WARNING – California Proposition 65

“Operating, servicing and maintaining a passenger vehicle or off-road vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle.”
Kia, THE COMPANY

Thank you for becoming the owner of a new Kia vehicle.

As a global car manufacturer focused on building high-quality vehicles with exceptional value, Kia Motors is dedicated to providing you with a customer service experience that exceeds your expectations.

All information contained in this Owner’s Manual was accurate at the time of publication. However, Kia reserves the right to make changes at any time so that our policy of continual product improvement can be carried out.

This manual applies to all trims of this vehicle and includes images, descriptions, and explanations of optional as well as standard equipment. As a result, some material in this manual may not be applicable to your specific Kia vehicle. Some images are shown for illustration only and may show features that differ from those on your vehicle.

Drive safely and enjoy your Kia!
Thank you for choosing a Kia vehicle.
When you require service, remember that your Kia dealer knows your vehicle best. Your dealer has factory-trained technicians, recommended special tools and genuine Kia replacement parts. It is dedicated to your complete customer satisfaction.

Because subsequent owners require this important information as well, this publication should remain with the vehicle if it is sold.

This manual will familiarize you with operational, maintenance and safety information about your new vehicle. It is supplemented by a Warranty and Consumer Information manual that provides important information on all warranties regarding your vehicle.

We urge you to read these publications carefully and follow the recommendations to help assure enjoyable and safe operation of your new vehicle.

Kia offers a great variety of options, components and features for its various models. Therefore, some of the equipment described in this manual, along with the various illustrations, may not be applicable to your particular vehicle.

The information and specifications provided in this manual were accurate at the time of printing. Kia reserves the right to discontinue or change specifications or design at any time without notice and without incurring any obligation. If you have questions, always check with your Kia dealer.

We assure you of our continuing interest in your motoring pleasure and satisfaction in your Kia vehicle.

HOW TO USE THIS MANUAL

We want to help you get the greatest possible driving pleasure from your vehicle. Your Owner’s Manual can assist you in many ways. We strongly recommend that you read the entire manual. In order to minimize the chance of death or injury, you must read the WARNING and CAUTION sections in the manual.

Illustrations complement the words in this manual to best explain how to enjoy your vehicle. By reading your manual, you will learn about features, important safety information, and driving tips under various road conditions.

The general layout of the manual is provided in the Table of Contents. Use the index when looking for a specific area or subject; it has an alphabetical listing of all located in the back of this manual.

Sections: This manual has eight sections plus an index. Each section begins with a brief list of contents so you can tell at a glance if that section has the information you want.

You will find various types of safety instructions in this manual. These instructions were prepared to enhance your personal safety. Carefully read and follow ALL procedures and recommendations provided in these instructions.

NOTICE
A NOTICE indicates interesting or helpful information is being provided.
FUEL REQUIREMENTS

Your new Kia vehicle is designed to use only unleaded fuel having a pump octane number \(\frac{(R+M)}{2}\) of 87 (Research Octane Number 91) or higher. (Do not use methanol blended fuels)

Your new vehicle is designed to obtain maximum performance with UNLEADED FUEL, as well as minimize exhaust emissions and spark plug fouling.

Never add any fuel system cleaning agents to the fuel tank other than what has been specified. (Consult an authorized Kia dealer for details.)

**WARNING - Refueling**

- Do not "top off" after the nozzle automatically shuts off. Attempts to force more fuel into the tank can cause fuel overflow onto you and the ground causing a risk of fire.
- Always check that the fuel cap is installed securely to prevent fuel spillage, especially in the event of an accident.

Tighten the cap until it clicks one time, otherwise the fuel cap open warning indicator light (or LCD display) will illuminate.

**Gasoline containing alcohol and methanol**

Gasohol, a mixture of gasoline and ethanol (also known as grain alcohol), and gasoline or gasohol containing methanol (also known as wood alcohol) are being marketed along with or instead of leaded or unleaded gasoline.

Pursuant to EPA regulations, ethanol may be used in your vehicle. Do not use gasohol containing more than 15 percent ethanol, and do not use gasoline or gasohol containing any methanol. Ethanol provides less energy than gasoline and it attracts water, and it is thus likely to reduce your fuel efficiency and could lower your MPG results. Methanol may cause drivability problems and damage to the fuel system, engine control system and emission control system.

**NOTICE**

Never use any fuel containing methanol. Discontinue use of any methanol containing product which may inhibit proper drivability.
Discontinue using gasohol of any kind if drivability problems occur. Vehicle damage or drivability problems may not be covered by the manufacturer’s warranty if they result from the use of:

1. Gasoline or gasohol containing methanol.
2. Leaded fuel or leaded gasohol.
3. Gasohol containing more than 15 percent ethanol.

"E85" fuel is an alternative fuel comprised of 85 percent ethanol and 15 percent gasoline, and is manufactured exclusively for use in Flexible Fuel Vehicles. “E85” is not compatible with your vehicle. Use of “E85” may result in poor engine performance and damage to your vehicle’s engine and fuel system. Kia recommends that customers do not use fuel with an ethanol content exceeding 15 percent.

**NOTICE**

Your New Vehicle Limited Warranty does not cover damage to the fuel system or any performance problems caused by the use of “E85” fuel.

**Other fuels**

Using fuels that contain Silicone (Si), MMT (Manganese, Mn), Ferrocene (Fe), and Other metallic additives, may cause vehicle and engine damage or cause misfiring, poor acceleration, engine stalling, catalyst melting, clogging, abnormal corrosion, life cycle reduction, etc. Also, the Malfunction Indicator Lamp (MIL) may illuminate.

**NOTICE**

Damage to the fuel system or performance problem caused by the use of these fuels may not be covered by your New Vehicle Limited Warranty.
Gasoline containing MMT
Some gasoline contains harmful manganese-based fuel additives such as MMT (Methylcyclopentadienyl Manganese Tricarbonyl).
Kia does not recommend the use of gasoline containing MMT.
This type of fuel can reduce vehicle performance and affect your emission control system.
The malfunction indicator lamp on the cluster may come on.

Do not use methanol
Fuels containing methanol (wood alcohol) should not be used in your vehicle. This type of fuel can reduce vehicle performance and damage components of the fuel system, engine control system and emission control system.

Fuel Additives
Kia recommends that you use good quality gasolines treated with detergent additives such as TOP TIER Detergent Gasoline, which helps prevent deposit formation in the engine. These gasolines will help the engine run cleaner and enhance performance of the Emission Control System. For more information on TOP TIER Detergent Gasoline, please go to the website (www.top-tiergas.com).
For Customers who do not use TOP TIER Detergent Gasoline regularly, and have problems starting or the engine does not run smoothly, additives that you can buy separately may be added to the gasoline. If TOP TIER Detergent Gasoline is not available, one bottle of additive added to the fuel tank at 7,500 miles or every engine oil change is recommended. Additives are available from your authorized Kia dealer along with information on how to use them. Do not mix other additives.

Operation in foreign countries
If you are going to drive your vehicle in another country, be sure to:
• Observe all regulations regarding registration and insurance.
• Determine that acceptable fuel is available.
VEHICLE HANDLING INSTRUCTIONS
As with other vehicles of this type, failure to operate this vehicle correctly may result in loss of control, an accident or vehicle rollover. Specific design characteristics (higher ground clearance, track, etc.) give this vehicle a higher center of gravity than other types of vehicles. It is not designed for cornering at the same speeds as a conventional 2-wheel drive sedans or sports coupe. Avoid sharp turns or abrupt maneuvers. Failure to operate this vehicle correctly may result in loss of control, an accident or vehicle rollover. Be sure to read the “Reducing the risk of a rollover” driving guidelines, in chapter 6 of this manual.

VEHICLE BREAK-IN PROCESS
No special break-in period is needed. By following a few simple precautions for the first 600 miles (1,000 km) you may add to the performance, economy and life of your vehicle.

- Do not race the engine.
- While driving, keep your engine speed (rpm, or revolutions per minute) between 2,000 rpm and 4,000 rpm.
- Do not maintain a single speed for long periods of time, either fast or slow. Varying engine speed is needed to properly break-in the engine.
- Avoid hard stops, except in emergencies, to allow the brakes to seat properly.
- Don’t tow a trailer during the first 1,200 miles (2,000 km) of operation.
VEHICLE DATA COLLECTION AND EVENT DATA RECORDERS

This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

* How various systems in your vehicle were operating;
* Whether or not the driver and passenger safety belts were buckled/ fastened;
* How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
* How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur. NOTE: EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.

Your rights with respect to the information discussed above may vary from state to state. In some states, such information is considered private, is exclusively owned by the owner of the motor vehicle, and is not retrievable or usable by another person or entity.

Safety features of your vehicle

Important safety precautions 3-2
• Always wear your seat belt 3-2
• Restrain all children 3-2
• Air bag hazards 3-2
• Driver distraction 3-2
• Control your speed 3-3
• Keep your vehicle in safe condition 3-3
Seats 3-4
• Front seat adjustment - manual 3-7
• Front seat adjustment - power 3-8
• Seatback pocket 3-13
• Rear seat adjustment 3-13
Seat belts 3-18
• Seat belt restraint system 3-18
• Pre-tensioner seat belt 3-26
• Seat belt precautions 3-28
• Care of seat belts 3-30
Child restraint system (CRS) 3-31
• Children always in the rear 3-31
• Selecting a Child Restraint System (CRS) 3-32
• Installing a Child Restraint System (CRS) 3-35
Air bag - advanced supplemental restraint system 3-42
• How does the air bag system operate 3-43
• Air bag warning light 3-45
• SRS components and functions 3-46
• Occupant Detection System (ODS) 3-49
• Driver’s and passenger’s front air bag 3-56
• Side air bag 3-59
• Curtain air bag 3-61
• SRS Care 3-67
• Adding equipment to or modifying your air bag-equipped vehicle 3-68
• Air bag warning label 3-68
IMPORTANT SAFETY PRECAUTIONS

You will find many safety precautions and recommendations throughout this section, and throughout this manual. The safety precautions in this section are among the most important.

**Always wear your seat belt**
A seat belt is your best protection in all types of accidents. Air bags are designed to supplement seat belts, not replace them. So even though your vehicle is equipped with air bags, ALWAYS make sure you and your passengers wear your seat belts, and wear them properly.

**Restrain all children**
All children under age 13 should ride in your vehicle properly restrained in a rear seat, not the front seat. Infants and small children should be restrained in an appropriate child restraint. Larger children should use a booster seat with the lap/shoulder belt until they can use the seat belt properly without a booster seat.

**Air bag hazards**
While air bags can save lives, they can also cause serious or fatal injuries to occupants who sit too close to them, or who are not properly restrained. Infants, young children, and shorter adults are at the greatest risk of being injured by an inflating air bag. Follow all instructions and warnings in this manual.

**Driver distraction**
Driver distraction presents a serious and potentially deadly danger, especially for inexperienced drivers. Safety should be the first concern when behind the wheel and drivers need to be aware of the wide array of potential distractions, such as drowsiness, reaching for objects, eating, personal grooming, other passengers, and using cellular phones.

Drivers can become distracted when they take their eyes and attention off the road or their hands off the wheel to focus on activities other than driving. To reduce your risk of distraction or getting into an accident:
• ALWAYS set up your mobile devices (i.e., MP3 players, phones, navigation units, etc.) when your vehicle is parked or safely stopped.

• ONLY use your mobile device when allowed by laws and when conditions permit safe use. NEVER text or email while driving. Most states have laws prohibiting drivers from texting. Some states and cities also prohibit drivers from using handheld phones.

• NEVER let the use of a mobile device distract you from driving. You have a responsibility to your passengers and others on the road to always drive safely, with your hands on the wheel as well as your eyes and attention on the road.

Control your speed
Excessive speed is a major factor in crash injuries and deaths. Generally, the higher the speed, the greater the risk, but serious injuries can also occur at lower speeds. Never drive faster than is safe for current conditions, regardless of the maximum speed posted.

Keep your vehicle in safe condition
Having a tire blowout or a mechanical failure can be extremely hazardous. To reduce the possibility of such problems, check your tire pressures and condition frequently, and perform all regularly scheduled maintenance.
Safety features of your vehicle

SEATS

Front seat
(1) Forward and backward
(2) Seatback angle
(3) Seat cushion height (Driver's seat)
(4) Lumbar support (Driver's seat)
(5) Headrest

Rear seats
(6) Seatback folding
(7) Headrest
WARNING - Loose objects
Do not place anything in the driver's foot well or under the front seats. Loose objects in the driver's foot area could interfere with the operation of the foot pedals.

WARNING - Uprighting seat
Do not press the release lever on a manual seatback without holding and controlling the seatback. The seatback will spring upright possibly impacting you or other passengers.

WARNING - Seat cushion
Occupants should never sit on aftermarket seat cushions or sitting cushions. The passenger's hips may slide under the lap portion of the seat belt during an accident or a sudden stop.

WARNING - Driver responsibility for passengers
The driver must advise the passenger to keep the seatback in an upright position whenever the vehicle is in motion. If a seat is reclined during an accident, the restraint system's ability to restrain will be greatly reduced.

WARNING - Driver's seat
- Never attempt to adjust the seat while the vehicle is moving. This could result in loss of control of your vehicle.
- Do not allow anything to interfere with the normal position of the seatback. Storing items against the seatback could result in serious or fatal injury in a sudden stop or collision.
- Sit as far back as possible from the steering wheel while still maintaining comfortable control of the your vehicle. A distance of at least 10" from your chest to the steering wheel is recommended. Failure to do so can result in airbag inflation injuries to the driver.

WARNING - Rear seatbacks
Always lock the rear seatback before driving. Failure to do so could result in passengers or objects being thrown forward injuring vehicle occupants.
Safety features of your vehicle

**WARNING - Luggage and Cargo**
Do not stack pile or stack luggage or cargo higher than the seatback in the cargo area. In an accident the cargo could strike and injury a passenger. If objects are large, heavy or must be piled, they must be secured in the cargo area.

