
- Always check chain installation for proper mounting after driving approximately 0.5 to 1 km (0.3 to 0.6 miles) to ensure safe mounting. Retighten or remount the chains if they are loose.
- If your vehicle has 225/40R18 size tires do not use tire chain; they can damage your vehicle (wheel, suspension and body).

**Chain installation**

When installing chains, follow the manufacturer’s instructions and mount them as tightly as you can. Drive slowly with chains installed. If you hear the chains contacting the body or chassis, stop and tighten them. If they still make contact, slow down until it stops. Remove the chains as soon as you begin driving on cleared roads.

**WARNING**

- **Mounting chains**

  When mounting snow chains, park the vehicle on level ground away from traffic. Turn on the vehicle Hazard Warning flashers and place a triangular emergency warning device behind the vehicle if available. Always place the vehicle in P (Park), apply the parking brake and turn off the engine before installing snow chains.
Driving your vehicle

Use high quality ethylene glycol coolant
Your vehicle is delivered with high quality ethylene glycol coolant in the cooling system. It is the only type of coolant that should be used because it helps prevent corrosion in the cooling system, lubricates the water pump and prevents freezing. Be sure to replace or replenish your coolant in accordance with the maintenance schedule in “Cooling system” on page 8-21. Before winter, have your coolant tested to assure that its freezing point is sufficient for the temperatures anticipated during the winter.

Change to “winter weight” oil if necessary
In some climates it is recommended that a lower viscosity “winter weight” oil be used during cold weather. See section 8 for recommendations. If you aren’t sure what weight oil you should use, Kia recommends to consult an authorized Kia dealer/service partner.

Check spark plugs and ignition system
Inspect your spark plugs as described in 8-21 and replace them if necessary. Also check all ignition wiring and components to be sure they are not cracked, worn or damaged in any way.

To keep locks from freezing
To keep the locks from freezing, squirt an approved de-icer fluid or glycerine into the key opening. If a lock is covered with ice, squirt it with an approved de-icing fluid to remove the ice. If the lock is frozen internally, you may be able to thaw it out by using a heated key. Handle the heated key with care to avoid injury.

WARNING

Tire chains
• The use of chains may adversely affect vehicle handling.
• Do not exceed 30 km/h (20 mph) or the chain manufacturer’s recommended speed limit, whichever is lower.
• Drive carefully and avoid bumps, holes, sharp turns, and other road hazards, which may cause the vehicle to bounce.
• Avoid sharp turns or locked-wheel braking.

Check battery and cables
Winter puts additional burdens on the battery system. Visually inspect the battery and cables as described in 8-40. Have the level of charge in your battery checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

CAUTION

• Chains that are the wrong size or improperly installed can damage your vehicle’s brake lines, suspension, body and wheels.
• Stop driving and retighten the chains any time you hear them hitting the vehicle.
Use approved window washer anti-freeze in system
To keep the water in the window washer system from freezing, add an approved window washer anti-freeze solution in accordance with instructions on the container. Window washer anti-freeze is available from an authorized Kia dealer/service partner and most auto parts outlets. Do not use engine coolant or other types of anti-freeze as these may damage the paint finish.

Don't let your parking brake freeze
Under some conditions your parking brake can freeze in the engaged position. This is most likely to happen when there is an accumulation of snow or ice around or near the rear brakes or if the brakes are wet. If there is a risk the parking brake may freeze, apply it only temporarily while you put the shift lever in P (automatic transaxle / dual clutch transmission) or in first or reverse gear (manual transaxle) and block the rear wheels so the vehicle cannot roll. Then release the parking brake.

Don't let ice and snow accumulate underneath
Under some conditions, snow and ice can build up under the fenders and interfere with the steering. When driving in severe winter conditions where this may happen, you should periodically check underneath the vehicle to be sure the movement of the front wheels and the steering components is not obstructed.

Carry emergency equipment
Depending on the severity of the weather, you should carry appropriate emergency equipment. Some of the items you may want to carry include tire chains, tow straps or chains, flashlight, emergency flares, sand, shovel, jumper cables, window scraper, gloves, ground cloth, coveralls, blanket, etc.
TRAILER TOWING

If you are considering towing with your vehicle, you should first check with your country's Department of Motor Vehicles to determine their legal requirements. Since laws vary the requirements for towing trailers, cars, or other types of vehicles or apparatus may differ. Kia recommends to ask an authorized Kia dealer/service partner.

⚠️ WARNING

- Towing a trailer
  If you don't use the correct equipment and/or drive improperly, you can lose control when you pull a trailer. For example, if the trailer is too heavy, the brakes may not work well or even at all. You and your passengers could be seriously or fatally injured. Pull a trailer only if you have followed all the steps in this section.

⚠️ WARNING

- Weight limits
  Before towing, make sure the total trailer weight, GCW (gross combination weight), GVW (gross vehicle weight), GAW (gross axle weight) and trailer tongue load are all within the limits.

* NOTICE

- For Europe
  (Continued)

(Continued)

- The technically permissible maximum load on the rear axle(s) may be exceeded by not more than 15% and the technically permissible maximum laden mass of the vehicle may be exceeded by not more than 10% or 100 kg (220.4 lbs), whichever value is lower. In this case, do not exceed 100 km/h (62.1 mph) for vehicle of category M1 or 80 km/h (49.7 mph) for vehicle of category N1.

- When towing a trailer, the additional load imposed at the trailer coupling device may cause the rear tire maximum load ratings to be exceeded, but not by more than 15%. In such a case, do not exceed 100 kPa (0.2 bar) above the tire pressure(s) as recommended for normal use (i.e. without a trailer attached).
CAUTION

Pulling a trailer improperly can damage your vehicle and result in costly repairs not covered by your warranty. To pull a trailer correctly, follow the advice in this section.

Your vehicle can tow a trailer. To identify what the vehicle trailering capacity is for your vehicle, you should read the information in “Weight of the trailer” that appears later in this section. Remember that trailering is different than just driving your vehicle by itself. Trailering means changes in handling, durability, and fuel economy. Successful, safe trailering requires correct equipment, and it has to be used properly.

This section contains many time-tested, important trailering tips and safety rules. Many of these are important for your safety and that of your passengers. Please read this section carefully before you pull a trailer.

Load-pulling components such as the engine, transaxle, wheel assemblies, and tires are forced to work harder against the load of the added weight. The engine is required to operate at relatively higher speeds and under greater loads. This additional burden generates extra heat. The trailer also considerably adds wind resistance, increasing the pulling requirements.
Driving your vehicle

* NOTICE

Location of trailer mounting
The mounting hole for hitches are located on both sides of the underbody behind the rear tires.

Hitches
It’s important to have the correct hitch equipment. Crosswinds, large trucks going by, and rough roads are a few reasons why you’ll need the right hitch. Here are some rules to follow:

- Do you have to make any holes in the body of your vehicle when you install a trailer hitch? If you do, then be sure to seal the holes later when you remove the hitch.
- If you do not seal them, deadly carbon monoxide (CO) from your exhaust can get into your vehicle, as well as dirt and water.
- The bumpers on your vehicle are not intended for hitches. Do not attach rental hitches or other bumper-type hitches to them. Use only a frame-mounted hitch that does not attach to the bumper.

- Kia trailer hitch accessory is available at an authorized Kia dealer/service partner.

Safety chains
You should always attach chains between your vehicle and your trailer. Cross the safety chains under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch.

Instructions about safety chains may be provided by the hitch manufacturer or by the trailer manufacturer. Follow the manufacturer’s recommendation for attaching safety chains. Always leave just enough slack so you can turn with your trailer. And, never allow safety chains to drag on the ground.

Trailer brakes
If your trailer is equipped with a braking system, make sure it conforms to your country’s regulations and that it is properly installed and operating correctly.

If your trailer weight exceeds the maximum allowed weight without trailer brakes, then the trailer will also require its own brakes as well. Be sure to read and follow the instructions for the trailer brakes so you’ll be able to install, adjust and maintain them properly.

- Do not tap into or modify your vehicle’s brake system.

WARNING

Trailer brakes
Do not use a trailer with its own brakes unless you are absolutely certain that you have properly set up the brake system. This is not a task for amateurs. Use an experienced, competent trailer shop for this work.

Driving with a trailer
Towing a trailer requires a certain amount of experience. Before setting out for the open road, you must get to know your trailer. Acquaint yourself with the feel of handling and braking with the added weight of the trailer. And always keep in mind that the vehicle you are driving is now a good deal longer and not nearly so responsive as your vehicle is by itself.
Before you start, check the trailer hitch and platform, safety chains, electrical connector(s), lights, tires and mirror adjustment. If the trailer has electric brakes, start your vehicle and trailer moving and then apply the trailer brake controller by hand to be sure the brakes are working. This lets you check your electrical connection at the same time.

During your trip, check occasionally to be sure that the load is secure, and that the lights and any trailer brakes are still working.

**Following distance**
Stay at least twice as far behind the vehicle ahead as you would when driving your vehicle without a trailer. This can help you avoid situations that require heavy braking and sudden turns.

**Passing**
You’ll need more passing distance up ahead when you’re towing a trailer. And, because of the increased vehicle length, you’ll need to go much farther beyond the passed vehicle before you can return to your lane. Due to the added load to the engine when going uphill the vehicle may also take longer to pass than it would on flat ground.

**Backing up**
Hold the bottom of the steering wheel with one hand. Then, to move the trailer to the left, just move your hand to the left. To move the trailer to the right, move your hand to the right. Always back up slowly and, if possible, have someone guide you.

**Making turns**
When you’re turning with a trailer, make wider turns than normal. Do this so your trailer won’t strike soft shoulders, curbs, road signs, trees, or other objects near the edge of the road. Avoid jerky or sudden maneuvers. Signal well in advance before turning or lane changes.

**Turn signals when towing a trailer**
When you tow a trailer, your vehicle has to have a different turn signal flasher and extra wiring. The green arrows on your instrument panel will flash whenever you signal a turn or lane change. Properly connected, the trailer lights will also flash to alert other drivers you’re about to turn, change lanes, or stop.

When towing a trailer, the green arrows on your instrument panel will flash for turns even if the bulbs on the trailer are burned out. Thus, you may think drivers behind you are seeing your signals when, in fact, they are not. It is important to check occasionally to be sure the trailer bulbs are still working. You must also check the lights every time you disconnect and then reconnect the wires.

Do not connect a trailer lighting system directly to your vehicle’s lighting system. Use only an approved trailer wiring harness.

Have yourself assisted by a professional workshop in installing the wiring harness. Kia recommends to visit an authorized Kia dealer/service partner.

---

**WARNING**

Failure to use an approved trailer wiring harness could result in damage to the vehicle electrical system and/or personal injury.
Driving on grades
Reduce speed and shift to a lower gear before you start down a long or steep downgrade. If you don’t shift down, you might have to use your brakes so much that they would get hot and no longer operate efficiently.
On a long uphill grade, shift down and reduce your speed to around 70 km/h (45 mph) to reduce the possibility of engine and transaxle overheating.
If your trailer weighs more than the maximum trailer weight without trailer brakes and you have an automatic transaxle / dual clutch transmission, you should drive in D (Drive) when towing a trailer.
Operating your vehicle in D (Drive) when towing a trailer will minimize heat build up and extend the life of your transaxle.

CAUTION
• When towing a trailer on steep grades (in excess of 6%) pay close attention to the engine coolant temperature gauge to ensure the engine does not overheat. If the needle of the coolant temperature gauge moves across the dial towards “130/H (HOT)”, pull over and stop as soon as it is safe to do so, and allow the engine to idle until it cools down. You may proceed once the engine has cooled sufficiently.
• You must decide driving speed depending on trailer weight and uphill grade to reduce the possibility of engine and transaxle overheating.

Parking on hills
Generally, if you have a trailer attached to your vehicle, you should not park your vehicle on a hill. People can be seriously or fatally injured, and both your vehicle and the trailer can be damaged if they unexpectedly roll down hill.
However, if you ever have to park your trailer on a hill, here is how to do it:

WARNING
■ Parking on a hill
Parking your vehicle on a hill with a trailer attached could cause serious injury or death, should the trailer break loose or the brake stops working.

1. Pull the vehicle into the parking space. Turn the steering wheel in the direction of the curb (right if headed down hill, left if headed up hill).
2. If the vehicle has a manual transaxle, place the car in neutral. If the vehicle has an automatic transaxle / dual clutch transmission, place the car in P (Park).
3. Set the parking brake and shut off the vehicle.
4. Place chocks under the trailer wheels on the down hill side of the wheels.
5. Start the vehicle, hold the brakes, shift to neutral, release the parking brake and slowly release the brakes until the trailer chocks absorb the load.
6. Reapply the brakes, reapply the parking brake and shift the vehicle to R (Reverse) for manual transaxle or P (Park) for automatic transaxle / dual clutch transmission.
7. Shut off the vehicle and release the vehicle brakes but leave the parking brake set.

**WARNING**

**Parking brake**

It can be dangerous to get out of your vehicle if the parking brake is not firmly set. If you have left the engine running, the vehicle can move suddenly. You or others could be seriously or fatally injured.

When you are ready to leave after parking on a hill

1. With the manual transaxle in Neutral or automatic transaxle / dual clutch transmission in P (Park), apply your brakes and hold the brake pedal down while you:
   - Start your engine;
   - Shift into gear; and
   - Release the parking brake.
2. Slowly remove your foot from the brake pedal.
3. Drive slowly until the trailer is clear of the chocks.
4. Stop and have someone pick up and store the chocks.

**Maintenance when trailer towing**

Your vehicle will need service more often when you regularly pull a trailer. Important items to pay particular attention to include engine oil, automatic transaxle / dual clutch transmission fluid, axle lubricant and cooling system fluid. Brake condition is another important item to frequently check. Each item is covered in this manual, and the Index will help you find them quickly. If you’re trailering, it is a good idea to review these sections before you start your trip.

Do not forget to also maintain your trailer and hitch. Follow the maintenance schedule that accompanied your trailer and check it periodically. Preferably, conduct the check at the start of each day’s driving. Most importantly, all hitch nuts and bolts should be tight.

**CAUTION**

- Due to higher load during trailer usage, overheating might occur in hot days or during uphill driving. If the coolant gauge indicates overheating, switch off the air conditioner and stop the vehicle in a safe area to cool down the engine.
- When towing check transaxle fluid more frequently.

**If you do decide to pull a trailer**

Here are some important points if you decide to pull a trailer:

- Consider using a sway control. You can ask a hitch dealer about sway control.
- Do not do any towing with your car during its first 2,000 km (1,200 miles) in order to allow the engine to properly break in. Failure to heed this caution may result in serious engine or transaxle damage.
- When towing a trailer, Kia recommends that you consult an authorized Kia dealer/service partner on additional requirements such as a towing kit, etc.
Driving your vehicle

- Always drive your vehicle at a moderate speed (less than 100 km/h (60 mph)).
- On a long uphill grade, do not exceed 70 km/h (45 mph) or the posted towing speed limit, whichever is lower.
- The chart contains important considerations that have to do with weight:

DCT: Dual clutch transmission
∗ 2 Door vehicle is not applied to trailer towing.
What is the maximum safe weight of a trailer? It should never weigh more than the maximum trailer weight with trailer brakes. But even that can be too heavy. It depends on how you plan to use your trailer. For example, speed, altitude, road grades, outside temperature and how often your vehicle is used to pull a trailer are all important. The ideal trailer weight can also depend on any special equipment that you have on your vehicle.

The tongue load of any trailer is an important weight to measure because it affects the total gross vehicle weight (GVW) of your vehicle. This weight includes the curb weight of the vehicle, any cargo you may carry in it, and the people who will be riding in the vehicle. And if you will tow a trailer, you must add the tongue load to the GVW because your vehicle will also be carrying that weight. The trailer tongue should weigh a maximum of 10% of the total loaded trailer weight, within the limits of the maximum permissible trailer tongue load.

After you've loaded your trailer, weigh the trailer and then the tongue, separately, to see if the weights are proper. If they aren't, you may be able to correct them simply by moving some items around in the trailer.