**WARNING - Unexpected Seat Movement**
After adjusting a manual seat, always check that it is locked by shifting your weight to the front and back. Sudden or unexpected movement of the driver’s seat could cause you to lose control of the vehicle.

**WARNING - Seat adjustment**
- Do not adjust the seat while wearing seat belts. Moving the seat forward will cause strong pressure on the abdomen.

(Continued)

**Feature of Seat Leather**
- Leather is made from the outer skin of an animal, which goes through a special process to be available for use. Since it is a natural substance, each part differs in thickness or density.
- Wrinkles may appear as a natural result of stretching and shrinking depending on the temperature and humidity.
- The seat is made of stretchable fabric to improve comfort.
- The parts contacting the body are curved and the side supporting area is high which provides driving comfort and stability.
- Wrinkles may appear naturally from usage. It is not a fault of the product.

**WARNING - Small Objects**
Use extreme caution when picking up small objects trapped under the seats or between the seat and the center console. Your hands might be cut or injured by the sharp edges of the seats mechanism.

**WARNING - Cargo Area**
Do not allow passengers to ride in the cargo area under any circumstance. The cargo area is solely for the purpose of transporting luggage or cargo.

(Continued)
**CAUTION**

- Belts with metallic accessories, zippers or keys inside your back pants pocket may damage the seat fabric.
- Make sure not to wet the seat. It may change the nature of natural leather.
- Jeans or clothes which contain bleach may contaminate the surface of the seat covering fabric and cause damage or discoloration.

**NOTICE**

Wrinkles or abrasions which appear naturally from usage are not covered by warranty.

---

**Front seat adjustment - manual**

*Forward and backward*

To move the seat forward or backward:
1. Pull the seat slide adjustment lever up and hold it.
2. Slide the seat to the position you desire.
3. Release the lever and make sure the seat is locked in place.

Adjust the seat before driving, and make sure the seat is locked securely by trying to move forward and backward without using the lever. If the seat moves, it is not locked properly.

**Seatback angle**

To recline the seatback:
1. Lean forward slightly and lift up the seatback recline lever.
2. Carefully lean back on the seat and adjust the seatback to the position you desire.
3. Release the lever and make sure the seatback is locked in place. (The lever MUST return to its original position for the seatback to lock.)
Seat height (for driver’s seat)

To change the height of the seat, push the lever upwards or downwards.

- To lower the seat cushion, push the lever down several times.
- To raise the seat cushion, pull the lever up several times.

Front seat adjustment - power (if equipped)

The front seat can be adjusted by using the control switches located on the outside of the seat cushion. Before driving, adjust the seat to the proper position so you can easily control the steering wheel, pedals and switches on the instrument panel.

WARNING - Unattended children

Do not leave children unattended in the vehicle. Children might operate features of the vehicle that could injure them.

CAUTION - Power seat adjustments

The power seating controls function by electronic motor. Excessive operation may cause damage to the electrical equipment.

CAUTION - Power Seating

Do not operate two or more power seat control switches at the same time. Doing so may damage the power seat motor or electrical components.

When in operation, the power seat consumes a large amount of electrical power. To prevent unnecessary charging system drain, don’t adjust the power seat longer than necessary while the engine is not running.
Safety features of your vehicle

**Forward and backward**

Push the control switch forward or backward to move the seat to the desired position. Release the switch once the seat reaches the desired position.

**Seatback angle**

Push the control switch forward or backward to move the seatback to the desired angle. Release the switch once the seat reaches the desired position.

**Seat height (for driver’s seat)**

Pull the front portion of the control switch up to raise or press down to lower the front part of the seat cushion. Pull the rear portion of the control switch up to raise or press down to lower the seat cushion. Release the switch once the seat reaches the desired position.
Safety features of your vehicle

**Lumbar support (for driver's seat)**

The depth of the lumbar support can be adjusted by pressing the button fore and after. If equipped, the location of the lumbar support can be adjusted up and down by pressing the button up and down.

**Headrest (for front seat)**

The driver's and front passenger's seats are equipped with a headrest for the occupant's safety and comfort. The headrest not only provides comfort for the driver and front passenger, but also helps protect the head and neck in the event of a rear collision. For maximum effectiveness in case of an accident, the headrest should be adjusted so the middle of the headrest is at the same height of the center of gravity of an occupant's head.

Generally, the center of gravity of most people's head is similar with the height of the top of their eyes. Also, adjust the headrest as close to your head as possible. For this reason, the use of a cushion that holds the body away from the seatback is not recommended.

**WARNING - Headrest removal/adjustment**

- Do not operate the vehicle with the headrests removed. Headrests can provide critical neck and head support in a crash.
- Do not adjust the headrest height while the vehicle is in motion. Driver may lose control of the vehicle.

**CAUTION**

*Excessive pulling or pushing may damage the headrest.*
Safety features of your vehicle

Adjusting the height up and down
To raise the headrest, pull it up to the desired position (1). To lower the headrest, push and hold the release button (2) on the headrest support and lower the headrest to the desired position (3).

* NOTICE
If you recline the seatback towards the front with the headrest and seat cushion raised, the headrest may come in contact with the sunvisor or other parts of the vehicle.

Removal and installation
To remove the headrest:
1. Recline the seatback (2) with the recline lever or switch (1).
2. Raise headrest as far as it can go.
3. Press the headrest release button (3) while pulling the headrest up (4).
To reinstall the headrest:

1. Put the headrest poles (2) into the holes while pressing the release button (1).
2. Recline the seatback (4) with the recline lever or switch (3).
3. Adjust the headrest to the appropriate height.

WARNING - Headrest Removal
NEVER allow anyone to ride in a seat with the headrest removed. Headrests can provide critical neck and head support in a crash.

WARNING - Headrest Reinstallation
To reduce the risk of injury to the head or neck, always make sure the headrest is locked into position and adjusted properly after reinstalling.
Seatback pocket (if equipped)

The seatback pocket is provided on the back of the front passenger's seatbacks.

**WARNING - Seatback pockets**
Do not put heavy or sharp objects in the seatback pocket. An occupant could contact such objects in a crash. Heavy objects in the front passenger seatback could also interfere with the airbag sensing system.

Rear seat adjustment

_Folding the rear seat_

The rear seatbacks can be folded to facilitate carrying long items or to increase the luggage capacity of the vehicle.

**WARNING - Folded Seatback**

The purpose of the fold-down rear seatbacks is to allow you to carry longer objects than could not otherwise be accommodated.

- Never allow a passenger to sit on top of the folded down seatback while the car is moving. This is not a proper seating position since no seat belts are available for use.
- To reduce the risk of injury caused by sliding cargo within the passenger compartment of the vehicle, objects carried on the folded down seatback should not extend higher than the top of the front seats.

**WARNING - Objects**

Objects carried on the folded down seatback should not extend higher than the top of the front seatbacks. This could allow cargo to slide forward and cause injury or damage during sudden stops.
Safety features of your vehicle

To fold down the rear seatback
1. Insert the rear seat belt buckle in the pocket (if equipped) between the rear seatback and cushion, and insert the rear seat belt webbing in the guide to prevent the seat belt from being damaged.
2. Set the front seatback to the upright position and if necessary, slide the front seat forward.
3. Lower the rear headrests to the lowest position.
4. Pull on the seatback folding lever, then fold the seat toward the front of the vehicle. When you return the seatback to its upright position, always be sure it has locked into position by pushing on the top of the seatback.
5. To use the rear seat, lift and pull the seatback backward by pulling on the folding lever.
   Pull the seatback firmly until it clicks into place.
   Make sure the seatback is locked in place.
6. Return the rear seat belt to the proper position.
**WARNING - Cargo**
Do not place heavy objects in the rear seats, since they cannot be properly secured and may hit vehicle occupants in a frontal collision.

**WARNING - Cargo loading**
Make sure the engine is off, the automatic transaxle / dual clutch transmission is in P (Park) and the parking brake is securely applied whenever loading or unloading cargo. Failure to take these steps may allow the vehicle to move if the shift lever is inadvertently moved to another position.

**NOTICE**
After folding the rear seat, unless the driver’s position is properly set according to the driver’s physical figure, do not fold the rear seat.

**WARNING - Upright seat**
When you return the seatback to its upright position, hold the seatback and return it slowly. If the seatback is returned without holding it, the back of the seat could spring forward, resulting in injury caused by being struck by the seatback.

**WARNING - Rear Seatback**
To ensure maximum protection in the event of an accident or sudden stop, when returning the rear seat to the upright position:
- Be careful not to damage the seat belt webbing or buckle.
- Do not allow the seat belt webbing or buckle to become pinched or caught in the rear seat.
- Ensure the seatback is completely locked into its upright position by pushing on the top of the seatback. Failure to adhere to any of these instructions could result in serious injury or death in the event of a crash.

**CAUTION - Damaging rear seat belt buckles**
When you fold the rear seatback, insert the buckle between the rear seatback and cushion. Doing so can prevent the buckle from being damaged by the rear seatback.
### Headrest

The rear seat(s) is equipped with headrests in all the seating positions for the occupant's safety and comfort. The headrest not only provides comfort for passengers, but also helps protect the head and neck in the event of a collision.

For maximum effectiveness in case of an accident, the headrest should be adjusted so the middle of the headrest is at the same height as the center of gravity of an occupant's head. Generally, the center of gravity of most people's head is similar with the height of the top of their eyes. Also adjust the headrest as close to your head as possible. For this reason, the use of a cushion that holds the body away from the seatback is not recommended.

![WARNING - Headrest removal/adjustment](image)

**WARNING - Headrest removal/adjustment**

Do not operate the vehicle with the headrests removed. Headrests can provide critical neck and head support in a crash.

### Adjusting the height up and down

To raise the headrest:
1. Pull it up to the desired position (1).

To lower the headrest:
1. Push and hold the release button (2) on the headrest support
2. Lower the headrest to the desired position (3).
Removal and installation

To remove the headrest:
1. Raise it as far as it can go then press the release button (1) while pulling the headrest up (2).

To reinstall the headrest:
1. Put the headrest poles (3) into the holes while pressing the release button (1).
2. Adjust it to the appropriate height.

Make sure the headrest locks in position after adjusting it to properly protect the occupants.

WARNING - Headrest installation
After installing the headrest, make sure that it is installed in the right direction. A headrest installed reversely could increase whiplash injury during rear impact.

Armrest (if equipped)

To use the armrest, pull it forward from the seatback.
SEAT BELTS

Seat belt restraint system

Seat belts are designed to bear upon the bony structure of the body, and should be worn low across the front of the pelvis, chest and shoulders, as applicable; wearing the lap section of the belt across the abdominal area must be avoided.

Seat belts should be adjusted as firmly as possible, consistent with comfort, to provide the protection for which they have been designed.

A slack belt will greatly reduce the protection afforded to the wearer.

Care should be taken to avoid contamination of the webbing with polishes, oils and chemicals, and particularly battery acid. Cleaning may safely be carried out using mild soap and water. The belt should be replaced if webbing becomes frayed, contaminated or damaged.

> **WARNING - Shoulder Belt**
> - Never wear the shoulder belt under your arm or behind your back. An improperly positioned shoulder belt cannot protect the occupant in a crash.
> - Always wear both the shoulder portion and lap portion of the lap/shoulder belt.

> **WARNING - Damaged seat belt**
> Replace the entire seat belt assembly if any part of the webbing or hardware is damaged as you can no longer be sure that a damaged seat belt will provide protection in a crash.

> **WARNING - Twisted seat belt**
> Make sure your seat belt is not twisted when worn. A twisted seat belt may not properly protect you in an accident and could even cut into your body.

• For maximum restraint system protection, the seat belts must always be used whenever the vehicle is moving. A properly positioned shoulder belt should be positioned midway over your shoulder across your collarbone.

• Never allow children to ride in the front passenger seat. See child restraint system section for further discussion.
Safety features of your vehicle

- No modifications or additions should be made by the user which will either prevent the seat belt adjusting devices from operating to remove slack, or prevent the seat belt assembly from being adjusted to remove slack.
- When you fasten the seat belt, be careful not to latch the seat belt in buckles of other seats. It's very dangerous and you may not be protected by the seat belt properly.
- Do not unfasten the seat belt and do not fasten and unfasten the seat belt repeatedly while driving. This could result in loss of control, and an accident causing death, serious injury, or property damage.
- When fastening the seat belt, make sure that the seat belt does not pass over objects that are hard or can break easily.

**WARNING - Seat belt buckle**

Do not allow foreign material (gum, crumbs, coins, etc.) to obstruct the seat belt buckle. This may prevent the seat belt from fastening securely.

*Seat belt warning (for driver’s seat)*

The driver's seat belt warning light and chime will activate pursuant to the following table when the ignition switch is in "ON" position.
Safety features of your vehicle

<table>
<thead>
<tr>
<th>Conditions</th>
<th>Warning Pattern</th>

</table>

*1 Warning pattern repeats 11 times with an interval of 24 seconds. If the driver's seat belt is buckled, the light will stop within 6 seconds and chime will stop immediately.

*2 The light will stop within 6 seconds and chime will stop immediately.

Seat belt - Driver’s 3-point system with emergency locking retractor

To fasten your seat belt:
To fasten your seat belt, pull it out of the retractor and insert the metal tab (1) into the buckle (2). There will be an audible "click" when the tab locks into the buckle.

The seat belt automatically adjusts to the proper length only after the lap belt portion is adjusted manually so that it fits snugly around your hips. If you lean forward in a slow, easy motion, the belt will extend and let you move around. If there is a sudden stop or impact, however, the belt will lock into position. It will also lock if you try to lean forward too quickly. If you are unable to pull out the seat belt from the retractor, firmly pull the belt out and release it. Then you will be able to pull the belt out smoothly.
Height adjustment
You can adjust the height of the shoulder belt anchor to one of the 3 positions for maximum comfort and safety. The height of the adjusting seat belt should not be too close to your neck. The shoulder portion should be adjusted so that it lies across your chest and midway over your shoulder near the door and not your neck.

To adjust the height of the seat belt anchor, lower or raise the height adjuster into an appropriate position.

To raise the height adjuster, pull it up (1). To lower it, push it down (3) while pressing the height adjuster button (2).

Release the button to lock the anchor into position. Try sliding the height adjuster to make sure that it has locked into position.

Improperly positioned seat belts can cause serious injuries in an accident.

**WARNING - Shoulder belt positioning**
Never position the shoulder belt across your neck or face.

**WARNING - Seat belt replacement**
Replace your seat belts after being in an accident. Failure to replace seat belts after an accident could leave you with damaged seat belts that will not provide protection in the event of another collision.

You should place the lap belt portion as low as possible and snugly across your hips, not on your waist. If the lap belt is located too high on your waist, it may increase the chance of injury in the event of a collision. Both arms should not be under or over the belt. Rather, one should be over and the other under, as shown in the illustration.

Never wear the seat belt under the arm that is near the door.
Safety features of your vehicle

Seat belts - Front passenger and rear seat 3-point system with combination locking retractor

To fasten your seat belt:
Combination retractor type seat belts are installed in the rear seat positions to help accommodate the installation of child restraint systems. Although a combination retractor is also installed in the front passenger seat position, it is strongly recommended that children always be seated in the rear seat. NEVER place any infant restraint system in the front seat of the vehicle.

This type of seat belt combines the features of both an emergency locking retractor seat belt and an automatic locking retractor seat belt. To fasten your seat belt, pull it out of the retractor and insert the metal tab into the buckle. There will be an audible "click" when the tab locks into the buckle. When not securing a child restraint, the seat belt operates in the same way as the driver's seat belt (Emergency Locking Retractor Type).

It automatically adjusts to the proper length only after the lap belt portion of the seat belt is adjusted manually so that it fits snugly around your hips. When the seat belt is fully extended from the retractor to allow the installation of a child restraint system, the seat belt operation changes to allow the belt to retract, but not to extend (Automatic Locking Retractor Type). Refer to “Using a child restraint system” in this section.

✽ NOTICE
Although the combination retractor provides the same level of protection for seated passengers in either emergency or automatic locking modes, have the seated passengers use the emergency locking feature for improved convenience. The automatic locking function is intended to facilitate child restraint installation. To convert from the automatic locking feature to the emergency locking operation mode, allow the unbuckled seat belt to fully retract.

Do NOT fold down the left portion of the rear seat back when the rear center seat belt is buckled. ALWAYS UNBuckle the rear center seat belt before folding down the left portion of the rear seat back. If the rear center seat belt is buckled when the left portion of the rear seat back is folded down, distortion and damage to the top portion of the seat back and seat belt garnish may result, causing the seat back to lock into the folded down position.

Do NOT fold down the left portion of
the rear seat back when the rear
center seat belt is buckled. ALWAYS
UNBuckle the rear center seat belt
before folding down the left portion of
the rear seat back. If the rear center
seat belt is buckled when the left por-
tion of the rear seat back is folded
down, distortion and damage to the
top portion of the seat back and seat
belt garnish may result, causing the
seat back to lock into the folded
down position.
To release the seat belt:
The seat belt is released by pressing the release button (1) on the locking buckle. When it is released, the belt should automatically draw back into the retractor.
If this does not happen, check the belt to be sure it is not twisted, then try again.

Routing the seat belt webbing through the rear seat belt guides will help keep the belts from being trapped behind or under the seats. After inserting the seat belt, tighten the belt webbing by pulling it up.

**CAUTION - Seat belt guide**
*Remove the seat belt from the guides before using. If you pull on the seat belt when it is stored in the guides, it may damage the guides and/or belt webbing.*
3 Point rear center belt

To fasten the rear center belt
1. Insert the mini tongue (A) into the open end of the anchor connector (C) until an audible “click” is heard, indicating the latch is locked. Make sure the belt is not twisted.

![Diagram of 3 Point rear center belt](ORP032073C)

**WARNING - Rear center seat belt**
Do not separate mini tongue and mini buckle even if there is not an occupant. If it is separated, it may hit the rear seat occupants in a collision or sudden stops.

2. Pull the tongue plate (B) and insert the tongue plate (B) into the open end of the buckle (D) until an audible “click” is heard, indicating the latch is locked. Make sure the belt is not twisted.

When using the rear center seat belt, the buckle with the “CENTER” mark must be used.
There will be an audible “click” when the tab locks in the buckle. The seat belt automatically adjusts to the proper length only after the lap belt is adjusted manually so that it fits snugly around your hips, if you lean forward in a slow, easy motion, the belt will extend and let you move around. If there is a sudden stop or impact, the belt will lock into position. It will also lock if you try to lean forward too quickly.

When using the rear seat center belt, you must lock all tongue plates and buckles.

**To unfasten the rear center belt**

Press the release button on the buckle (D) and remove the tongue plate (B) from the buckle (D).

**When you fold the rear seatback**

To retract the rear center seatbelt, insert the tongue plate or similar small rigid device into the web release hole (C). Pull up on the seat belt web (A) and allow the webbing to retract automatically.
Your vehicle is equipped with driver's and front passenger's pre-tensioner seat belts (retractor pretensioner and EFD (Emergency Fastening Device)). The pre-tensioner seat belts may be activated, when a frontal collision is severe enough, together with the air bags.

When the vehicle stops suddenly, or if the occupant tries to lean forward too quickly, the seat belt retractor may lock into position. In certain frontal collisions, the pre-tensioner will activate and pull the seat belt into tighter contact against the occupant's body.

(1) Retractor Pretensioner
The purpose of the retractor pretensioner is to make sure that the shoulder belts fit in tightly against the occupant's upper body in certain frontal collisions.

(2) EFD (Emergency Fastening Device)
The purpose of the EFD is to make sure that the pelvis belts fit in tightly against the occupant's lower body in certain frontal collisions.

If the system senses excessive tension on the driver or passenger's seat belt when the pre-tensioner system activates, the load limiter inside the retractor pre-tensioner will release some of the pressure on the affected seat belt.

∗ NOTICE
When the pre-tensioner seat belts are activated, a loud noise may be heard and fine dust, which may appear to be smoke, may be visible in the passenger compartment. These are normal operating conditions and are not hazardous.

The seat belt pre-tensioner system consists mainly of the following components. Their locations are shown in the illustration:
1. SRS air bag warning light
2. Retractor pre-tensioner assembly
3. SRS control module
4. Emergency fastening device (EFD)
• Both the driver's and front passenger's seat belt pre-tensioner system may be activated not only in certain frontal collisions but also in certain side collisions or rollovers, if the vehicle is equipped with a side or curtain air bag.

• Because the sensor that activates the SRS air bag is connected with the pre-tensioner seat belt, the SRS air bag warning light on the instrument panel will illuminate for approximately 6 seconds after the ignition switch has been turned to the ON position, and then it should turn off.

If the pre-tensioner seat belt system are not working properly, this warning light will illuminate even if there is no malfunction of the SRS air bag. If the SRS air bag warning light does not illuminate when the ignition switch is turned ON, or if it remains illuminated after illuminating for approximately 6 seconds, or if it illuminates while the vehicle is being driven, have an authorized Kia dealer inspect the pre-tensioner seat belt and SRS air bag system as soon as possible.

• Pre-tensioners are designed to operate only one time. After activation, pre-tensioner seat belts must be replaced. All seat belts, of any type, should always be replaced after they have been worn during a collision.

• Do not strike the pre-tensioner seat belt assemblies.

**WARNING - Skin irritation**

Wash all exposed skin areas thoroughly after an accident in which the pre-tensioner seat belts were activated. The fine dust from the pre-tensioner activation may cause skin irritation and should not be breathed for prolonged periods.

**WARNING - Hot pretensioner**

Do not touch the pre-tensioner seat belt assemblies for several minutes after they have been activated. When the pre-tensioner seat belt mechanism fires during a collision the pre-tensioner becomes hot and can burn you.

**NOTICE**

Do not attempt to service or repair the pre-tensioner seat belt system in any manner. Do not attempt to inspect or replace the pre-tensioner seat belts yourself. This must be done by an authorized Kia dealer.
Safety features of your vehicle

Seat belt precautions

**Infant or small child**

All 50 states have child restraint laws. You should be aware of the specific requirements in your state. Child and/or infant seats must be properly placed and installed in the rear seat. For more information about the use of these restraints, refer to “Child restraint system” in this section.

✽ NOTICE

Small children are best protected from injury in an accident when properly restrained in the rear seat by a child restraint system that meets the requirements of the Federal Motor Vehicle Safety Standards. Before buying any child restraint system, make sure that it has a label certifying that it meets Federal Motor Vehicle Safety Standard 213. The restraint must be appropriate for your child’s height and weight. Check the label on the child restraint for this information. Refer to “Child restraint system” in this section.

**Larger children**

Children who are too large for child restraint systems should always occupy the rear seat and use the available lap/shoulder belts. The lap portion should be fastened and snug on the hips and as low as possible. Check if the belt fits periodically. A child’s squirming could put the belt out of position. Children are given the most safety in the event of an accident when they are restrained by a proper restraint system in the rear seat. If a larger child (over age 12) must be seated in the front seat, the child should be securely restrained by the available lap/shoulder belt and the seat should be placed in the rear-most position. Children age 12 and under should be restrained securely in the rear seat. NEVER place a child age 12 and under in the front seat. NEVER place a rear facing child seat in the front seat of a vehicle.
If the shoulder belt portion slightly touches the child’s neck or face, try placing the child closer to the center of the vehicle. If the shoulder belt still touches their face or neck they need to be returned to a child restraint system.

**WARNING - Small children**
Do not allow small children to ride in the vehicle without an appropriate child restraint system. If the shoulder belt comes in contact with your child’s neck or face your child is too small to ride in the vehicle. In a crash the seat belt will inflict injury to your child’s neck, throat and face.

**Restraint of pregnant women**
Pregnant women should wear lap/shoulder belt assemblies whenever possible according to specific recommendations by their doctors. The lap portion of the belt should be worn AS SECURELY AND LOW AS POSSIBLE.

**WARNING - Pregnant women**
Pregnant women must never place the lap portion of the seat belt above or on the abdomen where the fetus is located. The force of the seat belt during a collision will crush the fetus.

**Injured person**
A seat belt should be used when an injured person is being transported. When this is necessary, you should consult a physician for recommendations.

**One person per belt**
Two people (including children) should never attempt to use a single seat belt. This could increase the severity of injuries in case of an accident.
**Safety features of your vehicle**

**Do not lie down**
To reduce the chance of injuries in the event of an accident and to achieve maximum effectiveness of the restraint system, all passengers should be sitting up and the front and rear seats should be in an upright position when the vehicle is moving. A seat belt cannot provide proper protection if the person is lying down in the rear seat or if the front and rear seats are in a reclined position.

**Care of seat belts**
Seat belt systems should never be disassembled or modified. In addition, care should be taken to assure that seat belts and belt hardware are not damaged by seat hinges, doors or other abuse.

**WARNING - Pinched seat belt**
Make sure that the webbing and/or buckle does not get caught or pinched in the rear seat when returning the rear seatback to its upright position. A caught or pinched webbing/buckle may become damaged and could fail during a collision or sudden stop.

**Periodic inspection**
All seat belts should be inspected periodically for wear or damage of any kind. Any damaged parts should be replaced as soon as possible.

**Keep belts clean and dry**
Seat belts should be kept clean and dry. If belts become dirty, they can be cleaned by using a mild soap solution and warm water. Bleach, dye, strong detergents or abrasives should not be used because they may damage and weaken the fabric.

**When to replace seat belts**
The entire in-use seat belt assembly or assemblies should be replaced if the vehicle has been involved in an accident. This should be done even if no damage is visible. Additional questions concerning seat belt operation should be directed to an authorized Kia dealer.
CHILD RESTRAINT SYSTEM (CRS)

Children Always in the Rear

Children under age 13 must always ride in the rear seats and must always be properly restrained to minimize the risk of injury in an accident, sudden stop or sudden maneuver. According to accident statistics, children are safer when properly restrained in the rear seats than in the front seat. Even with air bags, children can be seriously injured or killed. Children too large for a child restraint must use the seat belts provided.

All 50 states have child restraint laws which require children to travel in approved child restraint devices. The laws governing the age or height/weight restrictions at which seat belts can be used instead of child restraints differs among states, so you should be aware of the specific requirements in your state, and where you are travelling.

Child restraint systems must be properly placed and installed in the rear seat. You must use a commercially available child restraint system that meets the requirements of the Federal Motor Vehicle Safety Standards (FMVSS).

Child restraint systems are generally designed to be secured in a vehicle seat by lap belt portion of a lap/shoulder belt, or by a LATCH system in the rear seats of the vehicle.

⚠️ WARNING - Restraint Location
Never install a child or infant seat on the front passenger's seat. A child riding in the front passenger seat can be forcefully struck by an inflating airbag and seriously injured.

⚠️ WARNING - Hot Child Restraint
A child restraint system can become very hot if it is left in a closed vehicle on a sunny day. Be sure to check the seat cover, buckles and latches before placing a child in the restraint system.
Safety features of your vehicle

**Child restraint system (CRS)**
Infants and younger children must be restrained in an appropriate rear-facing or forward-facing CRS that has first been properly secured to the rear seat of the vehicle. Read and comply with the instructions for installation and use provided by the manufacturer of the child restraint.