**WARNING**

- **Trailer**
  - Never load a trailer with more weight in the rear than in the front. The front should be loaded with approximately 60% of the total trailer load; the rear should be loaded with approximately 40% of the total trailer load.
  - Never exceed the maximum weight limits of the trailer or trailer towing equipment. Improper loading can result in damage to your vehicle and/or personal injury. Check weights and loading at a commercial scale or highway patrol office equipped with scales.
  - An improperly loaded trailer can cause loss of vehicle control.
VEHICLE WEIGHT

This section will guide you in the proper loading of your vehicle and/or trailer, to keep your loaded vehicle weight within its design rating capability, with or without a trailer. Properly loading your vehicle will provide maximum return of the vehicle design performance. Before loading your vehicle, familiarize yourself with the following terms for determining your vehicle's weight ratings, with or without a trailer, from the vehicle's specifications and the certification label:

**Base curb weight**
This is the weight of the vehicle including a full tank of fuel and all standard equipment. It does not include passengers, cargo, or optional equipment.

**Vehicle curb weight**
This is the weight of your new vehicle when you picked it up from your dealer plus any aftermarket equipment.

**Cargo weight**
This figure includes all weight added to the Base Curb Weight, including cargo and optional equipment.

**GAW (Gross axle weight)**
This is the total weight placed on each axle (front and rear) - including vehicle curb weight and all payload.

**GAWR (Gross axle weight rating)**
This is the maximum allowable weight that can be carried by a single axle (front or rear). These numbers are shown on the certification label. The total load on each axle must never exceed its GAWR.

**GVW (Gross vehicle weight)**
This is the Base Curb Weight plus actual Cargo Weight plus passengers.

**GVWR (Gross vehicle weight rating)**
This is the maximum allowable weight of the fully loaded vehicle (including all options, equipment, passengers and cargo). The GVWR is shown on the certification label.

---

**Overloading**

**WARNING**

**Vehicle weight**

The gross axle weight rating (GAWR) and the gross vehicle weight rating (GVWR) for your vehicle are on the certification label attached to the driver's (or front passenger's) door. Exceeding these ratings can cause an accident or vehicle damage. You can calculate the weight of your load by weighing the items (and people) before putting them in the vehicle. Be careful not to overload your vehicle.
What to do in an emergency

- Road warning
- Hazard warning flasher
- In case of an emergency while driving
  - If the engine stalls at a crossroad or crossing
  - If you have a flat tire while driving
  - If the engine stalls while driving
- If the engine will not start
  - If engine doesn't turn over or turns over slowly
  - If engine turns over normally but does not start
- Emergency starting
  - Jump starting
  - Push-starting
- If the engine overheats
- Tire pressure monitoring system (TPMS)
  - Low tire pressure telltale
  - TPMS (Tire pressure monitoring system) malfunction indicator
  - Changing a tire with TPMS
- If you have a flat tire
  - Jack and tools
  - Removing and storing the spare tire
  - Changing tires
  - Jack label
  - EC Declaration of Conformity for Jack
- Towing
  - Towing service
  - Removable towing hook
  - Emergency towing
  - Emergency commodity
  - Fire extinguisher
- First aid kit
- Triangle reflector
- Tire pressure gauge
The hazard warning flasher serves as a warning to other drivers to exercise extreme caution when approaching, overtaking, or passing your vehicle. It should be used whenever emergency repairs are being made or when the vehicle is stopped near the edge of a roadway.

Depress the flasher switch with the ignition switch in any position. The flasher switch is located in the center console switch panel. All turn signal lights will flash simultaneously.

- The hazard warning flasher operates whether your vehicle is running or not.
- The turn signals do not work when the hazard flasher is on.
- Care must be taken when using the hazard warning flasher while the vehicle is being towed.
IN CASE OF AN EMERGENCY WHILE DRIVING

If the engine stalls at a crossroad or crossing
• If the engine stalls at a crossroad or crossing, set the shift lever in the N (Neutral) position and then push the vehicle to a safe place.
• If your vehicle has a manual transaxle not equipped with a ignition lock switch, the vehicle can move forward by shifting to the 2(Second) or 3(Third) gear and then turning the starter without depressing the clutch pedal.

If you have a flat tire while driving
If a tire goes flat while you are driving:
1. Take your foot off the accelerator pedal and let the vehicle slow down while driving straight ahead. Do not apply the brakes immediately or attempt to pull off the road as this may cause a loss of control. When the vehicle has slowed down to such a speed that it is safe to do so, brake carefully and pull off the road. Drive off the road as far as possible and park on a firm level ground. If you are on a divided highway, do not park in the median area between the two traffic lanes.

2. When the vehicle is stopped, turn on your emergency hazard flashers, set the parking brake and put the transaxle in P (automatic transaxle / dual clutch transmission) or reverse (manual transaxle).
3. Have all passengers get out of the vehicle. Be sure they all get out on the side of the vehicle that is away from traffic.
4. When changing a flat tire, follow the instruction provided later in “If you have a flat tire” on page 7-13.

If the engine stalls while driving
1. Reduce your speed gradually, keeping a straight line. Move cautiously off the road to a safe place.
2. Turn on your emergency flashers.
3. Try to start the engine again. If your vehicle does not start, consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.
What to do in an emergency

**IF THE ENGINE WILL NOT START**

**If engine doesn't turn over or turns over slowly**

1. If your vehicle has an automatic transaxle / dual clutch transmission, be sure the shift lever is in N (Neutral) or P (Park) and the emergency brake is set.
2. Check the battery connections to be sure they are clean and tight.
3. Turn on the interior light. If the light dims or goes out when you operate the starter, the battery is discharged.
4. Check the starter connections to be sure they are securely tightened.
5. Do not push or pull the vehicle to start it. See instructions for “Jump starting” on page 7-05.

**If engine turns over normally but does not start**

1. Check the fuel level.
2. With the ignition switch in the LOCK position, check all connectors at the ignition coils and spark plugs. Reconnect any that may be disconnected or loose.
3. Check the fuel line in the engine compartment.
4. If the engine still does not start, call a professional workshop. Kia recommends to call an authorized Kia dealer/service partner.

---

**WARNING**

*If the engine will not start, do not push or pull the vehicle to start it. This could result in a collision or cause other damage. In addition, push or pull starting may cause the catalytic converter to be overloaded and create a fire hazard.*
Connect cables in numerical order and disconnect in reverse order.

**Jump starting**

Jump starting can be dangerous if done incorrectly. Therefore, to avoid harm to yourself or damage to your vehicle or battery, follow the jump starting procedures. If in doubt, we strongly recommend that you have a competent technician or towing service jump start your vehicle.

**CAUTION**

Use only a 12-volt jumper system. You can damage a 12-volt starting motor, ignition system, and other electrical parts beyond repair by use of a 24-volt power supply (either two 12-volt batteries in series or a 24-volt motor generator set).

**WARNING**

- **Battery**
  Never attempt to check the electrolyte level of the battery as this may cause the battery to rupture or explode causing serious injury.

(Continued)

- Keep all flames or sparks away from the battery. The battery produces hydrogen gas which may explode if exposed to flame or sparks.
  If these instructions are not followed exactly, serious personal injury and damage to the vehicle may occur! If you are not sure how to follow this procedure, seek qualified assistance. Automobile batteries contain sulfuric acid. This is poisonous and highly corrosive. When jump starting, wear protective glasses and be careful not to get acid on yourself, your clothing or on the vehicle.

- Do not attempt to jump start the vehicle if the discharged battery is frozen or if the electrolyte level is low; the battery may rupture or explode.

- Do not allow the (+) and (−) jumper cables to touch. It may cause sparks.

- The battery may rupture or explode when you jump start with a low or frozen battery.
What to do in an emergency

Jump starting procedure
1. Make sure the booster battery is 12-volt and that its negative terminal is grounded.
2. If the booster battery is in another vehicle, do not allow the vehicles come in contact.
3. Turn off all unnecessary electrical loads.
4. Connect the jumper cables in the exact sequence shown in the illustration. First connect one end of a jumper cable to the positive terminal of the discharged battery (1), then connect the other end to the positive terminal on the booster battery (2). Proceed to connect one end of the other jumper cable to the negative terminal of the booster battery (3), then the other end to a solid, stationary, metallic point (for example, the engine lifting bracket) away from the battery (4). Do not connect it to or near any part that moves when the engine is cranked. Do not allow the jumper cables to contact anything except the correct battery terminals or the correct ground. Do not lean over the battery when making connections.

5. Start the engine of the vehicle with the booster battery and let it run at 2,000 rpm, then start the engine of the vehicle with the discharged battery.

Push-starting
Your manual transaxle-equipped vehicle should not be push-started because it might damage the emission control system.
If your vehicle has an automatic transaxle / dual clutch transmission, be sure the shift lever is in N (Neutral) or P (Park) and the emergency brake is set.

CAUTION

Battery cables
Do not connect the jumper cable from the negative terminal of the booster battery to the negative terminal of the discharged battery. This can cause the discharged battery to overheat and crack, releasing battery acid. Make sure to connect one end of the jumper cable to the negative terminal of the booster battery, and the other end to a metallic point, far away from the battery.

WARNING

Never tow a vehicle to start it because the sudden surge forward when the engine starts could cause a collision with the tow vehicle.

If the cause of your battery discharging is not apparent, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
IF THE ENGINE OVERHEATS

If your temperature gauge indicates overheating, you will experience a loss of power, or hear loud pinging or knocking, the engine is probably too hot. If this happens, you should:

1. Pull off the road and stop as soon as it is safe to do so.
2. Place the shift lever in P (automatic transaxle / dual clutch transmission) or neutral (manual transaxle) and set the parking brake. If the air conditioning is on, turn it off.
3. If engine coolant is running out under the vehicle or steam is coming out from the hood, stop the engine. Do not open the hood until the coolant has stopped running or the steaming has stopped. If there is no visible loss of engine coolant and no steam, leave the engine running and check to be sure the engine cooling fan is operating. If the fan is not running, turn the engine off.
4. Check to see if the water pump drive belt is missing. If it is not missing, check to see that it is tight. If the drive belt seems to be satisfactory, check for coolant leaking from the radiator, hoses or under the vehicle. (If the air conditioning had been in use, it is normal for cold water to be draining from it when you stop).
5. If the water pump drive belt is broken or engine coolant is leaking out, stop the engine immediately and call a professional workshop. Kia recommends to call an authorized Kia dealer/service partner.
6. If you cannot find the cause of the overheating, wait until the engine temperature has returned to normal. Then, if coolant has been lost, carefully add coolant to the reservoir to bring the fluid level in the reservoir up to the halfway mark.
7. Proceed with caution, keeping alert for further signs of overheating. If overheating happens again, call a professional workshop. Kia recommends to call an authorized Kia dealer/service partner.

⚠️ WARNING

While the engine is running, keep hair, hands and clothing away from moving parts such as the fan and drive belts to prevent injury.

⚠️ CAUTION

- Serious loss of coolant indicates there is a leak in the cooling system. In this case, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
- When the engine overheats from low engine coolant, suddenly adding engine coolant may cause cracks in the engine. To prevent damage, add engine coolant slowly in small quantities.
TIRE PRESSURE MONITORING SYSTEM (TPMS) (IF EQUIPPED)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.
**NOTICE**

If the TPMS indicator does not illuminate for 3 seconds when the ignition switch is turned to the ON position or engine is running, or if it comes on after blinking for approximately one minute, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**Low tire pressure telltale**

When the tire pressure monitoring system warning indicator is illuminated, one or more of your tires is significantly under-inflated.

If the telltale illuminates, immediately reduce your speed, avoid hard cornering and anticipate increased stopping distances. You should check your tires as soon as possible. Inflate the tires to the proper pressure as indicated on the vehicle’s placard or tire inflation pressure label located on the driver’s side center pillar outer panel. If you cannot reach a service station or if the tire cannot hold the newly added air, replace the low pressure tire with the spare tire.

Then the Low Tire Pressure telltale may flash for approximately one minute and then remain continuously illuminated after restarting and about 20 minutes of continuous driving before you have the low pressure tire repaired and replaced on the vehicle.

**CAUTION**

- In winter or cold weather, the low tire pressure telltale may be illuminated if the tire pressure was adjusted to the recommended tire inflation pressure in warm weather. It does not mean your TPMS is malfunctioning because the decreased temperature leads to a lowering of tire pressure.
- When you drive your vehicle from a warm area to a cold area or from a cold area to a warm area, or the outside temperature is higher or lower, you should check the tire inflation pressure and adjust the tires to the recommended cold tire inflation pressure.
- When filling tires with more air, conditions to turn off the low tire pressure telltale may not be met. This is because a tire inflator has a margin of error in performance. The low tire pressure telltale will be turned off if the tire pressure is above the recommended tire inflation pressure.
**WARNING**

Low pressure damage

Significantly low tire pressure makes the vehicle unstable and can contribute to loss of vehicle control and increased braking distances. Continued driving on low pressure tires can cause the tires to overheat and fail.

---

**TPMS (Tire pressure monitoring system) malfunction indicator**

The TPMS malfunction indicator will illuminate after it blinks for approximately one minute when there is a problem with the Tire Pressure Monitoring System. If the system is able to correctly detect an under-inflation warning at the same time as system failure then it will illuminate the TPMS malfunction indicator. In this case, have the system checked by a professional workshop to determine the cause of the problem. Kia recommends to visit an authorized Kia dealer/service partner.

---

**CAUTION**

- The TPMS malfunction indicator may be illuminated if the vehicle is moving around electric power supply cables or radios transmitter such as at police stations, government and public offices, broadcasting stations, military installations, airports, or transmitting towers, etc. This can interfere with normal operation of the Tire Pressure Monitoring System (TPMS).

- The TPMS malfunction indicator may illuminate if snow chains or some separately purchased devices such as notebook computers, mobile charger, remote starter, navigation etc. are used in the vehicle. This can interfere with normal operation of the Tire Pressure Monitoring System (TPMS).

---

**Changing a tire with TPMS**

If you have a flat tire, the Low Tire Pressure telltale will come on. In this case, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

---

**CAUTION**

Never use a puncture-repairing agent not approved by Kia to repair and/or inflate a low pressure tire. The tire sealant not approved by Kia may damage the tire pressure sensor. The sealant on the tire pressure sensor and wheel shall be eliminated when you replace the tire with a new one.

Each wheel is equipped with a tire pressure sensor mounted inside the tire behind the valve stem. You must use TPMS specific wheels. Have your tires serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner. Even if you replace the low pressure tire with the spare tire, the Low Tire Pressure Telltale will blink or remain on until the low pressure tire is repaired and placed on the vehicle. After you replace the low pressure tire with the spare tire, the Low Tire Pressure Telltale may blink or illuminate after driving about 20 minutes because the TPMS sensor mounted on the spare wheel is not initiated.
Once the low pressure tire is inflated to the recommended pressure and installed on the vehicle or the TPMS sensor mounted on the replaced spare wheel is initiated by an authorized Kia dealer, the TPMS malfunction indicator and the low tire pressure telltale will extinguish within a few minutes of driving.

If the indicator is not extinguished after a few minutes of driving, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ CAUTION

If original mounted tire is replaced with the spare tire, the TPMS sensor on the replaced spare wheel should be initiated and the TPMS sensor on the original mounted wheel should be deactivated by a Kia dealer. If the TPMS sensor on the original mounted wheel located in the spare tire carrier still activates, the tire pressure monitoring system may not operate properly. Have the tire with TPMS serviced or replaced by an authorized Kia dealer.

You may not be able identify a low tire by simply looking at it. Always use a good quality tire pressure gauge to measure the tire's inflation pressure. Please note that a tire that is hot (from being driven) will have a higher pressure measurement than a tire that is cold (from sitting stationary for at least 3 hours and driven less than 1 mile (1.6 km) during that 3 hour period).

Allow the tire to cool before measuring the inflation pressure. Always be sure the tire is cold before inflating to the recommended pressure.

A cold tire means the vehicle has been sitting for 3 hours and driven for less than 1 mile (1.6 km) in that 3 hour period.

(Continued)

- If you feel any vehicle instability, immediately take your foot off the accelerator, apply the brakes gradually and with light force, and slowly move to a safe position off the road.