**WARNING**
- **Child Restraint Installation**
  An improperly secured child restraint can increase the risk of serious injury or death in an accident. Always take the following precautions when using a child restraint system:
  - Always follow the child restraint system manufacturer’s instructions for installation and use.

(Continued)

- Always properly restrain your child in the child restraint.
- If the vehicle head restraint prevents proper installation of a child seat (as described in the child restraint system manual), the head restraint of the respective seating position shall be readjusted or entirely removed.
- Do not use an infant carrier or a child safety seat that "hooks" over a seatback, it may not provide adequate protection in an accident.
- After an accident, have a Kia dealer check the child restraint system, seat belts, tether anchors and lower anchors.

(Continued)

**Selecting a Child Restraint System (CRS)**
When selecting a CRS for your child, always:
- Make sure the CRS has a label certifying that it meets applicable Federal Motor Vehicle Safety Standards (FMVSS 213).
- Select a child restraint based on your child’s height and weight. The required label or the instructions for use typically provide this information.
- Select a child restraint that fits the vehicle seating position where it will be used.
- Read and comply with the warnings and instructions for installation and use provided with the child restraint system.
**Child restraint system types**

There are three main types of child restraint systems: rear-facing seats, forward-facing seats, and booster seats. They are classified according to the child’s age, height and weight.

---

**WARNING - Holding Children**

Never hold a child in your arms or lap when riding in a vehicle. The violent forces created during a crash will tear the child from your arms and throw the child against the car’s interior. Always use a child restraint system which is appropriate for your child’s height and weight.

**WARNING - Unattended Children**

Never leave children unattended in a vehicle. The car can heat up very quickly, resulting in injuries to the child in the vehicle.

**WARNING - Seat Belt Use**

Do not use one seat belt for two occupants at the same time. This will eliminate any safety benefit provided by the seat belt to the occupants.
Safety features of your vehicle

Rear-facing child seats
A rear-facing child seat provides restraint with the seating surface against the back of the child. The harness system holds the child in place, and in an accident, acts to keep the child positioned in the seat and reduces the stress to the neck and spinal cord.
All children under age one must always ride in a rear-facing infant child restraint.

Convertible and 3-in-1 child seats typically have higher height and weight limits for the rear-facing position, allowing you to keep your child rear-facing for a longer period of time. Continue to use a rear-facing child seat for as long as your child will fit within the height and weight limits allowed by the child seat manufacturer. It's the best way to keep them safe. Once your child has outgrown the rear-facing child restraint, your child is ready for a forward-facing child restraint with a harness.

Forward-facing child restraints
A forward-facing child seat provides restraint for the child's body with a harness. Keep children in a forward-facing child seat with a harness until they reach the top height or weight limit allowed by your child restraint's manufacturer.
Once your child outgrows the forward-facing child restraint, your child is ready for a booster seat.
Booster seats
A booster seat is a restraint designed to improve the fit of the vehicle's seat belt system. A booster seat positions the seat belt so that it fits properly over the lap of your child. Keep your child in a booster seat until they are big enough to sit in the seat without a booster and still have the seat belt fit properly. For a seat belt to fit properly, the lap belt must lie snugly across the upper thighs, not the stomach. The shoulder belt should lie snug across the shoulder and chest and not across the neck or face. Children under age 13 must always ride in the rear seats and must always be properly restrained to minimize the risk of injury.

Installing a Child Restraint System (CRS)
After selecting a proper child seat for your child, check to make sure it fits properly in your vehicle. Follow the instructions provided by the manufacturer when installing the child seat. Note these general steps when installing the seat to your vehicle:

- **Properly secure the child restraint to the vehicle.** All child restraints must be secured to the vehicle with the lap part of a lap/shoulder belt or with the LATCH system.
- **Make sure the child restraint is firmly secured.** After installing a child restraint to the vehicle, push and pull the seat forward and from side-to-side to verify that it is securely attached to the seat. A child restraint secured with a seat belt should be installed as firmly as possible. However, some side-to-side movement can be expected.

- **Secure the child in the child restraint.** Make sure the child is properly strapped in the child restraint according to the manufacturer instructions.
**Lower Anchors and Tether for Children (LATCH) System**

The LATCH system holds a child restraint during driving and in an accident. This system is designed to make installation of the child restraint easier and reduce the possibility of improperly installing your child restraint. The LATCH system uses anchors in the vehicle and attachments on the child restraint. The LATCH system eliminates the need to use seat belts to secure the child restraint to the rear seats.

Lower anchors are metal bars built into the vehicle. There are two lower anchors for each LATCH seating position that will accommodate a child restraint with lower attachments.

To use the LATCH system in your vehicle, you must have a child restraint with LATCH attachments.

The child seat manufacturer will provide you with instructions on how to use the child seat with its attachments for the LATCH lower anchors.

**WARNING - LATCH Lower Anchors**

Never attempt to attach a LATCH equipped seat in the center seating position. LATCH lower anchors are only to be used in the left and right rear outboard seating positions. You may damage the anchors or the anchors may fail and break in a collision.

LATCH anchors have been provided in the left and right outboard rear seating positions. Their locations are shown in the illustration. There are no LATCH anchors provided for the center rear seating position.
The lower anchor position indicator symbols are located on the left and right rear seat backs to identify the position of the lower anchors in your vehicle (see arrows in illustration).

The LATCH anchors are located between the seatback and the seat cushion of the rear seat left and right outboard seating positions.

To use the lower anchor, push the upper portion of the lower anchor cover.

(*) (1) : Lower Anchor position indicator
(2) : Lower Anchor

**Securing a child restraint with the LATCH anchors system**

To install a LATCH-compatible child restraint in either of the rear outboard seating positions:

1. Move the seat belt buckle away from the lower anchors.
2. Move any other objects away from the anchors that could prevent a secure connection between the child restraint and the lower anchors.
3. Place the child restraint on the vehicle seat, then attach the seat to the lower anchors according to the instructions provided by the child restraint manufacturer.
4. Follow the child restraint instructions for properly adjusting and tightening the lower attachments on the child restraint to the lower anchors.

**WARNING**

Take the following precautions when using the LATCH system:

- Read and follow all installation instructions provided with your child restraint system.
- To prevent the child from reaching and taking hold of unretracted seat belts, buckle all unused rear seat belts and retract the seat belt webbing behind the child. Children can be strangled if a shoulder belt becomes wrapped around their neck and the seat belt tightens.
- NEVER attach more than one child restraint to a single anchor. This could cause the anchor or attachment to come loose or break.
- Always have the LATCH system inspected by your authorized Kia dealer after an accident. An accident can damage the LATCH system and may not properly secure the child restraint.
NOTICE
The recommended maximum weight for the LATCH system is 65 lbs. (30 kg). When selecting a proper child restraint, consider that the maximum total weight of the child plus the child restraint should be less than 65 lbs (30 kg). As a guide, the MAX child restraint weight should be determined by the following calculation:
Child Restraint Weight = 65 - (child's total weight in lbs.)

Securing a child restraint seat with "Tether Anchor" system

First secure the child restraint with the LATCH lower anchors or the seat belt. If the child restraint manufacturer recommends that the top tether strap be attached, attach and tighten the top tether strap to the top tether strap anchor.
Child restraint system top tether anchorages are located on the back of the rear seatbacks.

WARNING
Take the following precautions when installing the tether strap:
• Read and follow all installation instructions provided with your child restraint system.
• NEVER attach more than one child restraint to a single tether anchor. This could cause the anchor or attachment to come loose or break.
• Do not attach the tether strap to anything other than the correct tether anchor. It may not work properly if attached to something else.
• Do not use the tether anchors for adult seat belts or harnesses, or for attaching other items or equipment to the vehicle.
• Always fasten the seatbelts behind the child restraint seat when they are not used to secure the child seat. Failure to do so may result in child strangulation.
To install the tether anchor:
1. Route the child restraint tether strap over the child restraint seatback. Route the tether strap under the head restraint and between the head restraint posts, or route the tether strap over the top of the vehicle seatback. Make sure the strap is not twisted.
2. Connect the tether strap hook to the tether anchor, then tighten the tether strap according to the child seat manufacturer’s instructions to firmly secure the child restraint to the seat.

3. Check that the child restraint is securely attached to the seat by pushing and pulling the seat forward and from side-to-side.

**Securing a child restraint with a lap belt or lap/shoulder belt**
When not using the LATCH system, all child restraints must be secured to a vehicle rear seat with the lap part of a lap/shoulder belt.

**Automatic locking mode**
Since all passenger seat belts move freely under normal conditions and only lock under extreme or emergency conditions (emergency locking mode), you must manually pull the seat belt all the way out to shift the retractor to the “Automatic Locking” mode to secure a child restraint.
The “Automatic Locking” mode will help prevent the normal movement of the child in the vehicle from causing the seat belt to loosen and compromise the child restraint system. To secure a child restraint system, use the following procedure.
To install a child restraint system on the rear seats, do the following:

1. Place the child restraint system on a rear seat and route the lap/shoulder belt around or through the child restraint, following the restraint manufacturer’s instructions. Be sure the seat belt webbing is not twisted.

2. Fasten the lap/shoulder belt latch into the buckle. Listen for the distinct "click" sound. Position the release button so that it is easy to access in case of an emergency.

3. Pull the shoulder portion of the seat belt all the way out. When the shoulder portion of the seat belt is fully extended, it will shift the retractor to the "Automatic Locking" (child restraint) mode.
4. Slowly allow the shoulder portion of the seat belt to retract and listen for an audible "clicking" or "ratcheting" sound. This indicates that the retractor is in the "Automatic Locking" mode. If no distinct sound is heard, repeat steps 3 and 4.

5. Remove as much slack from the belt as possible by pushing down on the child restraint system while feeding the shoulder belt back into the retractor.

6. Push and pull on the child restraint system to confirm that the seat belt is holding it firmly in place. If it is not, release the seat belt and repeat steps 2 through 6.

7. Double check that the retractor is in the "Automatic Locking" mode by attempting to pull more of the seat belt out of the retractor. If you cannot, the retractor is in the "Automatic Locking" mode.

If your CRS manufacturer instructs or recommends you to use a tether anchor with the lap/shoulder belt, refer to the previous pages for more information.

**NOTICE**

When the seat belt is allowed to retract to its fully stowed position, the retractor will automatically switch from the "Automatic Locking" mode to the emergency lock mode for normal adult usage.

**WARNING**

If the retractor is not in the "Automatic Locking" mode, the child restraint can move when your vehicle turns or stops suddenly. A child can be seriously injured or killed if the child restraint is not properly anchored in the car, including manually pulling the seat belt all the way out to shift the retractor to the "Automatic Locking" mode.

To remove the child restraint, press the release button on the buckle and then pull the lap/shoulder belt out of the restraint and allow the seat belt to retract fully.
(1) Driver's front air bag  
(2) Passenger's front air bag  
(3) Side air bag  
(4) Curtain air bag  

Even in vehicles with air bags, you and your passengers must always wear the safety belts provided in order to minimize the risk and severity of injury in the event of a collision or rollover.

* The actual air bags in the vehicle may differ from the illustration.
How does the air bag system operate

- Air bags are activated (able to inflate if necessary) only when the ignition switch is turned to the ON or START position.
- The appropriate air bags inflate instantly in the event of a serious frontal collision or side collision in order to help protect the occupants from serious physical injury.
- In normal conditions, the airbag is designed to deploy based on the angle and intensity of the collision. These two factors are crucial elements for deciding whether to transmit airbag deployment signal.
- The airbag will deploy based on angle and intensity of the collision. It will not deploy in every crash or collision situations.
- The front air bags will completely inflate and deflate in an instant. It is virtually impossible for you to see the air bags inflate during an accident. It is much more likely that you will simply see the deflated air bags hanging out of their storage compartments after the collision.
- In addition to inflating in serious side collisions, side and/or curtain air bags will inflate if the sensing system detects a rollover.
- When a rollover is detected, curtain air bags will remain inflated longer to help provide protection from ejection, especially when used in conjunction with the seat belts.
- In order to help provide protection, the air bags must inflate rapidly. The speed of the air bag inflation is a consequence of extremely short time in which to inflate the air bag between the occupant and the vehicle structures before the occupant impacts those structures. This speed of inflation reduces the risk of serious or life-threatening injuries and is thus a necessary part of the air bag design.

However, air bag inflation can also cause injuries which can include facial abrasions, bruises and broken bones because the inflation speed also causes the air bags to expand with a great deal of force.

- There are even circumstances under which contact with the steering wheel or passenger air bag can cause fatal injuries, especially if the occupant is positioned excessively close to the steering wheel or passenger air bag.
**Safety features of your vehicle**

**WARNING - Airbag inflation**
Sit as far back as possible from the steering wheel while still maintaining comfortable control of your vehicle. A distance of at least 10" from your chest to the steering wheel is recommended. Failure to do so can result in airbag inflation injuries to the driver.

---

**Noise and smoke**
When inflated, the air bags make a loud noise and leave smoke and powder in the air inside the vehicle. This is normal and is a result of the ignition of the air bag inflator. After the air bag inflates, you may feel substantial discomfort in breathing due to the contact of your chest with both the seat belt and the air bag, as well as from breathing the smoke and powder. Open your doors and/or windows as soon as possible after impact in order to reduce discomfort and prevent prolonged exposure to the smoke and powder.

Though smoke and powder are non-toxic, it may cause irritation to the skin (eyes, nose and throat, etc). If this is the case, wash and rinse with cold water immediately and consult a doctor if the symptom persists.

---

**WARNING - Hot components**
Do not touch the air bag storage area’s internal components immediately after airbag inflation. The air bag related parts in the steering wheel, instrument panel and the roof rails above the front and rear doors are very hot. Hot components can result in burn injuries.

---

**WARNING**
Do not install or place any accessories near air bag deployment areas, such as the instrument panel, windows, pillars, and roof rails. Such objects may become dangerous projectiles if the airbag inflates.
**Do not install a child restraint on the front passenger’s seat.**

Never place a rear-facing child restraint in the front passenger's seat. If the air bag deploys, it would impact the rear-facing child restraint, causing serious or fatal injury.

In addition, do not place front-facing child restraints in the front passenger’s seat. If the front passenger air bag inflates, it could cause serious or fatal injuries to the child.

**WARNING - Air bag deployment**

When children are seated in the rear outboard seats of a vehicle equipped with side and/or curtain air bags, install the child restraint system as far away from the door side as possible. Inflation of the side and/or curtain air bags could impact the child.

**Air bag warning light**

The purpose of air bag warning light in your instrument panel is to alert you of a potential problem with your air bag system, which could include your side and/or curtain air bags used for rollover protection.
When the ignition switch is turned ON, the warning light should illuminate for approximately 6 seconds, then go off. Have the system checked by an authorized Kia dealership if:
- The light does not turn on briefly when you turn the ignition ON.
- The light stays on after illuminating for approximately 6 seconds.
- The light comes on while the vehicle is in motion.
- The light blinks when the ignition switch is in ON position.

The SRS consists of the following components:
1. Driver's front air bag module
2. Passenger's front air bag module
3. Side air bag modules
4. Curtain air bag modules
5. Retractor pre-tensioner assemblies
6. Air bag warning light
7. SRS control module (SRSCM)/Rollover sensor
8. Front impact sensors
9. Side impact sensors
10. PASSENGER “AIR BAG OFF” indicator (Front passenger's seat only)
11. Occupant detection system (Front passenger's seat only)
12. Driver's and front passenger's seat belt buckle sensors
13. Emergency fastening device (EFD)
14. Side pressure impact sensor

The SRSCM continually monitors all SRS components while the ignition switch is ON to determine if a crash impact is severe enough to require air bag deployment or pre-tensioner seat belt deployment.
If the air bag warning light illuminated for more than 6 seconds after the ignition is turned on, or if it illuminates during vehicle operation, an SRS component may not be functioning properly and you should have your vehicle checked by an authorized Kia dealer.

If any of the following conditions occurs, this indicates a malfunction in the air bag system. Have an authorized Kia dealer inspect the air bag system as soon as possible.

- The light does not turn on briefly when you turn the ignition ON.
- The light stays on after illuminating for approximately 6 seconds.
- The light comes on while the vehicle is in motion.
- The light blinks when the ignition switch is in ON position.

The front air bag modules are located both in the center of the steering wheel and in the front passenger's panel above the glove box. When the SRSCM detects a sufficiently severe impact to the front of the vehicle, it will automatically deploy the front air bags.
Safety features of your vehicle

Upon deployment, tear seams molded directly into the pad covers will separate under pressure from the expansion of the air bags. Further opening of the covers then allows full inflation of the air bags.

A fully inflated air bag, in combination with a properly worn seat belt, slows the driver's or the passenger's forward motion, reducing the risk of head and chest injury.

After complete inflation, the air bag immediately starts deflating, enabling the driver to maintain forward visibility and the ability to steer or operate other controls.

**WARNING - Air bag obstructions**

Do not install or place any accessories on the steering wheel, instrument panel, or on the front passenger's panel above the glove box in a vehicle. Such objects may become dangerous projectiles if the air bag deploys.
If an air bag deploys, there may be a loud noise followed by a fine dust released in the vehicle. These conditions are normal and are not hazardous - the air bags are packed in this fine powder. The dust generated during air bag deployment may cause skin or eye irritation as well as aggravate asthma for some persons. Always wash all exposed skin areas thoroughly with cold water and a mild soap after an accident in which the air bags were deployed.

- The SRS can function only when the ignition switch is in the ON position. If the SRS air bag warning light does not illuminate, or continuously remains on after illuminating for about 6 seconds when the ignition switch is turned to the ON position, or after the engine is started, comes on while driving, the SRS is not working properly. If this occurs, have your vehicle immediately inspected by an authorized Kia dealer.

**NOTICE**

Before you replace a fuse or disconnect a battery terminal, turn the ignition switch to the LOCK position and remove the ignition switch. Never remove or replace the air bag related fuse(s) when the ignition switch is in the ON position. Failure to heed this warning will cause the SRS air bag warning light to illuminate.

Your vehicle is equipped with an occupant detection system in the front passenger's seat.

The occupant detection system is designed to detect the presence of a properly-seated front passenger and determine if the passenger's front air bag should be enabled (may inflate) or not. Only the front passenger front air bag is controlled by the Occupant Detection System.

Do not put anything in front of the passenger air bag indicator.
Safety features of your vehicle

Main components of the occupant detection system

- A detection device located within the front passenger seat cushion.
- An electronic system which determines whether the passenger air bag systems should be activated or deactivated.
- A indicator light located on the instrument panel which illuminates the words PASSENGER AIR BAG "OFF" indicating the front passenger air bag system is deactivated.
- The instrument panel air bag warning light is interconnected with the occupant detection system.

If the front passenger seat is occupied by a person that the system determines to be of appropriate size, and he/she sits properly (sitting upright with the seatback in an upright position, centered on the seat cushion with their seat belt on, legs comfortably extended and their feet on the floor), the PASSENGER AIR BAG “OFF” indicator will turn off and the front passenger's air bag will be able to inflate, if necessary, in frontal crashes.

You will find the PASSENGER AIR BAG “OFF” indicator on the center facia panel. This system detects the conditions 1–4 in the following table and activates or deactivates the front passenger air bag based on these conditions.

Always be sure that you and all vehicle occupants are seated and restrained properly (sitting upright with the seat in an upright position, centered on the seat cushion, with the person’s legs comfortably extended, feet on the floor, and wearing the safety belt properly) for the most effective protection by the air bag and the safety belt.

- The ODS (Occupant Detection System) may not function properly if the passenger takes actions which can defeat the detection system. These include:
  1. Failing to sit in an upright position.
  2. Leaning against the door or center console.
  3. Sitting towards the sides or the front of the seat.
  4. Putting legs on the dashboard or resting them on other locations which reduce the passenger weight on the front seat.
  5. Improperly wearing the safety belt.
  6. Reclining the seat back.
  7. Wearing a thick cloth like ski wear or hip protection wear.
  8. Placing on the seat an additional thick cushion.
**Condition and operation in the front passenger occupant detection system**

</tr>
</tbody>
</table>

*1: The ODS system uses a field to evaluate a person's size to determine whether the air bag should deploy. It is possible for a child to be detected and activate the ODS, thus allowing the air bag to deploy. To maximize safety, do not allow children to ride in the front passenger seat.

*2: Never install a child restraint system on the front passenger seat.

**NOTICE**

Do not modify or replace the front passenger seat. Don't place anything on or attach anything such as a blanket, front seat cover or after market seat heater to the front passenger seat. This can adversely affect the occupant detection system.

---

**WARNING - ODS System**

Riding in an improper position adversely affects the Occupant Detection System and may result in the deactivation of the front passenger airbag. It is important for the driver to instruct the passenger as to the proper seating instructions as contained in this manual.

- Do not place heavy loads in the front passenger seatback pocket or on the front passenger seat.
- Do not place feet on the front passenger seatback.

- Never excessively recline the front passenger seatback.

- Never sit with hips shifted towards the front of the seat.

- Never place feet on the dashboard.

- Never lean on the door or center console.

- Never sit on one side of the front passenger seat.
- Do not use car seat accessories such as thick blankets and cushions which cover up the car seat surface.

(Continued)

- Do not put an electronic device (ex. Laptop computer, aftermarket DMB, navigation, satellite audio, video game machine, MP3, AC inverter, etc.) in the front passenger seatback pocket or on the front passenger seat.

(Continued)

- Wet Passenger Seat:
  Do not spill liquid in the passenger seat. Spilled liquid on the passenger seat may cause the air bag warning light to illuminate or malfunction. If any liquid is spilled, make sure the seat has been completely dried before driving the vehicle.

(Continued)
When an adult is seated in the front passenger seat, if the PASSENGER AIR BAG “OFF” indicator is on, turn the ignition switch to the LOCK position and ask the passenger to sit properly (sitting upright with the seat back in an upright position, centered on the seat cushion with their seat belt on, legs comfortably extended and their feet on the floor). Restart the engine and have the person remain in that position. This will allow the system to detect the person and to enable the passenger air bag.

If the PASSENGER AIR BAG “OFF” indicator is still on, ask the passenger to move to the rear seat.

**WARNING - “AIR BAG OFF” light**

Do not allow an adult passenger to ride in the front seat when the PASSENGER AIR BAG “OFF” indicator is illuminated, because the air bag will not deploy in the event of a crash. The driver must instruct the passenger to reposition himself in the seat. Failure to properly position yourself may lead to air bag deactivation resulting in air bag non-deployment in a collision. If the PASSENGER AIR BAG “OFF” indicator remains illuminated after the passenger repositions themselves properly and the car is restarted, it is recommended that passenger move to the rear seat because the passenger’s front air bag will not deploy.
**NOTICE**
The PASSENGER AIR BAG “OFF” indicator illuminates for about 4 seconds after the ignition switch is turned to the ON position or after the engine is started. If the front passenger seat is occupied, the occupant detection sensor will then classify the front passenger after several more seconds.

**NOTICE**
Air bags can only be used once - have an authorized Kia dealer replace the air bag immediately after deployment.

Any child age 12 and under should ride in the rear seat. Children too large for child restraints should use the available lap/shoulder belts. No matter what type of crash, children of all ages are safer when restrained in the rear seat.

**NOTICE**
Do not modify or replace the front passenger seat. Don’t place anything on or attach anything such as a blanket, front seat covers or after market seat heater to the front passenger seat. This can adversely affect the occupant detection system.

If the occupant detection system is not working properly, the SRS air bag warning light on the instrument panel will illuminate because the passenger's front air bag is connected with the occupant detection system. If there is a malfunction of the occupant detection system, the PASSENGER AIR BAG “OFF” indicator will not illuminate and the passenger's front air bag will inflate in frontal impact crashes even if there is no occupant in the front passenger's seat.
Safety features of your vehicle

Driver’s and passenger’s front air bag

Your vehicle is equipped with an Advanced Supplemental Restraint (Air Bag) System and lap/shoulder belts at both the driver and passenger seating position.

The indication of the system's presence are the letters "AIR BAG" embossed on the air bag pad cover on the steering wheel and the passenger's side front panel pad above the glove box.

The SRS consists of air bags installed under the pad covers in the center of the steering wheel and the passenger's side front panel above the glove box.

The purpose of the SRS is to provide the vehicle's driver and/or the front passenger with additional protection than that offered by the seat belt system alone in case of a frontal impact of sufficient severity. The SRS uses sensors to gather information about the driver's and front passenger's seat belt usage and impact severity. The seat belt buckle sensors determine if the driver and front passenger's seat belts are fastened.

CAUTION - Seat Track Sensor

Do not place any objects underneath the front seats as they could damage the seat track position sensor or interfere with the occupant detection system.

WARNING - Modification

Modification to the seat structure can cause the air bag to deploy at a different level than should be provided.
Safety features of your vehicle

These sensors provide the ability to control the SRS deployment based on whether or not the seat belts are fastened, and how severe the impact is.

The advanced SRS offers the ability to control the air bag inflation with two levels. A first stage level is provided for moderate-severity impacts. A second stage level is provided for more severe impacts.

The passenger’s front air bag is designed to help reduce the injury of children sitting close to the instrument panel in low speed collisions. However, children are safer if they are restrained in the rear seat.

According to the impact severity and seat belt usage, the SRSCM (SRS Control Module) controls the air bag inflation. Failure to properly wear seat belts can increase the risk or severity of injury in an accident.

Additionally, your vehicle is equipped with an occupant detection system in the front passenger’s seat. The occupant detection system detects the presence of a passenger in the front passenger’s seat and will turn off the front passenger’s air bag under certain conditions. For more detail, see "Occupant detection system" in this section.

Modification to the seat structure can cause the air bag to deploy at a different level than should be provided.

Manufacturers are required by government regulations to provide a contact point concerning modifications to the vehicle for persons with disabilities, which modifications may affect the vehicle’s advanced air bag system. That contact is Kia’s toll-free Customer Assistance center at 1-800-333-4Kia. However, Kia does not endorse nor will it support any changes to any part or structure of the vehicle that could affect the advanced air bag system, including the occupant detection system.

**WARNING - Replacement / Modifications**

The front passenger seat, dashboard or door should not be replaced except by an authorized Kia dealer using original Kia parts designed for this vehicle and model. Any other such replacement or modification could adversely affect the operation of the occupant detection system and your advanced air bags.
Safety features of your vehicle

Advanced air bags are combined with pre-tensioner seat belts to help provide enhanced occupant protection in frontal crashes. Front air bags are not intended to deploy in collisions in which sufficient protection can be provided by the pre-tensioner seat belt.

**WARNING - SRS Wiring**

Do not tamper with or disconnect SRS wiring or other components of the SRS system. Doing so could result in injury, due to accidental deployment of the air bags or by rendering the SRS inoperative.

Front air bags are not intended to deploy in side-impact, rear-impact or rollover crashes. In addition, front air bags will not deploy in frontal crashes below the deployment threshold.

**WARNING - No attaching objects**

No objects (such as crash pad cover, cellular phone holder, cup holder, perfume or stickers) should be placed over or near the air bag modules on the steering wheel, instrument panel, windshield glass, and the front passenger's panel above the glove box. Such objects could cause harm if the vehicle is in a crash severe enough to cause the air bags to deploy.
Side air bag

Your vehicle is equipped with a side air bag in each front seat. The purpose of the air bag is to provide the vehicle's driver and/or the front passenger with additional protection than that offered by the seat belt alone.