⚠️ WARNING

- Protecting TPMS
  Tampering with, modifying, or disabling the Tire Pressure Monitoring System (TPMS) components may interfere with the system’s ability to warn the driver of low tire pressure conditions and/or TPMS malfunctions. Tampering with, modifying, or disabling the Tire Pressure Monitoring System (TPMS) components may void the warranty for that portion of the vehicle.

⚠️ WARNING

- TPMS
  - The TPMS cannot alert you to severe and sudden tire damage caused by external factors such as nails or road debris.
  
(Continued)

⚠️ WARNING

- For EUROPE
(Continued)
(Continued)

• Do not modify the vehicle, it may interfere with the TPMS function.

• The wheels on the market do not have a TPMS sensor. For your safety, use parts for replacement from a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

• If you use the wheels on the market, use a TPMS sensor approved by an authorized Kia dealer. If your vehicle is not equipped with a TPMS sensor or TPMS does not work properly, you may fail the periodic vehicle inspection conducted in your country.

※ All vehicles sold in the EUROPE market during below period must be equipped with TPMS.
  - New model vehicle:
    Nov. 1, 2012～

  - Current model vehicle:
    Nov. 1, 2014～ (Based on vehicle registrations)
**IF YOU HAVE A FLAT TIRE**

**Jack and tools**

To prevent the jack from “rattling” while the vehicle is in motion, store it properly.
Follow jacking instructions to reduce the possibility of personal injury.

The jack, jack handle, wheel lug nut wrench are stored in the luggage compartment.
Pull up the luggage box cover to reach this equipment.
1. Jack handle
2. Jack
3. Wheel lug nut wrench

**Jacking instructions**
The jack is provided for emergency tire changing only.

---

(Continued)

- Do not get under a vehicle that is supported by a jack.
- Do not start or run the engine while the vehicle is on the jack.
- Do not allow anyone remain in the vehicle while it is on the jack.
- Make sure any children present are in a secure place away from the road and from the vehicle to be raised with the jack.

---

**WARNING**

- **Changing tires**
  - Never attempt vehicle repairs in the traffic lanes of a public road or highway.
  - Always move the vehicle completely off the road and onto the shoulder before trying to change a tire. The jack should be used on firm level ground. If you cannot find a firm level place off the road, call a towing service company for assistance.
  - Be sure to use the correct front and rear jacking positions on the vehicle; never use the bumpers or any other part of the vehicle for jacking support.
  - The vehicle can roll off the jack causing serious injury or death.

(Continued)
Removing and storing the spare tire

Turn the tire hold-down wing bolt counterclockwise. Store the tire in the reverse order of removal. To prevent the spare tire and tools from "rattling" while the vehicle is in motion, store them properly.

Changing tires

1. Park on a level surface and apply the parking brake firmly.
2. Shift the shift lever into R (Reverse) with manual transaxle or P (Park) with automatic transaxle / dual clutch transmission.
3. Activate the hazard warning flasher.
4. Remove the wheel lug nut wrench, jack, jack handle, and spare tire from the vehicle.
5. Block both the front and rear of wheel that is diagonally opposite the jack position.

WARNING

Changing a tire (Continued)
6. Loosen the wheel lug nuts counterclockwise one turn each, but do not remove any nut until the tire has been raised off the ground.

7. Place the jack at the front (1) or rear (2) jacking position closest to the tire you are changing. Place the jack at the designated locations under the frame. The jacking positions are plates welded to the frame with two tabs and a raised dot to index with the jack.

8. Insert the jack handle into the jack and turn it clockwise, raising the vehicle until the tire just clears the ground. This measurement is approximately 30 mm (1.2 in). Before
What to do in an emergency

removing the wheel lug nuts, make sure the vehicle is stable and that there is no chance for movement or slippage.

9. Loosen the wheel nuts and remove them with your fingers. Slide the wheel off the studs and lay it flat so it cannot roll away. To put the wheel on the hub, pick up the spare tire, line up the holes with the studs and slide the wheel onto them. If this is difficult, tip the wheel slightly and get the top hole in the wheel lined up with the top stud. Then jiggle the wheel back and forth until the wheel can be slid over the other studs.

(Continued)

*face between the wheel and hub, the wheel nuts could come loose and cause the loss of a wheel. Loss of a wheel may result in loss of control of the vehicle. This may cause serious injury or death.*

10. To reinstall the wheel, hold it on the studs, put the wheel nuts on the studs and tighten them finger tight. Jiggle the tire to be sure it is completely seated, then tighten the nuts as much as possible with your fingers again.

11. Lower the vehicle to the ground by turning the wheel nut wrench counterclockwise.

Then position the wrench as shown in the drawing and tighten the wheel nuts. Be sure the socket is seated completely over the nut. Do not stand on the wrench handle or use an extension pipe over the wrench handle. Go around the wheel tightening every other nut until they are all tight. Then double-check each nut for tightness. After changing wheels, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**Wheel nut tightening torque:**
Steel wheel & aluminum alloy wheel: 9~11 kg·m (65~79 lb·ft)
If you have a tire gauge, remove the valve cap and check the air pressure. If the pressure is lower than recommended, drive slowly to the nearest service station and inflate to the correct pressure. If it is too high, adjust it until it is correct. Always reinstall the valve cap after checking or adjusting tire pressure. If the cap is not replaced, air may leak from the tire. If you lose a valve cap, buy another and install it as soon as possible.

After you have changed wheels, always secure the flat tire in its place and return the jack and tools to their proper storage locations.

⚠️ CAUTION

Your vehicle has metric threads on the wheel studs and nuts. Make certain during wheel removal that the same nuts that were removed are reinstalled – or, if replaced, that nuts with metric threads and the same chamfer configuration are used. Installation of a non-metric thread nut on a metric stud or vice-versa will not secure the wheel to the hub properly and will damage the stud so that it must be replaced.

(Continued)

⚠️ WARNING

Note that most lug nuts do not have metric threads. Be sure to use extreme care in checking for thread style before installing aftermarket lug nuts or wheels. If in doubt, consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.

(Continued)

⚠️ WARNING

■ Inadequate spare tire pressure

Check the inflation pressures as soon as possible after installing the spare tire. Adjust it to the specified pressure, if necessary. Refer to “Tires and wheels” on page 9-08.

Important - use of compact spare tire (if equipped)

Your vehicle is equipped with a compact spare tire. This compact spare tire takes up less space than a regular-size tire. This tire is smaller than a conventional tire and is designed for temporary use only.

⚠️ CAUTION

• You should drive carefully when the compact spare is in use. The compact spare should be replaced by the proper conventional tire and rim at the first opportunity.

(Continued)
The compact spare tire is for emergency use only. Do not operate your vehicle on this compact spare at the speed over 80 km/h (50 mph). The original tire should be repaired or replaced as soon as possible to avoid failure of the spare possibly leading to personal injury or death.

• Avoid driving over obstacles. The compact spare tire diameter is smaller than the diameter of a conventional tire and reduces the ground clearance approximately 2.5 cm (1 inch), which could result in damage to the vehicle.

• Do not exceed the vehicle’s maximum load rating or the load-carrying capacity shown on the sidewall of the compact spare tire.

• Ensure that you drive slowly enough to avoid all hazards. Any road hazard, such as a pothole or debris, could seriously damage the compact spare.

• Do not use the temporary compact tire on any other vehicle because this tire has been designed especially for your vehicle.

• Do not use more than one temporary compact tire at a time.

• Do not tow a trailer while the temporary compact tire is installed.

• Temporary compact tire should not be used on any other wheels, nor should standard tires, snow tires, wheel covers or trim rings be used with the temporary compact spare wheel. If such use is attempted, damage to these items or other car components may occur.

• Temporary compact tire should not be installed on the front axle if the vehicle must be driven in snow or on ice.

The compact spare should be inflated to 420 kPa (60 psi).

Check the inflation pressure after installing the spare tire. Adjust it to the specified pressure, as necessary.

When using a compact spare tire, observe the following precautions:

• Under no circumstances should you exceed 80 km/h (50 mph): a higher speed could damage the tire.

• Do not use tire chains on the temporary compact tire. Because of the smaller size, a tire chain will not fit properly. This could damage the vehicle and result in loss of the chain.

• The temporary compact tire tread life is shorter than a regular tire. Inspect your temporary compact tire regularly and replace worn compact spare tires with the same size and design, mounted on the same wheel.

(Continued)

• The operation of this vehicle is not recommended with more than one compact spare tire in use at the same time.
The actual Jack label in the vehicle may differ from the illustration. For more detailed specifications, refer to the label attached to the jack.

1. Model Name
2. Maximum allowable load
3. When using the jack, set your parking brake.
4. When using the jack, stop the engine.
5. Do not get under a vehicle that is supported by a jack.
6. The designated locations under the frame
7. When supporting the vehicle, the base plate of jack must be vertical under the lifting point.
8. Shift into Reverse gear on vehicles with manual transmission or move the shift lever to the P position on vehicles with automatic transmission.
9. The jack should be used on firm level ground.
10. Jack manufacturer
11. Production date
12. Representative company and address
What to do in an emergency

EC Declaration of Conformity for Jack

EC Declaration of Conformity according to EC Machinery Directive 2006/42/EC

TOWING

Towing service

If emergency towing is necessary, we recommend having it done by an authorized Kia dealer or a commercial tow-truck service. Proper lifting and towing procedures are necessary to prevent damage to the vehicle. The use of wheel dollies or flatbed is recommended.

It is acceptable to tow the vehicle with the rear wheels on the ground (without dollies) and the front wheels off the ground. If any of the loaded wheels or suspension components are damaged or the vehicle is being towed with the front wheels on the ground, use a towing dolly under the front wheels. When being towed by a commercial tow truck and wheel dollies are not used, the front of the vehicle should always be lifted, not the rear.

CAUTION

- Do not tow the vehicle backwards with the front wheels on the ground as this may cause damage to the vehicle.
- Do not tow with sling-type equipment. Use wheel lift or flatbed equipment.

When towing your vehicle in an emergency without wheel dollies:

1. Set the ignition switch in the ACC position.
2. Place the transaxle shift lever in N (Neutral).
3. Release the parking brake.

CAUTION

Failure to place the transaxle shift lever in N (Neutral) may cause internal damage to the transaxle.
Removable towing hook (if equipped)

1. Open the trunk lid, and remove the towing hook from the tool case.
2. Remove the hole cover pressing the lower part of the cover on the bumper.
3. Install the towing hook by turning it clockwise into the hole until it is fully secured.
4. Remove the towing hook and install the cover after use.

Emergency towing

If towing is necessary, we recommend you to have it done by an authorized Kia dealer or a commercial tow truck service. If towing service is not available in an emergency, your vehicle may be temporarily towed using a cable or chain secured to the emergency towing hook under the front (or rear) of the vehicle. Use extreme caution when towing the vehicle. A driver must be in the vehicle to steer it and operate the brakes. Towing in this manner may be done only on hard-surfaced roads for a short distance and at low speed. Also, the wheels, axles, power train, steering and brakes must all be in good condition.
• Do not use the tow hooks to pull a vehicle out of mud, sand or other conditions from which the vehicle cannot be driven out under its own power.

• Avoid towing a vehicle heavier than the vehicle doing the towing.

• The drivers of both vehicles should communicate with each other frequently.

⚠️ CAUTION

• Attach a towing strap to the tow hook.

• Using a portion of the vehicle other than the tow hooks for towing may damage the body of your vehicle.

• Use only a cable or chain specifically intended for use in towing vehicles. Securely fasten the cable or chain to the towing hook provided.

• Before emergency towing, check if the hook is not broken or damaged.

• Fasten the towing cable or chain securely to the hook.

• Do not use the tow hooks to pull a vehicle out of mud, sand or other conditions from which the vehicle cannot be driven out under its own power.

• Avoid towing a vehicle heavier than the vehicle doing the towing.

• The drivers of both vehicles should communicate with each other frequently.

• Do not jerk the hook. Apply it steadily and with even force.

• To avoid damaging the hook, do not pull from the side or at a vertical angle. Always pull straight ahead.

⚠️ WARNING

Use extreme caution when towing the vehicle.

• Avoid sudden starts or erratic driving maneuvers which would place excessive stress on the emergency towing hook and towing cable or chain. The hook and towing cable or chain may break and cause serious injury or damage.

• If the disabled vehicle is unable to be moved, do not forcibly continue the towing. We recommend that you contact an authorized Kia dealer or a commercial tow truck service for assistance.

• Tow the vehicle as straight ahead as possible.

• Keep away from the vehicle during towing.

• Use a towing strap less than 5 m (16 feet) long. Attach a white or red cloth (about 30 cm (12 inches) wide) in the middle of the strap for easy visibility.
What to do in an emergency

• Drive carefully so that the towing strap is not loosened during towing.

Emergency towing precautions
• Turn the ignition switch to ACC so the steering wheel isn’t locked.
• Place the transaxle shift lever in N (Neutral).
• Release the parking brake.
• Press the brake pedal with more force than normal since you will have reduced brake performance.
• More steering effort will be required because the power steering system will be disabled.
• If you are driving down a long hill, the brakes may overheat and brake performance will be reduced. Stop often and let the brakes cool off.

⚠️ CAUTION

Automatic transaxle / Dual clutch transmission

(Continued)

• If the car is being towed with all four wheels on the ground, it can be towed only from the front. Be sure that the transaxle is in neutral. Be sure the steering is unlocked by placing the ignition switch in the ACC position. A driver must be in the towed vehicle to operate the steering and brakes.

• To avoid serious damage to the automatic transaxle / dual clutch transmission, limit the vehicle speed to 15 km/h (10 mph) and drive less than 1.5 km (1 mile) when towing.

• Before towing, check the automatic transaxle / dual clutch transmission for fluid leaks under your vehicle. If the automatic transaxle / dual clutch transmission fluid is leaking, flatbed equipment or a towing dolly must be used.
EMERGENCY COMMODITY (IF EQUIPPED)

There are some emergency commodities in the vehicle to help you respond to the emergency situation.

Fire extinguisher
If there is small fire and you know how to use the fire extinguisher, take the following steps carefully.
1. Pull the pin at the top of the extinguisher that keeps the handle from being accidentally pressed.
2. Aim the nozzle toward the base of the fire.
3. Stand approximately 2.5 m (8 ft) away from the fire and squeeze the handle to discharge the extinguisher. If you release the handle, the discharge will stop.
4. Sweep the nozzle back and forth at the base of the fire. After the fire appears to be out, watch it carefully since it may re-ignite.

First aid kit
There are some items such as scissors, bandage and adhesive tape and etc. in the kit to give first aid to an injured person.

Triangle reflector
Place the triangle reflector on the road to warn oncoming vehicles during emergencies, such as when the vehicle is parked by the roadside due to any problems.

Tire pressure gauge (If equipped)
Tires normally lose some air in day-to-day use, and you may have to add a few pounds of air periodically and it is not usually a sign of a leaking tire, but of normal wear. Always check tire pressure when the tires are cold because tire pressure increases with temperature.
To check the tire pressure, take the following steps:
1. Unscrew the inflation valve cap that is located on the rim of the tire.
2. Press and hold the gauge against the tire valve. Some air will escape as you begin and more will escape if you don’t press the gauge in firmly.
3. A firm non-leaking push will activate the gauge.
4. Read the tire pressure on the gauge to know whether the tire pressure is low or high.
5. Adjust the tire pressures to the specified pressure. Refer to “Tires and wheels” on page 9-08.
6. Reinstall the inflation valve cap.

What to do in an emergency

MAINTENANCE SERVICES

You should exercise the utmost care to prevent damage to your vehicle and injury to yourself whenever performing any maintenance or inspection procedures. Inadequate, incomplete or insufficient servicing may result in operational problems with your vehicle that could lead to vehicle damage, an accident, or personal injury.

Owner's responsibility

*NIGHTICE

Maintenance Service and Record Retention are the owner's responsibility.

Have your vehicle serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

You should retain documents that show proper maintenance has been performed on your vehicle in accordance with the scheduled maintenance service charts shown on the following pages. You need this information to establish your compliance with the servicing and maintenance requirements of your vehicle warranties. Detailed warranty information is provided in your Warranty & Maintenance book. Repairs and adjustments required as a result of improper maintenance or a lack of required maintenance are not covered when your vehicle is covered by warranty.

Owner maintenance precautions

Improper or incomplete service may result in problems. This section gives instructions only for the maintenance items that are easy to perform.

*NIGHTICE

Improper owner maintenance during the warranty period may affect

(Continued)

warranty coverage. For details, read the separate Warranty & Maintenance book provided with the vehicle. If you're unsure about any servicing or maintenance procedure, have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

(Continued)

WARNING

Maintenance work

(Continued)
• Performing maintenance work on a vehicle can be dangerous. You can be seriously injured while performing some maintenance procedures. If you lack sufficient knowledge and experience or the proper tools and equipment to do the work, have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

• Working under the hood with the engine running is dangerous. It becomes even more dangerous when you wear jewelry or loose clothing. These can become entangled in moving parts and result in injury. Therefore, if you must run the engine while working under the hood, make certain that you remove all jewelry (especially rings, bracelets, watches, and necklaces) and all neckties, scarves, and similar loose clothing before getting near the engine or cooling fans.

(Continued)

(Continued)

• Do not leave gloves, rags or any other combustible material in the engine compartment. Doing so may cause a heat-induced fire.

(Continued)

(Continued)

(Continued)

(Continued)

(Continued)

(Continued)

(Continued)

CAUTION

• Do not put heavy objects or apply excessive force on top of the engine cover (if equipped) or fuel related parts.

• When you inspect the fuel system (fuel lines and fuel injection devices), contact a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

• Do not drive long time with the engine cover (if equipped) removed.

• When checking the engine room, do not go near fire. Fuel, washer fluid, etc. are flammable oils that may cause fire.

• Before touching the battery, ignition cables and electrical wiring, you should disconnect the battery "-" terminal. You may get an electric shock from the electric current.

• When you remove the interior trim cover with a flat bed (-) driver, be careful not to damage the cover.

• Be careful when you replace and clean bulbs to avoid burns or electrical shock.

(Continued)
OWNER MAINTENANCE

The following lists are vehicle checks and inspections that should be performed at the frequencies indicated to help ensure safe, dependable operation of your vehicle.

If you have any question, consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.

These Owner Maintenance Checks are generally not covered by warranties and you may be charged for labor, parts and lubricants used.

**Owner maintenance schedule**

**When you stop for fuel:**
- Check the engine oil level.
- Check the coolant level in the coolant reservoir.
- Check the windshield washer fluid level.
- Look for low or under-inflated tires.

**While operating your vehicle:**
- Note any changes in the sound of the exhaust or any smell of exhaust fumes in the vehicle.
- Check for vibrations in the steering wheel. Notice any increased steering effort or looseness in the steering wheel, or change in its straight-ahead position.
- Notice if your vehicle constantly turns slightly or “pulls” to one side when traveling on smooth, level road.
- When stopping, listen and check for unusual sounds, pulling to one side, increased brake pedal travel or “hard-to-push” brake pedal.
- If any slipping or changes in the operation of your transaxle occurs, check the transaxle fluid level.
- Check the automatic transaxle / dual clutch transmission P (Park) function.
- Check the parking brake.
- Check for fluid leaks under your vehicle (water dripping from the air conditioning system during or after use is normal).

**At least monthly:**
- Check the coolant level in the engine coolant reservoir.
- Check the operation of all exterior lights, including the stoplights, turn signals and hazard warning flashers.
- Check the inflation pressures of all tires including the spare.

**At least twice a year (i.e., every Spring and Fall):**
- Check the radiator, heater and air conditioning hoses for leaks or damage.
- Check the windshield washer spray and wiper operation. Clean the wiper blades with clean cloth dampened with washer fluid.
- Check the headlight alignment.
• Check the muffler, exhaust pipes, shields and clamps.
• Check the lap/shoulder belts for wear and function.
• Check for worn tires and loose wheel lug nuts.

**At least once a year:**
• Clean the body and door drain holes.
• Lubricate the door hinges and checks, and hood hinges.
• Lubricate the door and hood locks and latches.
• Lubricate the door rubber weatherstrips.
• Check the air conditioning system.
• Inspect and lubricate the automatic transaxle / dual clutch transmission linkage and controls.
• Clean the battery and terminals.
• Check the brake fluid level.
SCHEDULED MAINTENANCE SERVICE

Follow the Normal Maintenance Schedule if the vehicle is usually operated where none of the following conditions apply. If any of the following conditions apply, follow the Maintenance Under Severe Usage Conditions.

• Repeated driving short distance of less than 8 km (5 miles) in normal temperature or less than 16 km (10 miles) in freezing temperature.
• Extensive engine idling or low speed driving for long distances
• Driving on rough, dusty, muddy, unpaved, graveled or salt-spread roads
• Driving in areas using salt or other corrosive materials or in very cold weather
• Driving in heavy dust condition
• Driving in heavy traffic area
• Driving on uphill, downhill, or mountain road repeatedly
• Towing a trailer or using a camper, or roof rack
• Driving as a patrol car, taxi, other commercial use of vehicle towing
• Driving over 170 km/h (106 mile/h).
• Frequently driving in stop-and-go condition.

If your vehicle is operated under the above conditions, you should inspect, replace or refill more frequently than the following Normal Maintenance Schedule. After the periods or distance shown in the chart, continue to follow the prescribed maintenance intervals.
NORMAL MAINTENANCE SCHEDULE

The following maintenance services must be performed to ensure good emission control and performance. Keep receipts for all vehicle emission services to protect your warranty. Where both mileage and time are shown, the frequency of service is determined by whichever occurs first.

*1: Check the engine oil level and leak every 500 km (350 miles) or before starting a long trip.

*2: The engine oil level should be checked regularly and maintained properly. Operating with an insufficient amount oil can damage the engine, and such damage is not covered by warranty.

*3: When adding coolant, use only deionized water or soft water for your vehicle and never mix hard water in the coolant filled at the factory. An improper coolant mixture can result in serious malfunction or engine damage.

*4: • Adjust alternator, water pump and air conditioner (if equipped) drive belt. Inspect and if necessary repair or replace.
   • Inspect drive belt tensioner, idler and alternator pulley and if necessary correct or replace.

*5: For your convenience, it can be replaced prior to it's interval when you do maintenance of other items.

*6: Inspect for excessive valve noise and/or engine vibration and adjust if necessary. In this case, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

*7: Manual transaxle fluid should be changed anytime it has been submerged in water.

*8: Dual clutch transmission (DCT) fluid should be changed anytime it has been submerged in water.

*9: Kia recommends that you use unleaded gasoline which has an octane rating of RON (Research Octane Number) 95 / AKI (Anti Knock Index) 91 or higher (for Europe) or Octane Rating of RON (Research Octane Number) 91 / AKI (Anti-Knock Index) 87 or higher (except Europe). For customers who do not use good quality gasolines including fuel additives regularly, and have problems starting or the engine does not run smoothly, one bottle of additives added to the fuel tank at every 15,000 km (for Europe)/ 10,000 km (except Europe). Additives are available from a professional workshop along with information on how to use them. Kia recommends to visit an authorized Kia dealer/service partner.

*10: This maintenance schedule depends on fuel quality. It is applicable only when using a qualified fuel <"EN590 or equivalent">. If the diesel fuel specifications don't meet the EN590, it must be replaced according to the severe maintenance schedule.
**Footnotes:**

*11: This maintenance schedule depends on fuel quality. It is applicable only when using a qualified fuel "EN590 or equivalent". If the diesel fuel specifications don't meet the EN590, it must be replaced more frequently. If there are some important safety matters like fuel flow restriction, surging, loss of power, hard starting problem etc., replace the fuel filter immediately regardless of maintenance schedule and consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.

*12: Middle East includes Libya, Algeria, Morocco, Tunisia, Sudan, Egypt and Iran.

SEVERE DRIVING CONDITIONS
A: Repeatedly driving short distance of less than 5 miles (8 km) in normal temperature or less than 10 miles (16 km) in freezing temperature
B: Extensive engine idling or low speed driving for long distances
C: Driving on rough, dusty, muddy, unpaved, graveled or salt-spread roads
D: Driving in areas using salt or other corrosive materials or in very cold weather
E: Driving in heavy dust condition
F: Driving in heavy traffic area.
G: Driving on uphill, downhill, or mountain roads
H: Towing a trailer or using a camper on roof rack.
I: Driving for patrol car, taxi, commercial car or vehicle towing
J: Driving in very cold weather.
K: Driving over 170 km/h (106 mile/h)
L: Frequently driving in stop-and-go conditions
M: Driving in heavy traffic area over 32°C (90°F)
EXPLANATION OF SCHEDULED MAINTENANCE ITEMS

Engine oil and filter
The engine oil and filter should be changed at the intervals specified in the maintenance schedule. If the vehicle is being driven in severe conditions, more frequent oil and filter changes are required.

Drive belts
Inspect all drive belts for evidence of cuts, cracks, excessive wear or oil saturation and replace if necessary. Drive belts should be checked periodically for proper tension and adjusted as necessary.

Fuel filter cartridge (for diesel)
A clogged filter can limit the speed at which the vehicle may be driven, damage the emission system and cause multiple issues such as hard starting. If an excessive amount of foreign matter accumulates in the fuel tank, the filter may require replacement more frequently.
After installing a new filter, run the engine for several minutes, and check for leaks at the connections.
Have the fuel filter replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Fuel filter (for gasoline)
Kia gasoline vehicle is equipped a lifetime fuel filter that integrated with the fuel tank. Regular maintenance or replacement is not needed but depends on fuel quality. If there are some important safety matters like fuel flow restriction, surging, loss of power, hard starting problem etc, fuel filter inspection or replace is needed.
Have the fuel filter inspected or replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Fuel lines, fuel hoses and connections
Check the fuel lines, fuel hoses and connections for leakage and damage. Have the fuel lines, fuel hoses and connections replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ WARNING

Diesel only
Never work on the injection system with the engine running or within 30 seconds after shutting off the engine. High pressure pump, rail, injectors and high pressure pipes are subject to high pressure even after the engine stops. The fuel jet produced by fuel leaks may cause serious injury, if it touches the body. People using pacemakers should not move more than 30 cm closer to the ECU or wiring harness within the engine room while the engine is running, since the high currents in the Common Rail system produce considerable magnetic fields.
Vapor hose and fuel filler cap
The vapor hose and fuel filler cap should be inspected at those intervals specified in the maintenance schedule. Make sure that a new vapor hose or fuel filler cap is correctly replaced.

Vacuum crankcase ventilation hoses (if equipped)
Inspect the surface of hoses for evidence of heat and/or mechanical damage. Hard and brittle rubber, cracking, tears, cuts, abrasions, and excessive swelling indicate deterioration. Particular attention should be paid to examine those hose surfaces nearest to high heat sources, such as the exhaust manifold.
Inspect the hose routing to assure that the hoses do not come in contact with any heat source, sharp edges or moving component which might cause heat damage or mechanical wear. Inspect all hose connections, such as clamps and couplings, to make sure they are secure, and that no leaks are present. Hoses should be replaced immediately if there is any evidence of deterioration or damage.

Air cleaner filter
Have the air cleaner filter replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Spark plugs (for gasoline engine)
Make sure to install new spark plugs of the correct heat range.

**WARNING**

Do not disconnect and inspect spark plugs when the engine is hot. You may burn yourself.

Valve clearance (for gasoline engine)
Inspect for excessive valve noise and/or engine vibration and adjust if necessary. In this case, have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Coolant
The coolant should be changed at the intervals specified in the maintenance schedule.

Manual transaxle fluid (if equipped)
Inspect the manual transaxle fluid according to the maintenance schedule.

Dual clutch transmission fluid (if equipped)
Inspect the dual clutch transmission fluid according to the maintenance schedule.

Automatic transaxle fluid (if equipped)
Automatic transaxle fluid should not be checked under normal usage conditions. Have the automatic transmission fluid changed by a professional workshop according to the maintenance schedule. Kia recommends to visit an authorized Kia dealer/service partner.

Cooling system
Check the cooling system components, such as the radiator, coolant reservoir, hoses and connections for leakage and damage. Replace any damaged parts.
**NOTICE**

Automatic transaxle fluid color is basically red. As the vehicle is driven, the automatic transaxle fluid will begin to look darker. It is normal condition and you should not judge the need to replace the fluid based upon the changed color.

![CAUTION](https://www.kia-hotline.com)

The use of a non-specified fluid could result in transaxle malfunction and failure. Use only specified automatic transaxle fluid. (Refer to “Recommended lubricants and capacities” on page 9-11.)

**Brake hoses and lines**

Visually check for proper installation, chafing, cracks, deterioration and any leakage. Replace any deteriorated or damaged parts immediately.

**Brake/Clutch fluid (if equipped)**

Check the brake/clutch fluid level in the brake/clutch fluid reservoir. The level should be between “MIN” and “MAX” marks on the side of the reservoir. Use only hydraulic brake/clutch fluid conforming to DOT 3 or DOT 4 specification.

**Parking brake**

Inspect the parking brake system including the parking brake lever (or pedal) and cables.

**Brake discs, pads, calipers and rotors**

Check the pads for excessive wear, discs for run out and wear, and calipers for fluid leakage.

For more information on checking the pads or lining wear limit, we recommend to refer to the Kia web site. (https://www.kia-hotline.com)

**Suspension mounting bolts**

Check the suspension connections for looseness or damage. Retighten to the specified torque.

**Steering gear box, linkage & boots/lower arm ball joint**

With the vehicle stopped and engine off, check for excessive free-play in the steering wheel. Check the linkage for bends or damage. Check the dust boots and ball joints for deterioration, cracks, or damage. Replace any damaged parts.

**Drive shafts and boots**

Check the drive shafts, boots and clamps for cracks, deterioration, or damage. Replace any damaged parts and, if necessary, repack the grease.

**Air conditioning refrigerant (if equipped)**

Check the air conditioning lines and connections for leakage and damage.
1. Be sure the vehicle is on level ground.

2. Start the engine and allow it to reach normal operating temperature.

3. Turn the engine off and wait for a few minutes (about 5 minutes) for the oil to return to the oil pan.

4. Pull the dipstick out, wipe it clean, and re-insert it fully.

**WARNING**

- **Radiator hose**
  Be very careful not to touch the radiator hose when checking or adding the engine oil as it may be hot enough to burn you.

5. Pull the dipstick out again and check the level. The level should be between F and L.

**CAUTION**

- Do not overfill the engine oil. It may damage the engine.

(Continued)

- Do not spill engine oil, when adding or changing engine oil. If you drop the engine oil on the engine room, wipe it off immediately.

- When you wipe the oil level gauge, you should wipe it with a clean cloth. When mixed with debris, it can cause engine damage.
If it is near or at L, add enough oil to bring the level to F. Do not overfill. Use a funnel to help prevent oil from being spilled on engine components. Use only the specified engine oil. (Refer to “Recommended lubricants and capacities” on page 9-11.)

**CAUTION**

Do not overfill the engine oil. It may damage the engine.

---

**Changing the engine oil and filter**

Have the engine oil and filter replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**WARNING**

Used engine oil may cause skin irritation or cancer if left in contact with the skin for prolonged periods of time. Used engine oil contains chemicals that have caused cancer in laboratory animals. Always protect your skin by washing your hands thoroughly with soap and warm water as soon as possible after handling used oil.
ENGINE OIL (DIESEL)

Checking the engine oil level

1. Be sure the vehicle is on level ground.
2. Start the engine and allow it to reach normal operating temperature.
3. Turn the engine off and wait for a few minutes (about 5 minutes) for the oil to return to the oil pan.
4. Pull the dipstick out, wipe it clean, and re-insert it fully.

5. Pull the dipstick out again and check the level. The level should be between F and L.

**WARNING**
- **Radiator hose**

Be very careful not to touch the radiator hose when checking or adding the engine oil as it may be hot enough to burn you.