- The side air bags are designed to deploy during certain side-impact collisions, depending on the crash severity, angle, speed and point of impact.
- The side and/or curtain air bags do not only deploy on the side of the impact but also on the opposite side.
- The side and/or curtain air bags on both sides of the vehicle will deploy if a rollover or possible rollover is detected.
- The side air bags are not designed to deploy in all side impact or rollover situations.

⚠️ WARNING - Unexpected deployment
Avoid impact to the side impact airbag sensor when the ignition switch is ON to prevent unexpected deployment of the side impact airbag.

* The actual air bags in the vehicle may differ from the illustration.
The side air bag is supplemental to the driver's and the passenger's seat belt systems and is not a substitute for them. Therefore your seat belts must be worn at all times while the vehicle is in operation.

For best protection from the side air bag system and to avoid being injured by the deploying side air bag, both front seat occupants should sit in an upright position with the seat belt properly fastened. The driver's hands should be placed on the steering wheel at the 9:00 and 3:00 positions. The passenger's arms and hands should be placed on their laps.

- If seat or seat cover is damaged, have the vehicle checked and repaired by an authorized Kia dealer. Inform the dealer that your vehicle is equipped with side air bags and an occupant detection system.

- Do not install any accessories including seat covers, on the side or near the side impact air bag as this may affect the deployment of the side air bags.

- Do not place any objects (an umbrella, bag, etc.) between the front door and the front seat. Such objects may become dangerous projectiles if the side airbag inflates.

- Do not place any objects over the air bag or between the air bag and yourself. Also, do not attach any objects around the area the air bag inflates such as the door, side door glass, front and rear pillar.

- Do not put any objects between the side airbag label and seat cushion. It could cause harm if the vehicle is in a crash severe enough to cause the air bags to deploy.

- Never place or insert any object into any small opening near side airbag labels attached to the vehicle seats. When the air bag deploys, the object may affect the deployment and result in unexpected accident or bodily harm.

- Do not install any accessories on the side or near the side air bags.
Curtain air bag

They are designed to help protect occupants in certain side impacts and to help prevent them from ejecting out of the vehicle as a result of a rollover, especially when the seatbelts are also in use. The curtain air bags are designed to deploy during certain side impact collisions, depending on the crash severity, angle, speed and point of impact. The side and/or curtain air bags do not only deploy on the side of the impact but also on the opposite side. Also, the curtain air bags on both sides of the vehicle will deploy in certain rollover situations. The curtain air bags are not designed to deploy in all side impact or rollover situations. Do not allow the passengers to lean their heads or bodies against the doors, put their arms on the doors, stretch their arms out of the window or place objects between the doors and passengers when they are seated on seats equipped with side impact and/or curtain air bags.

NOTICE
Never try to open or repair any components of the side and curtain air bag system. This should only be done by an authorized Kia dealer.

WARNING - No attaching objects
- Do not place any objects over the air bag. Also, do not attach any objects around the area the air bag inflates such as the door, side door glass, front and rear pillar, roof side rail.
- Do not hang hard or breakable objects on the clothes hanger.

※ The actual air bags in the vehicle may differ from the illustration.

Curtain air bags are located along both sides of the roof rails above the front and rear doors.
Why didn’t my air bag go off in a collision? (Inflation and non-inflation conditions of the air bag)
There are many types of accidents in which the air bag would not be expected to provide additional protection.
These include rear impacts, second or third collisions in multiple impact accidents, as well as low speed impacts.

Air bag collision sensors

(1) SRS control module/Rollover sensor
(2) Front impact sensor
(3) Side impact sensor
(4) Side pressure sensor

※ The actual air bag collision sensors in the vehicle may differ from the illustration.
WARNING - Air bag sensors

- Do not hit or allow any objects to impact the locations where air bags or sensors are installed. This may cause unexpected air bag deployment, which could result in serious personal injury or death.
- If the installation location or angle of the sensors is altered in any way, the air bags may deploy when they should not or they may not deploy when they should. Therefore, do not try to perform maintenance on or around the air bag sensors. Have the vehicle checked and repaired by an authorized Kia dealer.

- Problems may arise if the sensor installation angles are changed due to the deformation of the front bumper, front end module, body or front doors and/or B pillar where side collision sensors are installed. Have the vehicle checked and repaired by an authorized Kia dealer.
- Installing bumper guards (or side step or running board) or replacing a bumper (or front door module) with non-genuine parts may adversely affect your vehicle's collision and air bag deployment performance.

Air bag inflation conditions

Front air bags
Front air bags are designed to inflate in a frontal collision depending on the speed or angles of the impact of the front collision.
Side air bags (side and/or curtain air bags) are designed to inflate when an impact is detected by side collision sensors depending on the strength, speed or angles of impact resulting from a side impact collision. Also, the side and curtain air bags are designed to inflate when a rollover is detected by a rollover sensor.

Although the front air bags (driver's and front passenger's air bags) are designed to inflate in frontal collisions, they also may inflate in other types of collisions if the front impact sensors detect a sufficient frontal force in another type of impact. Side and curtain air bags are designed to inflate in certain side impact collisions. They may inflate in other types of collisions where a side force is detected by the sensors. Side air bag and/or curtain air bags may also inflate where rollover sensors indicate the possibility of a rollover occurring (even if none actually occurs) or in other situations, including when the vehicle is tilted while being towed.

Even where side and/or curtain air bags would not provide impact protection in a rollover, however, they will deploy to prevent ejection of occupants, especially those who are restrained with seat belts.

If the vehicle chassis is impacted by bumps or objects on unimproved roads, the air bags may deploy. Drive carefully on unimproved roads or on surfaces not designed for vehicle traffic to prevent unintended air bag deployment.

* The actual air bags in the vehicle may differ from the illustration.

**Side and/or curtain air bags**
Air bag non-inflation conditions

- In certain low-speed collisions the air bags may not deploy. The air bags are designed not to deploy in such cases because they may not provide benefits beyond the protection of the seat belts in such collisions.

- Air bags are not designed to inflate in rear collisions, because occupants are moved backward by the force of the impact. In this case, inflated air bags would not be able to provide any additional benefit.

- Front air bags may not inflate in side impact collisions, because occupants move to the direction of the collision, and thus in side impacts, frontal air bag deployment would not provide additional occupant protection.
• In an angled collision, the force of impact may direct the occupants in a direction where the air bags would not be able to provide any additional benefit, and thus the sensors may not deploy any air bags.

• Just before impact, drivers often brake heavily. Such heavy braking lowers the front portion of the vehicle causing it to “ride” under a vehicle with a higher ground clearance. Air bags may not inflate in this "under-ride" situation because deceleration forces that are detected by sensors may be significantly reduced by such “under-ride” collisions.

• Front air bags may not inflate in all rollover accidents where the SRSCM indicates that the front air bag deployment would not provide additional occupant protection.
Safety features of your vehicle

• Air bags may not inflate if the vehicle collides with objects such as utility poles or trees, where the point of impact is concentrated to one area and the full force of the impact is not delivered to the sensors.

SRS Care
The SRS is virtually maintenance-free and so there are no parts you can safely service by yourself. If the SRS air bag warning light does not illuminate, or continuously remains on, have your vehicle immediately inspected by an authorized Kia dealer.

Any work on the SRS system, such as removing, installing, repairing, or any work on the steering wheel, the front passenger's panel, front seats and roof rails must be performed by an authorized Kia dealer. Improper handling of the SRS system may result in serious personal injury.

For cleaning the air bag pad covers, use only a soft, dry cloth or one which has been moistened with plain water. Solvents or cleaners could adversely affect the air bag covers and proper deployment of the system.

If components of the air bag system must be discarded, or if the vehicle must be scrapped, certain safety precautions must be observed. An authorized Kia dealer knows these precautions and can give you the necessary information. Failure to follow these precautions and procedures could increase the risk of personal injury.
Adding equipment to or modifying your air bag-equipped vehicle

If you modify your vehicle by changing your vehicle’s frame, bumper system, front end or side sheet metal or ride height, this may affect the operation of your vehicle’s air bag system.

WARNING - Tampering with SRS

Do not tamper with or disconnect SRS wiring, or other components of the SRS system. Doing so could result in the accidental inflation of the air bags or render the SRS inoperative.

WARNING - Towing Vehicle

Always have the ignition off when your vehicle is being towed. The side air bags may inflate if the vehicle is tilted such as when being towed because of the rollover sensors in the vehicle.

Air bag warning label

Air bag warning labels, some required by the U.S. National Highway Traffic Safety Administration (NHTSA), are attached to the sunvisor to alert the driver and passengers of potential risks of the air bag system.

Features of your vehicle

KEY

Record your key number

The key code number is stamped on the key code tag attached to the key set. Should you lose your keys, this number will enable an authorized Kia dealer to duplicate the keys easily. Remove the key code tag and store it in a safe place. Also, record the key code number and keep it in a safe and handy place, but not in the vehicle.

Key operations

- Used to start the engine.
- Used to lock and unlock the doors.

- To unfold the key, press the release button (1) then the key will unfold automatically. To fold the key, fold the key manually while pressing the release button (1).

⚠️ CAUTION

Do not fold the key without pressing the release button. This may damage the key.

⚠️ WARNING - Aftermarket key

Use only Kia original parts for the ignition key in your vehicle. If an aftermarket key is used, the ignition switch may not return to ON after START. If this happens, the starter will continue to operate causing damage to the starter motor and possible fire due to excessive current in the wiring.
Door Lock (1)

1. Close all doors, engine hood and liftgate.
2. Press the lock button (1).
3. All doors and liftgate will lock. The hazard warning lights will blink once.
4. If the lock button is pressed once more within 4 seconds, the hazard warning lights will blink and the horn will sound once.
5. Make sure that doors are locked by checking the door lock button inside or pulling the outside door handle.

Door Unlock (2)

1. Press the unlock button (2).
2. The driver's door will unlock. The hazard warning lights will blink two times.
3. Press the unlock button (2) twice within 4 seconds and all doors and liftgate will unlock. The hazard warning lights will blink two times.

**NOTICE**

You can activate or deactivate the Two Turn Unlock function. Refer to “User settings” in this chapter.
**Liftgate unlock (3)**
The liftgate is unlocked if the button is pressed for more than 1 second. Also, once the liftgate is opened and then closed, the liftgate will be locked automatically.

**Panic (4)**
The horn sounds and hazard warning lights flash for about 30 seconds if this button is pressed for more than 1 second. To stop the horn and lights, press any button except the trunk button on the transmitter.

**Transmitter precautions**
- The transmitter will not work if any of the following occur:
  - The ignition key is in the ignition switch.
  - You exceed the operating distance limit (about 30 feet [10 m]).
  - The battery in the transmitter is weak.
  - Other vehicles or objects may be blocking the signal.
  - The weather is extremely cold.
  - The transmitter is close to a radio transmitter such as a radio sub-station or an airport which can interfere with normal operation of the transmitter.
- When the transmitter does not work correctly, open and close the door with the ignition key. If you have a problem with the transmitter, contact an authorized Kia dealer.
- If the transmitter is in close proximity to your mobile phone, the signal could be blocked by your mobile phones normal operational signals. This is especially important when the phone is active such as making and receiving calls, text messaging, and/or sending/receiving emails. Avoid placing the transmitter and your mobile phone in the same pants or jacket pocket and always try to maintain an adequate distance between the two devices.
Features of your vehicle

NOTICE

If the keyless entry system is inoperative due to exposure to water or liquids, it will not be covered by your manufacturer's vehicle warranty.

CAUTION

Keep the transmitter away from water or any liquid as it can become damaged and not function properly.

Battery replacement

The transmitter uses a 3 volt lithium battery which will normally last for several years. When replacement is necessary, use the following procedure.

1. Insert a slim tool into the slot and gently pry open the transmitter center cover.
2. Replace the battery with a new battery (CR2032). When replacing the battery, make sure the battery is positioned battery.
3. Install the battery in the reverse order of removal.

For replacement transmitters, see an authorized Kia dealer for transmitter reprogramming.

- The transmitter is designed to give you years of trouble-free use, however it can malfunction if exposed to moisture or static electricity. If you are unsure how to use your transmitter or replace the battery, contact an authorized Kia dealer.
- Using the wrong battery can cause the transmitter to malfunction. Be sure to use the correct battery.
- To avoid damaging the transmitter, don't drop it, get it wet, or expose it to heat or sunlight.
- An inappropriately disposed battery can be harmful to the environment and may cause human health. Dispose the battery according to your local law(s) or regulation.
Immobilizer system (if equipped)

Your vehicle is equipped with an electronic engine immobilizer system to reduce the risk of unauthorized vehicle use.

Your immobilizer system is comprised of a small transponder in the ignition key and electronic devices inside the vehicle.

With the immobilizer system, whenever you insert your ignition key into the ignition switch and turn it to ON, it checks and determines and verifies if the ignition key is valid.

If the key is determined to be valid, the engine will start.

If the key is determined to be invalid, the engine will not start.

To activate the immobilizer system:

Turn the ignition key to the OFF position. The immobilizer system activates automatically. Without a valid ignition key for your vehicle, the engine will not start.

To deactivate the immobilizer system:

Insert the ignition key into the key cylinder and turn it to the ON position. In order to prevent theft of your vehicle, do not leave spare keys anywhere in your vehicle. Your Immobilizer password is a customer unique password and should be kept confidential. Do not leave this number anywhere in your vehicle.

CAUTION - Transmitter damage

Do not drop, wet or expose the keyless entry system transmitter to heat or sunlight or it will be damaged.
NOTICE
When starting the engine, do not use the key with other immobilizer keys around. Otherwise the engine may not start or may stop soon after it starts. Keep each key separate in order to avoid a starting malfunction.

Do not put metal accessories near the ignition switch. Metal accessories may interrupt the transponder signal and may prevent the engine from being started.