**CAUTION**
- **Do not spill engine oil, when adding or changing engine oil.** If you drop the engine oil on the engine room, wipe it off immediately.
- **When you wipe the oil level gauge, you should wipe it with a clean cloth.** When mixed with debris, it can cause engine damage.

If it is near or at L, add enough oil to bring the level to F. **Do not overfill.**

*Use only the specified engine oil. (Refer to “Recommended lubricants and capacities” on page 9-11.)*

**CAUTION**
- **Do not overfill the engine oil.** It may damage the engine.
Changing the engine oil and filter
Have the engine oil and filter replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ WARNING
Used engine oil may cause skin irritation or cancer if left in contact with the skin for prolonged periods of time. Used engine oil contains chemicals that have caused cancer in laboratory animals. Always protect your skin by washing your hands thoroughly with soap and warm water as soon as possible after handling used oil.
ENGINE COOLANT

The high-pressure cooling system has a reservoir filled with year round antifreeze coolant. The reservoir is filled at the factory. Check the antifreeze protection and coolant level at least once a year, at the beginning of the winter season, and before traveling to a colder climate.

**CAUTION**

- When the engine overheats from low engine coolant, suddenly adding engine coolant may cause cracks in the engine. To prevent damage, add engine coolant slowly in small quantities.
- Do not drive with no engine coolant. It may cause water pump failure and engine seizure, etc.

**WARNING**

- Never attempt to remove the radiator cap while the engine is operating or hot. Doing so might lead to cooling system and engine damage. Also, hot coolant or steam could cause serious personal injury.
- Turn the engine off and wait until it cools down. Use extreme care when removing the radiator cap. Wrap a thick towel around it, and turn it counterclockwise slowly to the first stop. Step back while the pressure is released from the cooling system. When you are sure all the pressure has been released, press down on the cap, using a thick towel, and continue turning counterclockwise to remove it.

(Continued)

**WARNING**

- Even if the engine is not operating, do not remove the radiator cap or the drain plug while the engine and radiator are hot. Hot coolant and steam may still blow out under pressure, causing serious injury.

(Continued)

The electric motor (cooling fan) is controlled by engine coolant temperature, refrigerant pressure and vehicle speed. It may sometimes operate even when the engine is not running. Use extreme caution when working near the blades of the cooling fan so that you are not injured by a rotating fan blades. As the engine coolant temperature decreases, the electric motor will automatically shut off. This is a normal condition.
Check the condition and connections of all cooling system hoses and heater hoses. Replace any swollen or deteriorated hoses.

The coolant level should be filled between F and L marks on the side of the coolant reservoir when the engine is cool. If the coolant level is low, add enough distilled (deionized) water to provide protection against freezing and corrosion. Bring the level to F, but do not overfill. If frequent additions are required, have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**Recommended engine coolant**

- When adding coolant, use only deionized water or soft water for your vehicle and never mix hard water in the coolant filled at the factory. An improper coolant mixture can result in serious malfunction or engine damage.
- The engine in your vehicle has aluminum engine parts and must be protected by an ethylene-glycol with phosphate based coolant to prevent corrosion and freezing.
- DO NOT USE alcohol or methanol coolant or mix them with the specified coolant.
• Do not use a solution that contains more than 60% antifreeze or less than 35% antifreeze, which would reduce the effectiveness of the solution.

For mixture percentage, refer to the following table.

<table>
<thead>
<tr>
<th>Ambient temperature</th>
<th>Mixture percentage (volume)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Antifreeze</td>
</tr>
<tr>
<td>-15 °C (5 °F)</td>
<td>35</td>
</tr>
<tr>
<td>25 °C (-13 °F)</td>
<td>40</td>
</tr>
<tr>
<td>35 °C (-31 °F)</td>
<td>50</td>
</tr>
<tr>
<td>45 °C (-49 °F)</td>
<td>60</td>
</tr>
</tbody>
</table>

**WARNING**

Do not remove the radiator cap when the engine and radiator are hot. Scalding hot coolant and steam (Continued)
Changing the coolant
Have the coolant replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ CAUTION
Put a thick cloth around the radiator cap before refilling the coolant in order to prevent the coolant from overflowing into engine parts such as the alternator.

⚠️ WARNING
- Coolant
  - Do not use radiator coolant or antifreeze in the washer fluid reservoir.
BRAKE/CLUTCH FLUID (IF EQUIPPED)

Checking the brake/clutch fluid level

Check the fluid level in the reservoir periodically. The fluid level should be between MAX and MIN marks on the side of the reservoir.
Before removing the reservoir cap and adding brake/clutch fluid, clean the area around the reservoir cap thoroughly to prevent brake/clutch fluid contamination.
If the level is low, add fluid to the MAX level. The level will fall with accumulated mileage. This is a normal condition associated with the wear of the brake linings.

If the fluid level is excessively low, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Use only the specified brake fluid. (Refer to “Recommended lubricants and capacities” on page 9-11.)
Never mix different types of fluid.

⚠️ WARNING
- Loss of brake/clutch fluid
In the event the brake/clutch system requires frequent additions of fluid, have the system inspected by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ CAUTION
Do not allow brake/clutch fluid to contact the vehicle’s body paint, as paint damage will result. Brake/clutch fluid, which has been exposed to open air for an extended time should never be used as its quality cannot be guaranteed. It should be properly disposed. Don't put in the wrong kind of fluid. A few drops of mineral-based oil, such as engine oil, in your brake/clutch system can damage brake/clutch system parts.

(Continued)
Immediately flush them with a large quantity of fresh tap water. Have your eyes examined by a doctor as soon as possible.
WASHER FLUID

Checking the washer fluid level

The reservoir is translucent so that you can check the level with a quick visual inspection. Check the fluid level in the washer fluid reservoir and add fluid if necessary. Plain water may be used if washer fluid is not available. However, use washer solvent with antifreeze characteristics in cold climates to prevent freezing.

⚠️ WARNING

- **Coolant**
  - Do not use radiator coolant or antifreeze in the washer fluid reservoir.
  - Radiator coolant can severely obscure visibility when sprayed on the windshield and may cause loss of vehicle control or damage to paint and body trim.
  - Windshield washer fluid agents contain some amounts of alcohol and can be flammable under certain circumstances. Do not allow sparks or flame to contact the washer fluid or the washer fluid reservoir. Damage to the vehicle or occupants could occur.
  - Windshield washer fluid is poisonous to humans and animals. Do not drink and avoid contacting windshield washer fluid. Serious injury or death could occur.
PARKING BRAKE

Checking the parking brake

Check the stroke of the parking brake by counting the number of “clicks” heard while fully applying it from the released position. Also, the parking brake alone should securely hold the vehicle on a fairly steep grade. If the stroke is more or less than specified, have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Stroke: 6-8 “clicks” at a force of 20 kg (44 lbs, 196 N).
FUEL FILTER (FOR DIESEL)

Draining water from fuel filter
The fuel filter for diesel engine plays an important role of separating water from fuel and accumulating the water in its bottom. If water accumulates in the fuel filter, the warning light comes on when the ignition switch is in the ON position.

If this warning light illuminates, take your car to a professional workshop and have drain the water and check the system. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ CAUTION
If the water accumulated in the fuel filter is not drained at proper times, damages to the major parts such as the fuel system can be caused by water permeation in the fuel filter.

Fuel filter cartridge replacement

※ NOTICE
When replacing the fuel filter cartridge, use parts for replacement from a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
AIR CLEANER

Filter replacement

1. Loosen the air cleaner cover attaching clips and open the cover.

2. Wipe the inside of the air cleaner.

3. Replace the air cleaner filter.

4. Lock the cover with the cover attaching clips.

Replace the filter according to the Maintenance Schedule.

If the vehicle is operated in extremely dusty or sandy areas, replace the element more often than the usual recommended intervals. (Refer to “Maintenance under severe usage conditions” on page 8-17.)

CAUTION

- Do not drive with the air cleaner removed; this will result in excessive engine wear.
- When removing the air cleaner filter, be careful that dust or dirt does not enter the air intake, or damage may result.
- Use parts for replacement from a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
CLIMATE CONTROL AIR FILTER

Filter inspection
The climate control air filter should be replaced according to the maintenance schedule. If the vehicle is operated in severely air-polluted cities or on dusty rough roads for a long period, it should be inspected more frequently and replaced earlier. When you replace the climate control air filter, replace it performing the following procedure, and be careful to avoid damaging other components.

1. Open the glove box and pull the support strap (1).
2. With the glove box open, remove the stoppers on both sides.
3. Remove the climate control air filter case by pulling out both sides of the cover.
4. Replace the climate control air filter.
5. Reassemble in the reverse order of disassembly.

* NOTICE
When replacing the climate control air filter install it properly. Otherwise, the system may produce noise and the effectiveness of the filter may be reduced.
Contamination of either the windshield or the wiper blades with foreign matter can reduce the effectiveness of the windshield wipers. Common sources of contamination are insects, tree sap, and hot wax treatments used by some commercial car washes. If the blades are not wiping properly, clean both the window and the blades with a good cleaner or mild detergent, and rinse thoroughly with clean water.

⚠️ CAUTION

To prevent damage to the wiper blades, do not use gasoline, kerosene, paint thinner, or other solvents on or near them.

Blade replacement
When the wipers no longer clean adequately, the blades may be worn or cracked, and require replacement.

⚠️ CAUTION

To prevent damage to the wiper arms or other components, do not attempt to move the wipers manually.

⚠️ CAUTION

The use of a non-specified wiper blade could result in wiper malfunction and failure.

Front windshield wiper blade

Type A

1. Raise the wiper arm.
1. Raise the wiper and turn the wiper blade assembly to expose the plastic locking clip.

2. Lift up the wiper blade clip. Then pull down the blade assembly and remove it.

3. Install the new blade assembly in the reverse order of removal.

**CAUTION**

Do not allow the wiper arm to fall against the windshield, since it may chip or crack the windshield.
2. Compress the clip and slide the blade assembly downward.
3. Lift it off the arm.
4. Install the blade assembly in the reverse order of removal.

5. Return the wiper arm on the windshield.

**Rear window wiper blade (5 Door)**

1. Raise the wiper arm and pull out the wiper blade assembly.
2. Install the new blade assembly by inserting the center part into the slot in the wiper arm until it clicks into place.
3. Make sure the blade assembly is installed firmly by trying to pull it slightly.

To prevent damage to the wiper arms or other components, have the wiper blade replaced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
BATTERY

For best battery service

• Keep the battery securely mounted.
• Keep the battery top clean and dry.
• Keep the terminals and connections clean, tight, and coated with petroleum jelly or terminal grease.
• Rinse any spilled electrolyte from the battery immediately with a solution of water and baking soda.
• If the vehicle is not going to be used for an extended time, disconnect the battery cables.

* NOTICE

Basically equipped battery is maintenance free type. If your vehicle is equipped with the battery marked with LOWER and UPPER on the side, you can check the electrolyte level. The electrolyte level should be between LOWER and UPPER. If the electrolyte level is low, it needs to add distilled (demineralized) water (Never add sulfuric acid or other electrolyte). When refill, be careful not to splash the battery and adjacent components. And do not overfill the battery cells. It can cause corrosion on other parts. After then ensure that tighten the cell caps. Contact a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

WARNING

Battery dangers

(Continued)
If any electrolyte gets into your eyes, flush your eyes with clean water for at least 15 minutes and get immediate medical attention.
If electrolyte gets on your skin, thoroughly wash the contacted area. If you feel pain or burning sensation, get medical attention immediately.
Wear eye protection when charging or working near a battery. Always provide ventilation when working in an enclosed space.
An inappropriately disposed battery can be harmful to the environment and human health. Dispose the battery according to your local law(s) or regulation.

When lifting a plastic-cased battery, excessive pressure on the case may cause battery acid to leak, resulting in personal injury. Lift with a battery carrier or with your hands on opposite corners.
Never attempt to recharge the battery when the battery cables are connected.
The electrical ignition system works with high voltage. Never touch these components with the engine running or the ignition switched on.
Failure to follow the above warnings can result in serious bodily injury or death.

If you connect unauthorized electronic devices to the battery, the battery may be discharged. Never use unauthorized devices.
Make sure the battery cap is closed. If the battery cap is not closed securely, it can malfunction because the electric components are exposed to moisture.

Have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

When you don’t use the vehicle for a long time in the low temperature area, separate the battery and keep it indoors.
Always charge the battery fully to prevent the battery case damaged in low temperature area.
### Battery capacity label

**Example**

<table>
<thead>
<tr>
<th>Label</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CMF60L-BC1</td>
<td>The Kia model name of battery</td>
</tr>
<tr>
<td>12V</td>
<td>The nominal voltage</td>
</tr>
<tr>
<td>60Ah(20HR)</td>
<td>The nominal capacity (in Ampere hours)</td>
</tr>
<tr>
<td>92RC</td>
<td>The nominal reserve capacity (in min.)</td>
</tr>
<tr>
<td>550CCA (SAE)</td>
<td>The cold-test current in amperes by SAE</td>
</tr>
<tr>
<td>440A (EN)</td>
<td>The cold-test current in amperes by EN</td>
</tr>
</tbody>
</table>

* The actual battery label in the vehicle may differ from the illustration.
  1. CMF60L-BC1 : The Kia model name of battery
  2. 12V : The nominal voltage
  3. 60Ah(20HR) : The nominal capacity (in Ampere hours)
  4. 92RC : The nominal reserve capacity (in min.)
  5. 550CCA : The cold-test current in amperes by SAE
  6. 440A : The cold-test current in amperes by EN

### Battery recharging

Your vehicle has a maintenance-free, calcium-based battery.

- If the battery becomes discharged in a short time (because, for example, the headlights or interior lights were left on while the vehicle was not in use), recharge it by slow charging (trickle) for 10 hours.
- If the battery gradually discharges because of high electric load while the vehicle is being used, recharge it at 20~30A for two hours.

#### WARNING

**Recharging battery**

When recharging the battery, observe the following precautions:

- The battery must be removed from the vehicle and placed in an area with good ventilation.
- Do not allow cigarettes, sparks, or flame near the battery.

(Continued)

#### WARNING

- Watch the battery during charging, and stop or reduce the charging rate if the battery cells begin gassing (boiling) violently or if the temperature of the electrolyte of any cell exceeds 49°C (120°F).
- Wear eye protection when checking the battery during charging.
- Disconnect the battery charger in the following order.
  1. Turn off the battery charger main switch.
  2. Unhook the negative clamp from the negative battery terminal.
  3. Unhook the positive clamp from the positive battery terminal.

(Continued)

#### WARNING

- Before performing maintenance or recharging the battery, turn off all accessories and stop the engine.
- The negative battery cable must be removed first and installed last when the battery is disconnected.

(Continued)
(Continued)

- Have the system serviced by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ CAUTION

- Keep the battery away from water or any liquid.
- When replacing the AGM battery, use parts for replacement from a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

Reset items
Items should be reset after the battery has been discharged or the battery has been disconnected.
- Auto up/down window (see Chapter 5, Features of your vehicle)
- Sunroof (see Chapter 5, Features of your vehicle)
- Trip computer (see Chapter 5, Features of your vehicle)
- Climate control system (see Chapter 5, Features of your vehicle)
- Clock (See Chapter 5, Features of your vehicle)
- Audio (see Chapter 6, Audio system)
TIRES AND WHEELS

Tire care
For proper maintenance, safety, and maximum fuel economy, you must always maintain recommended tire inflation pressures and stay within the load limits and weight distribution recommended for your vehicle.

Recommended cold tire inflation pressures
All tire pressures (including the spare) should be checked when the tires are cold. “Cold Tires” means the vehicle has not been driven for at least three hours or driven less than 1.6 km (one mile). Recommended pressures must be maintained for the best ride, top vehicle handling, and minimum tire wear. For recommended inflation pressure, refer to “Tire and wheels” on page 9-08.

All specifications (sizes and pressures) can be found on a label attached to the vehicle.

⚠️ WARNING
- **Tire underinflation**
  Severe underinflation (70 kPa (10 psi) or more) can lead to severe heat build-up, causing blowouts, tread separation and other tire failures that can result in the loss of vehicle control leading to severe injury or death. This risk is much higher on hot days and when driving for long periods at high speeds.

⚠️ CAUTION
- Underinflation also results in excessive wear, poor handling and reduced fuel economy. Wheel deformation also is possible. Keep your tire pressures at the proper levels. If a tire frequently needs refilling, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
- Overinflation produces a harsh ride, excessive wear at the center of the tire tread, and a greater possibility of damage from road hazards.

(Continued)
CAUTION
• Warm tires normally exceed recommended cold tire pressures by 28 to 41 kPa (4 to 6 psi). Do not release air from warm tires to adjust the pressure or the tires will be underinflated.
• Be sure to reinstall the tire inflation valve caps. Without the valve cap, dirt or moisture could get into the valve core and cause air leakage. If a valve cap is missing, install a new one as soon as possible.

WARNING
Tire Inflation
Overinflation or underinflation can reduce tire life, adversely affect vehicle handling, and lead to sudden tire failure. This could result in loss of vehicle control and potential injury.

CAUTION
• Tire pressure
Always observe the following:
• Check tire pressure when the tires are cold. (After vehicle has been parked for at least three hours or hasn't been driven more than 1.6 km (one mile) since startup.)
• Check the pressure of your spare tire each time you check the pressure of other tires.
• Never overload your vehicle. Be careful not to overload a vehicle luggage rack if your vehicle is equipped with one.
• Worn, old tires can cause accidents. If your tread is badly worn, or if your tires have been damaged, replace them.

How to check
Use a good quality gauge to check tire pressure. You can not tell if your tires are properly inflated simply by looking at them. Radial tires may look properly inflated even when they're underinflated.
Check the tire's inflation pressure when the tires are cold. - "Cold" means your vehicle has been sitting for at least three hours or driven no more than 1.6 km (1 mile).
Remove the valve cap from the tire valve stem. Press the tire gauge firmly onto the valve to get a pressure measurement. If the cold tire inflation pressure matches the recommended pressure on the tire and loading information label, no further adjustment is necessary. If the pressure is low, add air until you reach the recommended amount.
If you overfill the tire, release air by pushing on the metal stem in the center of the tire valve. Recheck the tire pressure with the tire gauge. Be sure to put the valve caps back on the valve stems. They help prevent leaks by keeping out dirt and moisture.

Checking tire inflation pressure
Check your tires once a month or more. Also, check the tire pressure of the spare tire.
WARNING

- Inspect your tires frequently for proper inflation as well as wear and damage. Always use a tire pressure gauge.
- Tires with too much or too little pressure wear unevenly causing poor handling, loss of vehicle control, and sudden tire failure leading to accidents, injuries, and even death. The recommended cold tire pressure for your vehicle can be found in this manual and on the tire label located on the driver’s side center pillar.
- Worn tires can cause accidents. Replace tires that are worn, show uneven wear, or are damaged.
- Remember to check the pressure of your spare tire. Kia recommends that you check the spare every time you check the pressure of the other tires on your vehicle.

Tire rotation
To equalize tread wear, it is recommended that the tires be rotated every 15,000 km (10,000 miles) or sooner if irregular wear develops.

During rotation, check the tires for correct balance. When rotating tires, check for uneven wear and damage. Abnormal wear is usually caused by incorrect tire pressure, improper wheel alignment, out-of-balance wheels, severe braking or severe cornering. Look for bumps or bulges in the tread or side of tire. Replace the tire if you find either of these conditions. Replace the tire if fabric or cord is visible. After rotation, be sure to bring the front and rear tire pressures to specification and check lug nut tightness. Refer to “Tire and wheels” on page 9-08.
Disc brake pads should be inspected for wear whenever tires are rotated.

**NOTICE**

Rotate radial tires that have an directional tread pattern only from front to rear and not from right to left.

**WARNING**

- Do not use the compact spare tire (if equipped) for tire rotation.
- Do not mix bias ply and radial ply tires under any circumstances. This may cause unusual handling characteristics that could result in death, severe injury, or property damage.

Wheel alignment and tire balance

The wheels on your vehicle were aligned and balanced carefully at the factory to give you the longest tire life and best overall performance.

In most cases, you will not need to have your wheels aligned again. However, if you notice unusual tire wear or your vehicle pulling one way or the other, the alignment may need to be reset.

If you notice your vehicle vibrating when driving on a smooth road, your wheels may need to be rebalanced.

**CAUTION**

Improper wheel weights can damage your vehicle’s aluminum wheels. Use only approved wheel weights.

If the tire is worn evenly, a tread wear indicator will appear as a solid band across the tread. This shows there is less than 1.6 mm (1/16 in.) of tread left on the tire. Replace the tire when this happens. Do not wait for the band to appear across the entire tread before replacing the tire.
**NOTICE**

We recommend that when replacing tires, use the same originally supplied with the vehicles. If not, that affects driving performance.

---

**CAUTION**

When replacing the tires, recheck and tighten the wheel nuts after driving about 50 km (31 miles). If the steering wheel shakes or the vehicle vibrates while driving, the tire is out of balance. Align the tire balance. If the problem is not solved, contact a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

---

**WARNING**

- Replacing tires

To reduce the chance of serious or fatal injuries from an accident

(Continued)

- caused by tire failure or loss of vehicle control:
  - Replace tires that are worn, show uneven wear, or are damaged. Worn tires can cause loss of braking effectiveness, steering control, and traction.
  - Do not drive your vehicle with too little or too much pressure in your tires. This can lead to uneven wear and tire failure.
  - When replacing tires, never mix radial and bias-ply tires on the same car. You must replace all tires (including the spare) if moving from radial to bias-ply tires.
  - Using tires and wheels other than the recommended sizes could cause unusual handling characteristics and poor vehicle control, resulting in a serious accident.
  - Wheels that do not meet Kia’s specifications may fit poorly and result in damage to the vehicle or unusual handling and poor vehicle control.

(Continued)

- The ABS works by comparing the speed of the wheels. The tire size affects wheel speed. When replacing tires, all 4 tires must use the same size originally supplied with the vehicle. Using tires of a different size can cause the ABS (Anti-lock Brake System) and ESC (Electronic Stability Control) to work irregularly.

---

**Compact spare tire replacement (if equipped)**

A compact spare tire has a shorter tread life than a regular size tire. Replace it when you can see the tread wear indicator bars on the tire. The replacement compact spare tire should be the same size and design tire as the one provided with your new vehicle and should be mounted on the same compact spare tire wheel. The compact spare tire is not designed to be mounted on a regular size wheel, and the compact spare tire wheel is not designed for mounting a regular size tire.
Wheel replacement
When replacing the metal wheels for any reason, make sure the new wheels are equivalent to the original factory units in diameter, rim width and offset.

⚠️ WARNING
A wheel that is not the correct size may adversely affect wheel and bearing life, braking and stopping abilities, handling characteristics, ground clearance, body-to-tire clearance, snow chain clearance, speedometer and odometer calibration, headlight aim and bumper height.

Tire traction
Tire traction can be reduced if you drive on worn tires, tires that are improperly inflated or on slippery road surfaces. Tires should be replaced when tread wear indicators appear. Slow down whenever there is rain, snow or ice on the road to reduce the possibility of losing control of the vehicle.

Tire maintenance
In addition to proper inflation, correct wheel alignment helps to decrease tire wear. If you find a tire is worn unevenly, have a professional workshop check the wheel alignment. Kia recommends to visit an authorized Kia dealer/service partner.
When you have new tires installed, make sure they are balanced. This will increase vehicle ride comfort and tire life. Additionally, a tire should always be rebalanced if it is removed from the wheel.

Tire sidewall labeling
This information identifies and describes the fundamental characteristics of the tire and also provides the tire identification number (TIN) for safety standard certification. The TIN can be used to identify the tire in case of a recall.

1. Manufacturer or brand name
Manufacturer or Brand name is shown.
2. Tire size designation
A tire’s sidewall is marked with a tire size designation. You will need this information when selecting replacement tires for your vehicle. The following explains what the letters and numbers in the tire size designation mean.
Example tire size designation:
(The numbers are provided as an example only; your tire size designator could vary depending on your vehicle.)
P205/55R16 94H
P - Applicable vehicle type (tires marked with the prefix “P” are intended for use on passenger cars or light trucks; however, not all tires have this marking).
205 - Tire width in millimeters.
55 - Aspect ratio. The tire’s section height as a percentage of its width.
R - Tire construction code (Radial).
16 - Rim diameter in inches.
94 - Load Index, a numerical code associated with the maximum load the tire can carry.
H - Speed Rating Symbol. See the speed rating chart in this section for additional information.

Wheel size designation
Wheels are also marked with important information that you need if you ever have to replace one. The following explains what the letters and numbers in the wheel size designation mean.
Example wheel size designation:
6.5JX16
6.5 - Rim width in inches.
J - Rim contour designation.
16 - Rim diameter in inches.

Tire speed ratings
The chart below lists many of the different speed ratings currently being used for passenger car tires. The speed rating is part of the tire size designation on the sidewall of the tire. This symbol corresponds to that tire’s designed maximum safe operating speed.

<table>
<thead>
<tr>
<th>Speed Rating Symbol</th>
<th>Maximum Speed</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>180 km/h (112 mph)</td>
</tr>
<tr>
<td>T</td>
<td>190 km/h (118 mph)</td>
</tr>
<tr>
<td>H</td>
<td>210 km/h (130 mph)</td>
</tr>
<tr>
<td>V</td>
<td>240 km/h (149 mph)</td>
</tr>
</tbody>
</table>

*1 W speed rating is sub-category of the Z speed rating.

3. Checking tire life (TIN: Tire Identification Number)
Any tires that are over 6 years old, based on the manufacturing date, (including the spare tire) should be replaced by new ones. You can find the manufacturing date on the tire sidewall (possibly on the inside of the wheel), displaying the DOT Code. The DOT Code is a series of numbers on a tire consisting of numbers and English letters. The manufacturing date is designated by the last four digits (characters) of the DOT code.

DOT : XXXX XXXX 0000
The front part of the DOT means a plant code number, tire size and tread pattern and the last four numbers indicate week and year manufactured. For example:
DOT XXXX XXXX 1617 represents that the tire was produced in the 16th week of 2017.

5. **Maximum permissible inflation pressure**
   This number is the greatest amount of air pressure that should be put in the tire. Do not exceed the maximum permissible inflation pressure. Refer to the “Tire and Loading Information label” on page 9-17 for recommended inflation pressure.

6. **Maximum load rating**
   This number indicates the maximum load in kilograms and pounds that can be carried by the tire. When replacing the tires on the vehicle, always use a tire that has the same load rating as the factory installed tire.

7. **Uniform tire quality grading**
   Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width.
   For example:
   TREADWEAR 200
   TRACTION AA
   TEMPERATURE A

Tread wear
The tread wear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one-and-a-half times (1½) as well on the government course as a tire graded 100.

The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

These grades are molded on the sidewalls of passenger vehicle tires. The tires available as standard or optional equipment on your vehicle may vary with respect to grade.

Traction – AA, A, B & C
The traction grades, from highest to lowest, are AA, A, B and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

4. **Tire ply composition and material**
   The number of layers or plies of rubber-coated fabric are in the tire. Tire manufacturers also must indicate the materials in the tire, which include steel, nylon, polyester, and others. The letter "R" means radial ply construction; the letter "D" means diagonal or bias ply construction; and the letter "B" means belted-bias ply construction.

**WARNING**

- **Tire age**
  Tires degrade over time, even when they are not being used. Regardless of the remaining tread, we recommend that tires be replaced after approximately six (6) years of normal service. Heat caused by hot climates or frequent high loading conditions can accelerate the aging process. Failure to follow this warning can result in sudden tire failure, which could lead to a loss of control and an accident involving serious injury or death.
Temperature - A, B & C
The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

WARNING
Tire temperature
The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat build-up and possible sudden tire failure. This can cause loss of vehicle control and serious injury or death.

Low aspect ratio tire (if equipped)
Low aspect ratio tires, whose aspect ratio is lower than 50, are provided for sporty looks. Because the low aspect ratio tires are optimized for handling and braking, it may be more uncomfortable to ride in and there is more noise compare with normal tires.

WARNING
The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

CAUTION
Because the sidewall of the low aspect ratio tire is shorter than the

normal, the wheel and tire of the low aspect ratio tire is easier to be damaged. So, follow the instructions below.
- When driving on a rough road or off road, drive cautiously because tires and wheels may be damaged. And after driving, inspect tires and wheels.
- When passing over a pothole, speed bump, manhole or curb stone, drive slowly so that the tires and wheels are not damaged.
- If the tire is impacted, inspect the tire condition or contact a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
- To prevent damage to the tire, inspect the tire condition and pressure every 3,000 km.
CAUTION

• It is not easy to recognize the tire damage with your own eyes. But if there is the slightest hint of tire damage, even though you cannot see the tire damage with your own eyes, have the tire checked or replaced because the tire damage may cause air leakage from the tire.

• If the tire is damaged by driving on a rough road, off road, pothole, manhole, or curb stone, it will not be covered by the warranty.

• You can find out the tire information on the tire sidewall.
A vehicle’s electrical system is protected from electrical overload damage by fuses.

This vehicle has 2 fuse panels, one located in the driver’s side panel bolster, others in the engine compartment near the battery. If any of your vehicle’s lights, accessories, or controls do not work, check the appropriate circuit fuse. If a fuse has blown, the element inside the fuse will be melted. If the electrical system does not work, first check the driver’s side fuse panel.

Always replace a blown fuse with one of the same rating. Before replacing a blown fuse, move to a safe place, turn off the engine and all electric devices, and disconnect the negative battery cable.
If the replacement fuse blows, this indicates an electrical problem. Avoid using
the system involved and immediately consult a professional workshop. Kia
recommends to consult an authorized Kia dealer/service partner.

Four kinds of fuses are used: blade type for lower amperage rating, cartridge
type, battery fuse terminal and multi fuse type for higher amperage ratings.

⚠️ WARNING

- **Fuse replacement**
  - Never replace a fuse with anything but another fuse of the same rating.
  - A higher capacity fuse could cause damage and possibly a fire.
  - Never install a wire or aluminum foil instead of the proper fuse even as a temporary repair. It may cause extensive wiring damage and a possible fire.
  - Do not arbitrarily modify or add-on electric wiring of the vehicle.

⚠️ CAUTION

Do not use a screwdriver or any other metal object to remove fuses because it may cause a short circuit and damage the system.

⚠️ NOTICE

The actual fuse/relay panel label may differ from equipped items.

⚠️ CAUTION

- When replacing a blown fuse or relay with a new one, make sure the new fuse or relay fits tightly into the clips. The incomplete fastening fuse or relay may cause the vehicle wiring and electric systems damage and a possible fire.

(Continued)

• Do not remove fuses, relays and terminals fastened with bolts or nuts. The fuses, relays and terminals may be fastened incompletely, and it may cause a possible fire. If fuses, relays and terminals fastened with bolts or nuts are blown, consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.

• Do not input any other objects except fuses or relays into fuse/relay terminals such as a driver or wiring. It may cause contact failure and system malfunction.

• Do not plug in screwdrivers or aftermarket wiring into the terminal originally designed for fuse and relays only. The electrical system and wiring of the vehicle interior may be damaged or burned due to contact failure.
Inner panel fuse replacement

1. Turn the ignition switch and all other switches off.
2. Open the fuse panel cover.
3. Pull the suspected fuse straight out. Use the removal tool provided in the main fuse box in the engine compartment.
4. Check the removed fuse; replace it if it is blown.
5. Push in a new fuse of the same rating, and make sure it fits tightly in the clips.

If it fits loosely, consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.

If you do not have a spare, use a fuse of the same rating from a circuit you may not need for operating the vehicle, such as the cigarette lighter fuse.

If the headlights or other electrical components do not work and the fuses are OK, check the fuse panel in the engine compartment. If a fuse is blown, it must be replaced.

Fuse switch

Always, put the fuse switch at the ON position.
If you move the switch to the OFF position, some items such as audio and digital clock must be reset and transmitter (or smart key) may not work properly.

⚠️ CAUTION

- Always place the fuse switch in the ON position while driving the vehicle.