NOTICE
If you need additional keys or lose your keys, contact an authorized Kia dealer.

Notices:

- CAUTION - Immobilizer damage
  Do not expose your immobilizer system to moisture, static electricity and rough handling. This may damage your immobilizer.

- CAUTION - Immobilizer alterations
  Do not change, alter or adjust the immobilizer system because it could cause the immobilizer system to malfunction.

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

NOTICE
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment. If the keyless entry system is inoperative due to changes or modifications not approved by the party responsible for compliance, it will not be covered by your manufacturer’s vehicle warranty.
SMART KEY (IF EQUIPPED)

Record your key number

The key code number is stamped on the key code tag attached to the key set. Should you lose your keys, this number will enable an authorized Kia dealer to duplicate the keys easily. Remove the key code tag and store it in a safe place. Also, record the key code number and keep it in a safe and handy place, but not in the vehicle.

WARNING - Smart key
Never leave the smart key in your vehicle with unsupervised children. Leaving children unattended in a vehicle with a smart key is dangerous. Children copy adults and they could press the start button. The key would enable children to operate power windows or other controls, or even make the vehicle move, which could result in serious bodily injury or death.

Smart key function

To remove the mechanical key, press and hold the release button(1) and remove the mechanical key (2). To reinstall the mechanical key, put the key into the hole and push it until a click sound is heard.

With a smart key, you can lock or unlock a door (and Liftgate) and start the engine. Refer to the following for more details.

Door Lock

Using the door handle button
1. Carry the smart key.
2. Close all doors, engine hood and liftgate.
3. Press the button of the outside door handle.
4. The hazard warning lights will blink and the chime will sound once.
5. Make sure that doors are locked by pulling the outside door handle.
The button will only operate when the smart key is within 28~40 in. (0.7~1m) from the outside door handle.

Even though you press the outside door handle button, the doors will not lock and the chime will sound for 3 seconds if any of following occur:
- The smart key is in the vehicle.
- The engine start/stop button is in ACC or ON position.
- Any door except the liftgate is open.

Unlocking

Using the door handle button
1. Carry the smart key.
2. Press the button of the driver's outside door handle.
3. The driver's door will unlock. The hazard warning lights will blink and the chime will sound two times.
4. Press the button twice within 4 seconds and all doors and the liftgate will unlock and the hazard warning lights will blink and the chime will sound two times.

- The button will only operate when the smart key is within 28~40 in. (0.7~1m) from the outside door handle.
- When the smart key is recognized in the area of 28~40 in. (0.7~1m) from the front outside door handle, other people can also open the doors.
- After unlocking the driver's door or all doors, the door(s) will lock automatically unless the door is opened.
Features of your vehicle

Using the button on the smart key

1. Press the unlock button (2) of the smart key.
2. The driver’s door will unlock. The hazard warning lights will blink and the chime will sound two times.
3. Press the unlock button (2) twice within 4 seconds and all doors and the liftgate will unlock. The hazard warning lights will blink and the chime will sound two times.

✽ NOTICE
After pressing the button, the doors will lock automatically unless any door is opened within 30 seconds.

✽ NOTICE
You can activate or deactivate the Two Turn Unlock function. Refer to “User settings” in this chapter.

Liftgate unlocking

Using the liftgate handle button

1. Carry the smart key.
2. Press the liftgate handle button.
3. When all doors are locked, the hazard warning lights will blink two times.
   Once the liftgate is opened and then closed, the liftgate will lock automatically.

If you are within 28~40 in. (0.7~1 m) from the outside liftgate handle, with your smart key in possession, the liftgate will unlock and open when you press the liftgate handle switch.

Using the button on the smart key

1. Press the liftgate unlock button (3) for more than 1 second.
2. When all doors are locked, the hazard warning lights will blink two times.

Panic

1. Press the panic button (4) for more than 1 second.
2. The horn sounds and hazard warning light flash for about 30 seconds.

Start-up

You can start the engine without inserting the key.

✽ For detailed information refer to the “Engine start/stop button” in chapter 6.
Loss of the smart key
A maximum of 2 smart keys can be registered to a single vehicle. If you happen to lose your smart key, you will not be able to start the engine. You should immediately take the vehicle and remaining key to your authorized Kia dealer (tow the vehicle, if necessary) to protect it from potential theft.

Smart key precautions
• The smart key will not work if any of the following occur:
  - The smart key is close to a radio transmitter such as a radio station or an airport which can interfere with normal operation of the smart key.
  - The smart key is near a mobile two way radio system or a cellular phone.
  - Another vehicle’s smart key is being operated close to your vehicle.
• When the smart key does not work correctly, open and close the door with the mechanical key and contact an authorized Kia dealer.

• If the smart key is in close proximity to your cell phone or smart phone, the signal from the smart key could be blocked by normal operation of your cell phone or smart phone. This is especially important when the phone is active such as making a call, receiving calls, text messaging, and/or sending/receiving emails. Avoid placing the smart key and your cell phone or smart phone in the same pants or jacket pocket and maintain adequate distance between the two devices.

NOTICE
If the keyless entry system is inoperative due to exposure to water or liquids, it will not be covered by your manufacturer’s vehicle warranty.

CAUTION
Keep the smart key away from water or any liquid as it can become damaged and not function properly.

NOTICE
Features of your vehicle

**Smart key immobilizer system**

Your vehicle is equipped with an electronic engine immobilizer system to reduce the risk of unauthorized vehicle use.

Your immobilizer system is comprised of a small transponder in the smart key and electronic devices inside the vehicle.

With the immobilizer system, whenever you turn the engine start/stop button to the ON position by pressing the button while carrying the smart key, it checks and determines if the smart key is valid or not.

If the key is determined to be valid, the engine will start.

If the key is determined to be invalid, the engine will not start.

**To deactivate the immobilizer system:**

Turn the engine start/stop button to the ON position by pressing the button while carrying the smart key.

**To activate the immobilizer system:**

Turn the engine start/stop button to the OFF position. The immobilizer system activates automatically.

Without a valid smart key for your vehicle, the engine will not start.

In order to prevent theft of your vehicle, do not leave spare keys anywhere in your vehicle. Your Immobilizer password is a customer unique password and should be kept confidential. Do not leave this number anywhere in your vehicle.

**NOTICE**

When starting the engine, do not use the key with other immobilizer keys around. Otherwise the engine may not start or may stop soon after it starts. Keep each key separate in order to avoid a starting malfunction.

Do not put metal accessories near the smart key.

The engine may not start because the metal accessories may interrupt the transponder signal from transmitting normally.

**NOTICE**

If you need additional keys or lose your keys, contact an authorized Kia dealer.

**CAUTION - Immobilizer damage**

Do not expose your immobilizer system to moisture, static electricity and rough handling. This may damage your immobilizer.

**CAUTION - Immobilizer alterations**

Do not change, alter or adjust the immobilizer system because it could cause the immobilizer system to malfunction.
This device complies with Part 15 of the FCC rules.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

✽ NOTICE
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment. If the keyless entry system is inoperative due to changes or modifications not expressly approved by the party responsible for compliance, it will not be covered by your manufacturer’s vehicle warranty.

Battery replacement

A smart key battery should last for several years, but if the smart key is not working properly, try replacing the battery with a new one. If you are unsure how to use your smart key or replace the battery, contact an authorized Kia dealer.
1. Remove the mechanical key.
2. Pry open the rear cover.
3. Replace the battery with a new battery (CR2032). When replacing the battery, make sure the battery position.
4. Install the battery in the reverse order of removal.

- The smart key is designed to give you years of trouble-free use, however it can malfunction if exposed to moisture or static electricity. If you are unsure how to use or replace the battery, contact an authorized Kia dealer.
- Using the wrong battery can cause the smart key to malfunction. Be sure to use the correct battery.
- To avoid damaging the smart key, don’t drop it, get it wet, or expose it to heat or sunlight.
- An inappropriately disposed battery can be harmful to the environment and human health. Dispose the battery according to your local law(s) or regulation.

⚠️ CAUTION - Smart key damage
Do not drop, get wet or expose the smart key to heat or sunlight, or it will be damaged.
DOOR LOCKS

Operating door locks from outside the vehicle

- Turn the key clockwise to lock and counterclockwise to unlock.
- If you lock the driver's door with a key
  - All vehicle doors will lock automatically. (for normal key)
  - Only the driver's door will lock. (for folding key, smart key)

- From the driver's door
  - Turn the key to the left once to unlock the door and once more within 4 seconds to unlock all doors. (for normal key).
  - Turn the key to the left once to unlock the driver's door. (for folding key, smart key).
- Doors can also be locked and unlocked with the transmitter.
- Once the doors are unlocked, they may be opened by pulling the door handle.
- When closing the door, push the door by hand. Make sure the doors are closed securely.

**NOTICE**

- In cold and wet climates, door lock and door mechanisms may not work properly due to freezing conditions.
- If the door is locked/unlocked multiple times in rapid succession with either the vehicle key or door lock switch, the system may stop operating temporarily in order to protect the circuit and prevent damage to system components.

**WARNING**

- Securely close your door before you begin driving. Failure to fully close your door may cause it to open during vehicle operation.
- Keep your body out of the way of the closing door to prevent injuries.

**WARNING**

If people must spend a longer time in the vehicle while it is very hot or cold outside, there is risk of injuries or danger to life. Do not lock the vehicle from the outside when there are people in it.

**CAUTION**

*Do not open and close the door repeatedly if unnecessary or with excessive force. Such action can damage the vehicle door.*
Features of your vehicle

Operating door locks from inside the vehicle

With the door lock button

- To lock a door without the key, push the inside door lock button (1) or central door lock switch (2) to the “Lock” position and close the door (3).
- If you lock the door with the central door lock switch (2), all vehicle doors will lock automatically.

*NOTICE*

Always remove the ignition key, engage the parking brake, close all windows and lock all doors when leaving your vehicle unattended.

- To open a door, pull the door handle (3) outward.
- If the inner door handle of the driver’s (or front passenger’s) door is pulled when the door lock button is in the lock position, the button will unlock and the door will open. (if equipped)
- Front doors cannot be locked if the ignition key is in the ignition switch and any front door is opened.

- To unlock a door, push the door lock button (1) to the “Unlock (B)” position. The red mark (2) on the button will be visible.
- To lock a door, push the door lock button (1) to the “Lock (A)” position. If the door is locked properly, the red mark (2) on the door lock button will not be visible.
If a power door lock ever fails to function while you are in the vehicle, try one or more of the following techniques to exit:

- Operate the door unlock feature repeatedly (both electronic and manual) while simultaneously pulling on the door handle.
- Operate the other door locks and handles, front and rear.
- Lower a front window and use the key to unlock the door from outside.
- Move to the cargo area and open the liftgate.

**WARNING**
Do not attempt to check the vehicle door operation while the vehicle is moving. Inadvertent opening of either doors while the vehicle is in operation could result in vehicle occupants falling out of the vehicle.

**WARNING - Doors**
- The doors should always be fully closed and locked while the vehicle is in motion to prevent accidental opening of the door.
- Be careful when opening doors and watch for vehicles, motorcycles, bicycles or pedestrians approaching the vehicle in the path of the door. Opening a door when something is approaching can cause damage or injury.

---

**With central door lock switch**

Operate by pressing the central door lock switch.
- When pressing the front portion (1) of the switch, all vehicle doors will lock.
- When pressing the rear portion (2) of the switch, all vehicle doors will unlock.
- If the key is in the ignition switch and any front door is opened, the doors will not lock even though the front portion (1) of the central door lock switch is pressed.
**Impact sensing door unlock system**
In the event of air bag deployment resulting from a vehicle impact, all doors will automatically unlock.

**Auto door lock/unlock feature (if equipped)**
- All doors will automatically lock when the transaxle shift lever is shifted out of P (Park).
- All doors will automatically unlock when the transaxle shift lever is shifted into P (Park).

**Speed sensing door lock system**
All doors will be automatically locked after the vehicle speed exceeds 9.3 mph (15 km/h). And all doors will be automatically unlocked when you turn the engine off or when you remove the ignition key.

* NOTICE
You can select some auto door lock/unlock features in “User Settings” as follows;
- Speed sensing auto door lock
- Auto door unlock when the ignition key is removed from the ignition switch or engine is turned off.
- Auto door lock/unlock by shifting the shift lever out of P (Park) or into P (Park).

*For more information, refer to “User Settings” in this chapter.

**WARNING - Unattended children/animals**
Never leave children or animals unattended in your vehicle. An enclosed vehicle can become extremely hot, causing death or severe injury to unattended children or animals who cannot escape the vehicle.
Features of your vehicle

Child-protector rear door lock

The child safety lock is provided to help prevent children from accidentally opening the rear doors from inside the vehicle. The rear door safety locks should be used whenever children are in the vehicle.

1. Open the rear door.
2. Insert a key (or screwdriver) into the hole (1) and turn it to the “lock(  )“ position. When the child safety lock is in the lock position, the rear door will not open even when the inner door handle is pulled.
3. Close the rear door.

To open the rear door, pull the outside door handle.
Even though the doors may be unlocked, the rear door will not open by pulling the inner door handle (1) until the rear door child safety lock is unlocked.

**WARNING - Rear door locks**
Use the rear door safety locks whenever children are in the vehicle. If a child accidently opens the rear doors while the vehicle is motion, he can fall out.
LIFTGATE

Opening the liftgate

- The liftgate is locked or unlocked when all doors are locked or unlocked with the key, transmitter (or smart key) or central door lock switch.
- If unlocked, the liftgate can be opened by pressing the handle switch and then pulling the handle up.
- Only the liftgate is unlocked if the liftgate unlock button on the smart key is pressed (if equipped). Once the liftgate is opened and then closed, the liftgate is locked automatically.