(Continued)
(Continued)

- Do not move the transportation fuse switch repeatedly. The fuse switch may be worn out.

Engine compartment fuse replacement

1. Turn the ignition switch and all other switches off.

2. Remove the fuse panel cover by pressing the tab and pulling the cover up. When the blade type fuse is disconnected, remove it by using the clip designed for changing fuses located in the engine room fuse box. Upon removal, securely insert reserve fuse of equal quantity.

3. Check the removed fuse; replace it if it is blown. To remove or insert the fuse, use the fuse puller in the engine compartment fuse panel.

4. Push in a new fuse of the same rating, and make sure it fits tightly in the clips. If it fits loosely, consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.

**CAUTION**

After checking the fuse panel in the engine compartment, securely install the fuse panel cover. If not, electrical failures may occur from water contact.

**Multi fuse**

If the multi fuse is blown, it must be removed as follows:

1. Disconnect the negative battery cable.

2. Remove the nuts shown in the picture above.

3. Replace the fuse with a new one of the same rating.

4. Reinstall in the reverse order of removal.
**NOTICE**

If the multi fuse is blown, consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.
Inside the fuse/relay panel covers, you can find the fuse/relay label describing fuse/relay name and capacity.

**NOTICE**

Not all fuse panel descriptions in this manual may be applicable to your vehicle. It is accurate at the time of printing. When you inspect the fuse panel in your vehicle, refer to the fuse panel label.

LIGHT BULBS

⚠️ WARNING

Working on the lights
Prior to working on the light, firmly apply the parking brake, ensure that the ignition switch is turned to the LOCK position and turn off the lights to avoid sudden movement of the vehicle and burning your fingers or receiving an electric shock.

⚠️ CAUTION

Use only the bulbs of the specified wattage.

⚠️ CAUTION

The headlight aiming adjustment may be necessary after the headlight assembly is reinstalled. If you are unsure how to replace or aim the headlight, consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner.

⚠️ CAUTION

• If you don’t have necessary tools, the correct bulbs and the expertise, consult a professional workshop. Kia recommends to consult an authorized Kia dealer/service partner. In many cases, it is difficult to replace vehicle light bulbs because other parts of the vehicle must be removed before you can get to the bulb. This is especially true if you have to remove the headlight assembly to get to the bulb(s).
  Removing/installing the headlight assembly can result in damage to the vehicle.

• Do not install additional bulb or LED. If you install that, the lamp may not be operated properly and fuse box or electric wiring system may have problem.
**NOTICE**

After driving in heavy rain or washing, headlamp and taillamp lenses could appear frosty. This condition is caused by the temperature difference between the lamp inside and outside. This is similar to the condensation on your windows inside your vehicle during the rain and doesn't indicate a problem with your vehicle. If the water leaks into the lamp bulb circuitry, have the vehicle checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**Headlamp, Front position lamp, Front turn signal lamp, Front fog lamp bulb replacement**

1. Headlamp (High) / Position lamp (if equipped)
2. Headlamp (Low)
3. Front turn signal lamp
4. Front fog lamp (if equipped)
5. Day time running lamp / Position lamp (LED type) (if equipped)

**Headlamp bulb**
**WARNING**

- **Halogen bulbs**
  - Halogen bulbs contain pressurized gas that will produce flying pieces of glass if broken.
  - Always handle them carefully, and avoid scratches and abrasions. If the bulbs are lit, avoid contact with liquids. Never touch the glass with bare hands. Residual oil may cause the bulb to overheat and burst when lit. A bulb should be operated only when installed in a headlight.
  - If a bulb becomes damaged or cracked, replace it immediately and carefully dispose of it.
  - Wear eye protection when changing a bulb. Allow the bulb to cool down before handling it.

1. Open the hood.
2. Disconnect the negative battery cable.
3. Loosen the retaining bolts and remove the headlamp assembly from the body of the vehicle. If you can reach to the bulb without removing the headlamp assembly, you don’t need to do step 3.
4. Disconnect the power connector(s) from the back of the headlamp assembly.
5. Remove the headlamp bulb cover by turning it counterclockwise.
6. Disconnect the headlamp bulb socket-connector.
7. Unsnap the headlamp bulb retaining wire by depressing the end and pushing it upward.
8. Remove the bulb from the headlamp assembly.
9. Install a new headlamp bulb and snap the headlamp bulb retaining wire into position by aligning the wire with the groove on the bulb.
10. Connect the headlamp bulb socket-connector.
11. Install the headlamp bulb cover by turning it clockwise.

**Headlight (Low, HID type), Position light/DRL (LED type)**

If the light does not operate, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**WARNING**

- **HID Headlight low beam (if equipped)**
  Do not attempt to replace or inspect the low beam (XENON bulb) due to electric shock danger. If the low beam (XENON bulb) is not working, have your vehicle checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**NOTICE**

HID lamps have superior performance vs. halogen bulbs. HID lamps are estimated by the manufacturer to last twice as long or longer than halogen bulbs depending on their frequency of use. They will probably require replacement at some point in the life of the vehicle.

Cycling the headlamps on and off more than typical use will shorten HID lamps life. HID lamps do not fail in the same manner as halogen incandescent lamps.

If a headlamp goes out after a period of operation but will immediately relight when the headlamp switch is cycled it is likely the HID lamp needs to be replaced. HID lighting components are more complex than conventional halogen bulbs thus have higher replacement cost.
Position lamp (if equipped)

5. Remove the socket and bulb by pulling it out.

6. Install a new bulb into the socket and insert the socket.
7. Reinstall the lamp assembly to the body of the vehicle.

Turn signal lamp

Follow steps 1 to 4 from previous page.

Follow steps 1 to 4 from previous page.
5. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.

6. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket. Pull the bulb out of the socket.

7. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.

8. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly. Push the socket into the assembly and turn the socket clockwise.

9. Reinstall the lamp assembly to the body of the vehicle.

3. Disconnect the power connector from the socket.

4. Remove the bulb-socket from the housing by turning the socket counterclockwise until the tabs on the socket align with the slots on the housing.

5. Install the new bulb-socket into the housing by aligning the tabs on the socket with the slots in the housing. Push the socket into the housing and turn the socket clockwise.

6. Connect the power connector to the socket.

1. Disconnect the negative battery cable.

2. Remove the screws under the front bumper.
**Front fog light aiming**

With the front fog lamps and battery normal condition, aim the front fog lamps. To aim the front fog lamp up or down, turn the driver clockwise or counterclockwise.

The front fog lamp can be aimed as the same manner of the head lamps aiming.
Aiming point

<Ground Height>

<Distance between lamps>

H1 : Height between the head lamp bulb center and ground (Low beam)
H2 : Height between the head lamp bulb center and ground (High beam)
H3 : Height between the fog lamp bulb center and ground
W1 : Distance between the two head lamp bulbs centers (Low beam)
W2 : Distance between the two head lamp bulbs centers (High beam)
W3 : Distance between the two fog lamp bulbs centers

Head lamp low beam (LHD)

1. Turn the low beam on without driver aboard.
2. The cut-off line should be projected in the cut-off line shown in the picture.
3. When aiming the low beam, vertical aiming should be adjusted after adjusting the horizontal aiming.
4. If head lamp leveling device is equipped, adjust the head lamp leveling device switch with 0 positions.
Head lamp low beam (RHD)

1. Turn the low beam on without driver aboard.
2. The cut-off line should be projected in the cut-off line shown in the picture.
3. When aiming the low beam, vertical aiming should be adjusted after adjusting the horizontal aiming.
4. If head lamp leveling device is equipped, adjust the head lamp leveling device switch with 0 positions.
Front fog light

1. Turn the front fog lamp on without the driver aboard.
2. The cut-off line should be projected in the allowable range (shaded region).
If the light bulb does not operate, have your vehicle checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
1. Tail stop lamp or stop lamp
2. Tail lamp
3. Back-up lamp
4. Rear turn signal lamp
5. Rear fog lamp (if equipped)
6. Tail stop lamp or stop lamp (LED)

If the light (LED) bulb does not operate, have your vehicle checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

**Outside lamp**

- **4 Door, 2 Door**
  1. Turn off the engine.
  2. Open the trunk lid.
  3. Remove the service cover by pulling out the service cover.

- **5 Door**
  1. Turn off the engine.
  2. Open the tailgate.
  3. Loosen the light assembly retaining screws with a cross-tip screwdriver.
  4. Remove the rear combination light assembly from the body of the vehicle.
1. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.

2. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket. Pull the bulb out of the socket.

3. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.

4. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly. Push the socket into the assembly and turn the socket clockwise.

5. Install the service cover by putting it into the service hole.

Stop and tail light (LED type)
If the light bulb does not operate, have your vehicle checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.
Inside lamp

- 4 Door, 2 Door

1. Open the trunk.
2. Loosen the retaining screw of the trunk lid cover and then remove the cover.

1. Take the lamp assembly out.
2. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.
3. Remove the bulb by pulling it out.
4. Insert a new bulb by inserting it into the socket.
5. Install the light assembly to the trunk.
6. Reinstall the nuts and connector and then the trunk lid cover by pushing in the screw.

1. Disconnect the connector and then remove the nuts by turning the nuts counterclockwise.

- Type A

- Type B

- 4 Door, 2 Door

Back up lamp, Rear fog lamp
1. Turn off the engine.
2. Open the tailgate.
3. Remove the service cover.

4. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.

5. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket. Pull the bulb out of the socket.

6. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.

7. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly. Push the socket into the assembly and turn the socket clockwise.

8. Install the service cover by putting it into the service hole.

Stop/tail light (LED type)
If the light bulb does not operate, have your vehicle checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

- 4 Door
  1. Open the trunk.
2. Remove the socket by turning it counterclockwise until the tabs on the socket align with the slots.

3. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket. Pull the bulb out of the socket.

4. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.

5. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly. Push the socket into the assembly and turn the socket clockwise.

3. Disconnect the electrical connector.

4. Loosen the retaining nuts and remove the spoiler.

1. Open the tailgate.

2. Gently remove the center cover of the rear tailgate trim.
5. Remove the high mounted stop lamp assembly (A) after loosening the nuts and washer nozzle (B).

6. Reinstall a new lamp assembly in the reverse order of removal.

- 2 Door
If the light bulb does not operate, have your vehicle checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner. A skilled technician should check or repair the high mounted stop light, for it may affect the performance of the curtain airbags or damage related interior parts of the vehicle.
Interior lamp bulb replacement

1. Using a flat-blade screwdriver, gently pry the lens from the interior light housing.
2. Remove the bulb by pulling it straight out.
3. Install a new bulb in the socket.

4. Align the lens tabs with the interior lamp housing notches and snap the lens into place.

⚠️ CAUTION

Use care not to dirty or damage lens, lens tab, and plastic housings.

⚠️ WARNING

Prior to working on the Interior Lamps, ensure that the “OFF” button is depressed to avoid burning your fingers or receiving an electric shock.
APPEARANCE CARE

Exterior care

Exterior general caution
It is very important to follow the label directions when using any chemical cleaner or polish. Read all warning and caution statements that appear on the label.

Finish maintenance

Washing
To help protect your vehicle’s finish from rust and deterioration, wash it thoroughly and frequently at least once a month with lukewarm or cold water. If you use your vehicle for off-road driving, you should wash it after each off-road trip. Pay special attention to the removal of any accumulation of salt, dirt, mud, and other foreign materials. Make sure the drain holes in the lower edges of the doors and rocker panels are kept clear and clean. Insects, tar, tree sap, bird droppings, industrial pollution and similar deposits can damage your vehicle’s finish if not removed immediately. Even prompt washing with plain water may not completely remove all these deposits. A mild soap, safe for use on painted surfaces, may be used.

After washing, rinse the vehicle thoroughly with lukewarm or cold water. Do not allow soap to dry on the finish.

⚠️ CAUTION
- Do not use strong soap, chemical detergents or hot water, and do not wash the vehicle in direct sunlight or when the body of the vehicle is warm.
- Be careful when washing the side windows of your vehicle. Especially, with high-pressure water, water may leak through the windows and wet the interior.
- To prevent damage to the plastic parts and lamps, do not clean with chemical solvents or strong detergents.

⚠️ WARNING
- Wet brakes
After washing the vehicle, test the brakes while driving slowly to see if they have been affected by water. If...
Always wash and dry the vehicle before waxing. Use a good quality liquid or paste wax, and follow the manufacturer’s instructions. Wax all metal trim to protect it and to maintain its luster. Removing oil, tar, and similar materials with a spot remover will usually strip the wax from the finish. Be sure to re-wax these areas even if the rest of the vehicle does not yet need waxing.

**CAUTION**

- Water washing in the engine compartment including high pressure water washing may cause the failure of electrical circuits located in the engine compartment.
- Never allow water or other liquids to come in contact with electrical/electronic components inside the vehicle as this may damage them.

Waxing

Wax the vehicle when water will no longer bead on the paint.

**Finish damage repair**

Deep scratches or stone chips in the painted surface must be repaired promptly. Exposed metal will quickly rust and may develop into a major repair expense.

**NOTICE**

If your vehicle is damaged and requires any metal repair or replacement, be sure the body shop applies anti-corrosion materials to the parts repaired or replaced.

**Bright-metal maintenance**

- To remove road tar and insects, use a tar remover, not a scraper or other sharp object.
- To protect the surfaces of bright-metal parts from corrosion, apply a coating of wax or chrome preservative and rub to a high luster.
- During winter weather or in coastal areas, cover the bright metal parts with a heavier coating of wax or preservative. If necessary, coat the parts with non-corrosive petroleum jelly or other protective compound.
Underbody maintenance

Corrosive materials used for ice and snow removal and dust control may collect on the underbody. If these materials are not removed, accelerated rusting can occur on underbody parts such as the fuel lines, frame, floor pan and exhaust system, even though they have been treated with rust protection. Thoroughly flush the vehicle underbody and wheel openings with lukewarm or cold water once a month, after off-road driving and at the end of each winter. Pay special attention to these areas because it is difficult to see all the mud and dirt. It will do more harm than good to wet down the road grime without removing it. The lower edges of the doors, rocker panels, and frame members have drain holes that should not clog with dirt; trapped water in these areas can cause rusting.

WARNING

After washing the vehicle, test the brakes while driving slowly to see if they have been affected by water. If braking performance is impaired, dry the brakes by applying them lightly.

Aluminum wheel maintenance

The aluminum wheels are coated with a clear protective finish.

• Do not use any abrasive cleaner, polishing compound, solvent, or wire brushes on aluminum wheels. They may scratch or damage the finish.

• Clean the wheel when it has cooled.

• Use only a mild soap or neutral detergent, and rinse thoroughly with water. Also, be sure to clean the wheels after driving on salted roads. This helps prevent corrosion.

• Avoid washing the wheels with high-speed car wash brushes.

• Do not use any alkaline or acid detergent. It may damage and corrode the aluminum wheels coated with a clear protective finish.

Corrosion protection

Protecting your vehicle from corrosion

By using the most advanced design and construction practices to combat corrosion, we produce vehicles of the highest quality. However, this is only part of the job. To achieve the long-term corrosion resistance your vehicle can deliver, the owner’s cooperation and assistance is also required.

Common causes of corrosion

The most common causes of corrosion on your vehicle are:

• Road salt, dirt and moisture that is allowed to accumulate underneath the vehicle.

• Removal of paint or protective coatings by stones, gravel, abrasion or minor scrapes and dents which leave unprotected metal exposed to corrosion.

High-corrosion areas

If you live in an area where your vehicle is regularly exposed to corrosive materials, corrosion protection is particularly important. Some of the common causes of accelerated corrosion are road salts, dust control chemicals, ocean air and industrial pollution.
Moisture breeds corrosion
Moisture creates the conditions in which corrosion is most likely to occur. For example, corrosion is accelerated by high humidity, particularly when temperatures are just above freezing. In such conditions, the corrosive material is kept in contact with the vehicle’s surface by moisture that evaporate slowly.
Mud is particularly corrosive because it dries slowly and holds moisture in contact with the vehicle. Although the mud appears to be dry, it can still retain moisture and promote corrosion. High temperatures can also accelerate corrosion of parts that are not properly ventilated so the moisture can be dispersed.
For all these reasons, it is particularly important to keep your vehicle clean and free of mud or accumulations of other materials. This applies not only to the visible surfaces but particularly to the underside of the vehicle.

To help prevent corrosion
You can help prevent corrosion from getting started by observing the following:

Keep your vehicle clean
The best way to prevent corrosion is to keep your vehicle clean and free of corrosive materials. Attention to the underside of the vehicle is particularly important.
• If you live in a high-corrosion area — where road salts are used, near the ocean, areas with industrial pollution, acid rain, etc.—, you should take extra care to prevent corrosion. In winter, hose off the underside of your vehicle at least once a month and be sure to clean the underside thoroughly when winter is over.
• When cleaning underneath the vehicle, give particular attention to the components under the fenders and other areas that are hidden from view. Do a thorough job; just dampening the accumulated mud rather than washing it away will accelerate corrosion rather than prevent it. Water under high pressure and steam are particularly effective in removing accumulated mud and corrosive materials.

• When cleaning lower door panels, rocker panels and frame members, be sure that drain holes are kept open so that moisture can escape and not be trapped inside to accelerate corrosion.

Keep your garage dry
Don’t park your vehicle in a damp, poorly ventilated garage. This creates a favorable environment for corrosion. This is particularly true if you wash your vehicle in the garage or drive it into the garage when it is still wet or covered with snow, ice or mud. Even a heated garage can contribute to corrosion unless it is well ventilated so moisture is dispersed.

Keep paint and trim in good condition
Scratches or chips in the finish should be covered with “touch-up” paint as soon as possible to reduce the possibility of corrosion. If bare metal is showing through, the attention of a qualified body and paint shop is recommended. Bird droppings: Bird droppings are highly corrosive and may damage painted surfaces in just a few hours. Always remove bird droppings as soon as possible.
Don’t neglect the interior
Moisture can collect under the floor mats and carpeting and cause corrosion. Check under the mats periodically to be sure the carpeting is dry. Use particular care if you carry fertilizers, cleaning materials or chemicals in the vehicle.

These should be carried only in proper containers and any spills or leaks should be cleaned up, flushed with clean water and thoroughly dried.

Interior care

Interior general precautions
Prevent chemicals such as perfume, cosmetic oil, sun cream, hand cleaner, and air freshener from contacting the interior parts because they may cause damage or discoloration. If they do contact the interior parts, wipe them off immediately. If necessary, use a vinyl cleaner, see instructions for correct usage.

CAUTION
Never allow water or other liquids to come in contact with electrical/electronic components inside the vehicle as this may damage them.

(Continued)

CAUTION

When cleaning leather products (steering wheel, seats etc.), use neutral detergents or low alcohol content solutions. If you use high alcohol content solutions or acid/alkaline detergents, the color of the leather may fade or the surface may get stripped off.

Taking care of leather seats
• Vacuum the seat periodically to remove dust and sand on the seat. It will prevent abrasion or damage of the leather and maintain its quality.
• Wipe the natural leather seat cover often with dry or soft cloth.
• Sufficient use of a leather protective may prevent abrasion of the cover and helps maintain the color. Be sure to read the instructions and consult a specialist when using leather coating or protective agents.
• Leather with bright colors (beige, cream beige) is easily contaminated and clear in appearance. Clean the seats frequently.
• Avoid wiping with wet cloth. It may cause the surface to crack.

Cleaning the leather seats
• Remove all contaminations instantly. Refer to instructions below for removal of each contaminant.
• Cosmetic products (sunscreen, foundation, etc.)
  - Apply cleansing cream on a cloth and wipe the contaminated point. Wipe off the cream with a wet cloth and remove water with a dry cloth.
• Beverages (coffee, soft drink, etc.)
  - Apply a small amount of neutral detergent and wipe until contaminations do not smear.
• Oil
  - Remove oil instantly with absorbable cloth and wipe with stain remover for natural leather only.
• Chewing gum
  - Harden the gum with ice and remove gradually.
Fabric seat cover (If equipped)
Please clean the fabric seats regularly with a vacuum cleaner in consideration of fabric material characteristics. If they are heavily soiled with beverage stains, etc., use a suitable interior cleaner. To prevent damage to seat covers, wipe off the seat covers down to the seams with a large wiping motion and moderate pressure using a soft sponge or microfiber cloth. Velcro closures on clothing or sharp objects may cause snagging or scratches on the surface of the seats. Make sure not to rub such objects against the surface.

Cleaning the upholstery and interior trim

Vinyl
Remove dust and loose dirt from vinyl with a whisk broom or vacuum cleaner. Clean vinyl surfaces with a vinyl cleaner.

Fabric
Remove dust and loose dirt from fabric with a whisk broom or vacuum cleaner. Clean with a mild soap solution recommended for upholstery or carpets. Remove fresh spots immediately with a fabric spot cleaner. If fresh spots do not receive immediate attention, the fabric can be stained and its color can be affected. Also, its fire-resistant properties can be reduced if the material is not properly maintained.

Cleaning the interior window glass
If the interior glass surfaces of the vehicle become fogged (that is, covered with an oily, greasy or waxy film), they should be cleaned with a glass cleaner. Follow the directions on the glass cleaner container.

⚠️ CAUTION

Do not scrape or scratch the inside of the rear window. This may result in damage of the rear window defroster grid.

⚠️ CAUTION

Using anything but recommended cleaners and procedures may affect the fabric’s appearance and fire-resistant properties.

Cleaning the lap/shoulder belt webbing
Clean the belt webbing with any mild soap solution recommended for cleaning upholstery or carpet. Follow the instructions provided with the soap. Do not bleach or re-dye the webbing because this may weaken it.
EMISSION CONTROL SYSTEM (IF EQUIPPED)

The emission control system of your vehicle is covered by a written limited warranty. Please see the warranty information contained in the Warranty & Maintenance book in your vehicle. Your vehicle is equipped with an emission control system to meet all applicable emission regulations. There are three emission control systems, as follows:

1. Crankcase emission control system
2. Evaporative emission control system
3. Exhaust emission control system

In order to assure the proper function of the emission control systems, have your vehicle inspected and maintained by a professional workshop in accordance with the maintenance schedule in this manual. Kia recommends to visit an authorized Kia dealer/service partner.

Caution for the Inspection and Maintenance Test (With Electronic Stability Control (ESC) system)

• To prevent the vehicle from misfiring during dynamometer testing, turn the Electronic Stability Control (ESC) system off by pressing the ESC switch.

• After dynamometer testing is completed, turn the ESC system back on by pressing the ESC switch again.

1. Crankcase emission control system

The positive crankcase ventilation system is employed to prevent air pollution caused by blow-by gases being emitted from the crankcase. This system supplies fresh filtered air to the crankcase through the air intake hose. Inside the crankcase, the fresh air mixes with blow-by gases, which then pass through the PCV valve into the induction system.

2. Evaporative emission control system

The Evaporative Emission Control System is designed to prevent fuel vapors from escaping into the atmosphere.

Canister

Fuel vapors generated inside the fuel tank are absorbed and stored in the on-board canister. When the engine is running, the fuel vapors absorbed in the canister are drawn into the surge tank through the purge control solenoid valve.

Purge Control Solenoid Valve (PCSV)

The purge control solenoid valve is controlled by the Engine Control Module (ECM); when the engine coolant temperature is low during idling, the PCSV closes so that evaporated fuel is not taken into the engine. After the engine warms up during ordinary driving, the PCSV opens to introduce evaporated fuel to the engine.

3. Exhaust emission control system

The Exhaust Emission Control System is a highly effective system which controls exhaust emissions while maintaining good vehicle performance.

Vehicle modifications

This vehicle should not be modified. Modification of your vehicle could affect its performance, safety or durability and may even violate governmental safety and emissions regulations. In addition, damage or performance problems resulting from any modification may not be covered under warranty.
• If you use unauthorized electronic devices, it may cause the vehicle to operate abnormally, wire damage, battery discharge and fire. For your safety, do not use unauthorized electronic devices.

**Engine exhaust gas precautions (carbon monoxide)**

• Carbon monoxide can be present with other exhaust fumes. Therefore, if you smell exhaust fumes of any kind inside your vehicle, have it inspected and repaired immediately. If you ever suspect exhaust fumes are coming into your vehicle, drive it only with all the windows fully open. Have your vehicle checked and repaired immediately.

• Do not operate the engine in confined or closed areas (such as garages) any more than what is necessary to move the vehicle in or out of the area.

• When the vehicle is stopped in an open area for more than a short time with the engine running, adjust the ventilation system (as needed) to draw outside air into the vehicle.

• Never sit in a parked or stopped vehicle for any extended time with the engine running.

• When the engine stalls or fails to start, excessive attempts to restart the engine may cause damage to the emission control system.

**Operating precautions for catalytic converters (if equipped)**

**WARNING**

- **Exhaust**

  Engine exhaust gases contain carbon monoxide (CO). Though colorless and odorless, it is dangerous and could be lethal if inhaled. Follow the instructions on this page to avoid CO poisoning.

- **Fire**

  (Continued)

- A hot exhaust system can ignite flammable items under your vehicle. Do not park the vehicle over or near flammable objects, such as grass, vegetation, paper, leaves, etc.

- The exhaust system and catalytic system are very hot while the engine is running or immediately after the engine is turned off. Keep away from the exhaust system and catalytic, you may get burned. Also, do not remove the heat sink around the exhaust system, do not seal the bottom of the vehicle or do not coat the vehicle for corrosion control. It may present a fire risk under certain conditions.

Your vehicle is equipped with a catalytic converter emission control device. Therefore, the following precautions must be observed:

- Use only UNLEADED FUEL for gasoline engines.

- Do not operate the vehicle when there are signs of engine malfunction, such as misfire or a noticeable loss of performance.
• Do not misuse or abuse the engine. Examples of misuse are coasting with the ignition off and descending steep grades in gear with the ignition off.

• Do not operate the engine at high idle speed for extended periods (5 minutes or more).

• Do not modify or tamper with any part of the engine or emission control system. All inspections and adjustments must be made by a professional workshop. Kia recommends to visit an authorized Kia dealer/service center.

• Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire, damaging the catalytic converter.

Failure to observe these precautions could result in damage to the catalytic converter and to your vehicle. Additionally, such actions could void your warranties.

**Diesel Particulate Filter (if equipped)**

The Diesel Particulate Filter (DPF) system removes the soot in the exhaust gas. Unlike a disposable air filter, the DPF system automatically burns (oxidizes) and removes the accumulated soot according to the driving condition. In other words, the active burning by engine control system and high exhaust gas temperature caused by normal/high driving condition burns and removes the accumulated soot. However, if the vehicle continues to be driven at repeated short distance or driven at low speed for a long time, the accumulated soot may not be automatically removed because of low exhaust gas temperature. More than a certain amount of soot deposited, the malfunction indicator light (\[
\text{\#} \]
) illuminates. When the malfunction indicator light blinks, it may stop blinking by driving the vehicle at more than 60 km/h (37 mph) or at more than second gear with 1500 ~ 2500 engine rpm for a certain time (for about 25 minutes). If the malfunction indicator light continues to be blinked or the warning message “Check exhaust system” illuminates in spite of the procedure, visit a professional workshop and check the DPF system. Kia recommends to visit an authorized Kia dealer/service partner.

If you continue to drive with the malfunction indicator light blinking for a long time, the DPF system can be damaged and fuel consumption can be worsened.

![CAUTION](https://example.com/caution.png)

**Diesel Fuel (if equipped with DPF)**

It is recommended to use the regulated automotive diesel fuel for diesel vehicle equipped with the DPF system. If you use diesel fuel including high sulfur (more than 50 ppm sulfur) and unspecified additives, it can cause the DPF system to be damaged and white smoke can be emitted.

**Lean NOx Trap (if equipped)**

The Lean NOx Trap (LNT) system removes the nitrogen oxide in the exhaust gas. The smell can occur in the exhaust gas depending on the quality of the fuel and it can degrade NOx reduction performance, please use the regulated automotive diesel fuel

*1 Only for 225/40R18 Tire size

⚠️ **CAUTION**

When replacing tires, use the same size originally supplied with the vehicle. Using tires of a different size can damage the related parts or make it work irregularly.
• We recommend that when replacing tires, use the same originally supplied with the vehicles. If not, that affects driving performance.
• When driving in high altitude grades, it is natural for the atmospheric pressure to decrease. Therefore, please check the tire pressure and add more air when necessary. Additionally required tire air pressure per km above sea level: (1.5 psi)/km

**RECOMMENDED LUBRICANTS AND CAPACITIES**

To help achieve proper engine and powertrain performance and durability, use only lubricants of the proper quality. The correct lubricants also help promote engine efficiency that results in improved fuel economy. These lubricants and fluids are recommended for use in your vehicle.

*1 Refer to “Recommended SAE viscosity number” on page 9-13.
Engine oils labeled Energy Conserving Oil are now available. Along with other additional benefits, they contribute to fuel economy by reducing the amount of fuel necessary to overcome engine friction. Often, these improvements are difficult to measure in everyday driving, but in a year’s time, they can offer significant cost and energy savings.

If the API service SM engine oil is not available in your country, you are able to use API service SL.

Diesel Particulate Filter

If the ACEA C2 or C3, B4 engine oil is not available in your country, you are able to use API CH-4 (or above).

Recommended SAE viscosity number

⚠️ CAUTION

Always be sure to clean the area around any filler plug, drain plug, or dipstick before checking or draining any lubricant. This is especially important in dusty or sandy areas and when the vehicle is used on unpaved roads. Cleaning the plug and dipstick areas will prevent dirt and grit from entering the engine and other mechanisms that could be damaged.

Engine oil viscosity (thickness) has an effect on fuel economy and cold weather operating (engine start and engine oil flowability). Lower viscosity engine oils can provide better fuel economy and cold weather performance, however, higher viscosity engine oils are required for satisfactory lubrication in hot weather. Using oils of any viscosity other than those recommended could result in engine damage. When choosing an oil, consider the range of temperature your vehicle will be operated in before the next oil change. Proceed to select the recommended oil viscosity from the chart.
### Temperature Range for SAE Viscosity Numbers

| Temperature | °C (°F) | -30 | -20 | -10 | 0 | 10 | 20 | 30 | 40 | 50 | -10 | 0 | 20 | 40 | 60 | 80 | 100 | 120 |

| | | 5W-30 | | | | | | | | | | | | | | | | | |
| | | 0W-30 | | | | | | | | | | | | | | | | | |

**1**: For better fuel economy, it is recommended to use the engine oil of a viscosity grade SAE 5W-20 (Except Middle East) or 5W-30 (For Middle East). However, if the engine oil is not available in your country, select the proper engine oil using the engine oil viscosity chart.

**2**: Middle East includes Libya, Algeria, Morocco, Tunisia, Sudan, Egypt and Iran.

**3**: For better fuel economy, it is recommended to use the engine oil of a viscosity grade SAE 5W-30 (ACEA A5 or above).
VEHICLE IDENTIFICATION NUMBER (VIN)

The vehicle identification number (VIN) is the number used in registering your vehicle and in all legal matters pertaining to its ownership, etc.

The VIN is also on a plate attached to the top of the dashboard. The number on the plate can easily be seen through the windshield from outside.
VEHICLE CERTIFICATION LABEL

The vehicle certification label attached on the driver’s (or front passenger’s) side center pillar gives the vehicle identification number (VIN).
The tires supplied on your new vehicle are chosen to provide the best performance for normal driving. The tire label located on the driver's side center pillar gives the tire pressures recommended for your vehicle.
The engine number is stamped on the engine block as shown in the drawing.
A compressor label informs you the type of compressor your vehicle is equipped with such as model, supplier part number, production number, refrigerant (1) and refrigerant oil (2).
REFRIGERANT LABEL

The refrigerant label is located at the front of the engine room.
The radio frequency components of the vehicle comply with requirements and other relevant provisions of Directive 1995/5/EC.

Further information including the manufacturer’s declaration of conformity is available on Kia web site as follows:
http://www.kia-hotline.com