* NOTICE
In cold and wet climates, door lock and door mechanisms may not work properly due to freezing conditions.

The liftgate swings upward. Make sure no objects or people are near the rear of the vehicle when opening the liftgate.

CAUTION - Liftgate lift
Make certain that you close the liftgate before driving your vehicle. Possible damage may occur to the liftgate lift cylinders and attached hardware if the liftgate is not closed prior to driving.

Closing the liftgate

To close the liftgate, lower and push down the liftgate firmly. Make sure that the liftgate is securely latched. Make sure your hands, feet and other parts of your body are safely out of the way before closing the liftgate.
Your vehicle is equipped with an emergency liftgate safety release lever located on the bottom of the liftgate. When someone is inadvertently locked in the compartment. The liftgate can be opened by doing as follows:

1. Remove the cover.
2. Push the release lever to the right.
3. Push up the liftgate.

**WARNING**
Do not hold the part (gas lifter) that supports the tailgate. Be aware that the deformation of the part may cause vehicle damage and a risk of injury.

**WARNING** - Exhaust fumes
Driving with the liftgate open is not advisable. Dangerous exhaust fumes can enter the passenger compartment. If you must drive with the liftgate opened, keep the air vents and all windows open so that additional outside air can enter.

**WARNING** - Rear cargo area
Occupants should never ride in the rear cargo area where no restraints are available. Occupants should always be properly restrained.
WARNING

- No one should be allowed to occupy the cargo area of the vehicle at any time. The cargo area is a very dangerous location in the event of a crash.
- Use the release lever for emergencies only. Use with extreme caution, especially while the vehicle is in motion.
Features of your vehicle

WINDOWS

(1) Driver's door power window switch
(2) Front passenger's door power window switch
(3) Rear door (left) power window switch
(4) Rear door (right) power window switch
(5) Window opening and closing
(6) Automatic power window up/down
(7) Power window lock switch

In cold and wet climates, power windows may not work properly due to freezing conditions.
Features of your vehicle

Power windows
The ignition switch must be in the ON position for power windows to operate. Each door has a power window switch that controls the door’s window. The driver has a power window lock button which can block the operation of the rear passenger windows. The power windows can be operated for approximately 30 seconds after the ignition key is removed or turned to the ACC or LOCK position. However, if the front doors are opened, the power windows cannot be operated even within the 30 second period.

If the window cannot be closed because it is blocked by objects, remove the objects and close the window.

✽ NOTICE
While driving with the rear windows down or with the sunroof (if equipped) in an open (or partially open) position, your vehicle may demonstrate a wind buffeting or pulsation noise. This noise is a normal occurrence and can be reduced or eliminated by taking the following actions. If the noise occurs with one or both of the rear windows down, partially lower both front windows approximately one inch. If you experience the noise with the sunroof open, slightly reduce the size of the sunroof opening.

Window opening and closing
The driver’s door has a master power window switch that controls all the windows in the vehicle. To open or close a window, press down or pull up the front portion of the corresponding switch to the first detent position (5).

WARNING
Do not install any accessories in the vehicle that extend into the open window area. Such objects will impact the proper function of the Automatic reversal “jam protection” feature described on page 4-26 of this manual.
Features of your vehicle

**Auto down window (if equipped)**

Pressing the power window switch momentarily to the second detent position (6) completely lowers the driver's window even when the switch is released. To stop the window at the desired position while the window is in operation, momentarily pull up the switch to the opposite direction of the window movement.

**Auto up/down window (if equipped)**

Pressing or pulling up the power window switch momentarily to the second detent position (6) completely lowers or raises the window even when the switch is released. To stop the window at the desired position while the window is in operation, pull up or press down and release the switch.

If the power window does not operate normally, the automatic power window system must be reset as follows:

1. Turn the ignition switch to the ON position.
2. Close the driver's window and continue pulling up the driver's power window switch for at least 1 second after the window is completely closed.
Features of your vehicle

Automatic reversal

If the upward movement of the window is blocked by an object or part of the body, the window will detect the resistance and will stop upward movement. The window will then lower approximately 11.8 in. (30 cm) to allow the object to be cleared.

The distance may vary based on the size or position of the window. If the window detects the resistance while the power window switch is pulled up continuously, the window will stop upward movement then lower approximately 1 in. (2.5 cm).

And if the power window switch is pulled up continuously again within 5 seconds after the window is lowered by the automatic window reversal feature, the automatic window reversal will not operate.

**NOTICE**

The automatic reverse feature for the driver’s window is only active when the “auto up” feature is used by fully pulling up the switch. The automatic reverse feature will not operate if the window is raised using the halfway position on the power window switch.

**WARNING**

Always check for obstructions before raising any window to avoid injuries or vehicle damage. If an object less than 4 mm (0.16 in.) in diameter is caught between the window glass and the upper window channel, the automatic reverse window may not detect the resistance and will not stop and reverse direction.

**WARNING**

The automatic reverse feature doesn’t activate while resetting power window system. Make sure body parts or other objects are safely out of the way before closing the windows to avoid injuries or vehicle damage.
Features of your vehicle

**Power window lock button**

• The driver can disable the power window switches on the passenger doors by pressing the power window lock button located on the driver's door to the LOCK position (pressed).

• **When the power window lock switch is pressed:**
  - The driver's master control can operate all the power windows.
  - The front passenger's control can operate the front passenger's power window.
  - The rear passenger's control cannot operate the rear passenger's power window.

Always double check to make sure all arms, hands, head and other obstructions are safely out of the way before closing a window.

**CAUTION - Opening /closing Window**

To prevent possible damage to the power window system, do not open or close two windows or more at the same time. This will also ensure the longevity of the fuse.

**WARNING - Power windows**

Do not allow children to play with the power windows. Keep the power window lock switch (on the driver’s door) in the LOCK (pressed) position.
**Features of your vehicle**

**HOOD**

**Opening the hood**

1. Pull the release lever to unlatch the hood. The hood should pop open slightly.

Open the hood after turning off the engine on a flat surface, shifting the shift lever to the P (Park) position for automatic transaxle and to the 1st (First) gear or R (Reverse) for manual transaxle, and setting the parking brake.

2. Go to the front of the vehicle, raise the hood slightly, pull the secondary latch (1) inside of the hood center and lift the hood (2).

3. Raise the hood. It will completely rise by itself after it has been raised about halfway.

**Closing the hood**

1. Before closing the hood, check the following:
   - All filler caps in engine compartment must be correctly installed.
   - Gloves, rags or any other combustible material must be removed from the engine compartment.

2. Return the support rod to its clip to prevent it from rattling.

3. Lower the hood until it is about 30 cm above the closed position and let it drop. Make sure that it locks into place.

4. Check that the hood has engaged properly. If the hood can be raised slightly, it is not properly engaged. Open it again and close it with a little more force.
Features of your vehicle

⚠️ WARNING
Before closing the hood, ensure that all obstructions are removed from the hood opening. Closing the hood with an obstruction present in the hood opening may result in severe personal injury.

⚠️ WARNING - Fire risk
Do not leave gloves, rags or any other combustible material in the engine compartment. Doing so may cause a heat-induced fire.

⚠️ WARNING - Unsecured engine hood
Always double check to be sure that the hood is firmly latched before driving away. If it is not latched, the hood could fly open while the vehicle is being driven, causing a total loss of visibility, which might result in an accident.

When you check the engine compartment, take caution to avoid contacting your head with the safety hook which is located inside of the hood.
FUEL FILLER LID
Opening the fuel filler lid

The fuel filler lid must be opened from inside the vehicle by pulling up the fuel filler lid opener.

If the fuel filler lid does not open because ice has formed around it, tap lightly or push on the lid to break the ice and release the lid. Do not pry on the lid. If necessary, spray around the lid with an approved de-icer fluid (do not use radiator anti-freeze) or move the vehicle to a warm place and allow the ice to melt.

Closing the fuel filler lid

1. Stop the engine.
2. To open the fuel filler lid, push the fuel filler lid opener button.
3. Pull open the fuel filler lid (1).
4. To remove the cap, turn the fuel filler cap (2) counterclockwise.
5. Refuel as needed.

* NOTICE
There may be an intermittent noise near the refueling hole while the engine is idling if the fuel cap is not closed securely. This occurs normally with the OBD system.

* NOTICE
When refueling fully on a slop, the fuel gauge may not point to the F position. It is not a malfunction. If you move your vehicle to a level ground, the fuel gauge will move to the full position.
Features of your vehicle

⚠ WARNING - Refueling
Always remove the fuel cap carefully and slowly. If the cap is venting fuel or if you hear a hissing sound, wait until the condition stops before completely removing the cap. If pressurized fuel sprays out, it can cover your clothes or skin and subject you to the risk of fire and burns.

Always check that the fuel cap is installed securely to prevent fuel spillage in the event of an accident.

✽ NOTICE
Tighten the cap until it clicks once, otherwise the fuel cap open warning indicator light will illuminate.

⚠ WARNING - Fire/explosion risk
Read and follow all warnings posted at the gas station facility. Failure to follow all warnings will result in severe personal injury, severe burns or death due to fire or explosion.

⚠ WARNING - Static electricity
- Before touching the fuel nozzle, you should eliminate potentially dangerous static electricity discharge by touching another metal part of the vehicle, a safe distance away from the fuel filler neck, nozzle, or other gas source.
- Do not get back into a vehicle once you have begun refueling since you can generate static electricity by touching, rubbing or sliding against any item or fabric (polyester, satin, nylon, etc.) capable of producing static electricity. Static electricity discharge can ignite fuel vapors resulting in rapid burning. If you must reenter the vehicle, you should once again eliminate potentially dangerous static electricity discharge by touching a metal part of the vehicle, away from the fuel filler neck, nozzle or other gasoline source.
Features of your vehicle

⚠️ WARNING - Portable fuel container
When using an approved portable fuel container, be sure to place the container on the ground prior to refueling. Static electricity discharge from the container can ignite fuel vapors causing a fire. Once refueling has begun, contact with the vehicle should be maintained until the filling is complete. Use only approved portable plastic fuel containers designed to carry and store gasoline.

⚠️ WARNING - Cell phone fires
Do not use cellular phones while refueling. Electric current and/or electronic interference from cellular phones can potentially ignite fuel vapors causing a fire.

⚠️ WARNING - Smoking
DO NOT use matches or a lighter and DO NOT SMOKE or leave a lit cigarette in your vehicle while at a gas station especially during refueling. Automotive fuel is highly flammable and can, when ignited, result in fire.

⚠️ WARNING - Refueling & Vehicle fires
When refueling, always shut the engine off. Sparks produced by electrical components related to the engine can ignite fuel vapors causing a fire. Once refueling is complete, check to make sure the filler cap and filler door are securely closed, before starting the engine.

⚠️ WARNING - Portable fuel container
Do not spill fuel on the exterior surfaces of the vehicle. Any type of fuel spilled on painted surfaces may damage the paint.

Make sure to refuel your vehicle according to the “Fuel requirements” suggested in chapter 1.
If the fuel filler cap requires replacement, use only a genuine Kia cap or the equivalent specified for your vehicle. An incorrect fuel filler cap can result in a serious malfunction of the fuel system or emission control system.
The sunroof can be operated for approximately 30 seconds after the ignition key is removed or turned to the ACC or LOCK position. However, if the front doors are opened, the sunroof cannot be opened even within the 30 seconds period.

**NOTICE**
- In cold and wet climates, the sunroof may not work properly due to freezing conditions.
- After a vehicle is washed or in a rainstorm be sure to wipe off any water that is on the sunroof before operating it.

**CAUTION - Sunroof control**
- Do not continue to pull or push the sunroof glass control lever after the sunroof is fully opened, closed, or tilted. Damage to the motor or system components could occur.
- Make sure the sunroof is closed fully when leaving your vehicle. If the sunroof is open, rain or snow may leak through the sunroof and wet the interior as well as cause theft.

**WARNING**
Never adjust the sunroof or sunshade while driving. This could result in loss of control and an accident that may cause death, serious injury, or property damage.

**WARNING**
To avoid accidental injury, do not let children operate the sunroof without adult supervision.

**WARNING - Roof cargo**
Do not operate the sunroof while using the roof rack to transport cargo. This may cause the cargo to come loose and distract the driver.
Features of your vehicle

Sunroof open warning (if equipped)

If the driver removes the ignition key (smart key: turns off the engine) when the sunroof is not fully closed, the warning chime will sound for a few seconds and a message will appear on the LCD display or warning indicator will illuminate.
Close the sunroof securely when leaving your vehicle.

Sliding the sunroof

When the sunshade is closed
Pull the sunroof control lever backward to the 2nd detent position, the sunshade and sunroof glass will slide all the way open. To stop the sunroof movement at any point, push the sunroof control lever momentarily.

❈ The front part of the sunroof glass can only be opened and closed

When the sunshade is opened
Pull the sunroof control lever backward to the 1st or 2nd detent position, the sunroof glass will slide all the way open. To stop the sunroof movement at any point, pull or push the sunroof control lever momentarily.
Features of your vehicle

Automatic reversal

If an object or part of the body is detected while the sunroof is closing automatically, it will reverse the direction, and then stop.

The auto reverse function does not work if a tiny obstacle is between the sliding glass and the sunroof sash. You should always check that all passengers and objects are away from the sunroof before closing it.

Objects less than 0.16 inch (4 mm) in diameter caught between the sunroof glass and the front window channel may not be detected by the automatic reverse window and the window will not stop and reverse direction.

Tilting the sunroof

Push the sunroof control lever upward, the sunshade will slide halfway open then the sunroof glass will tilt.

To stop the sunroof movement at any point, push the sunroof control lever momentarily.

When the sunshade is closed

When the sunshade is opened

Push the sunroof control lever upward, the sunroof glass will tilt.

To stop the sunroof movement at any point, push the sunroof control lever momentarily.

WARNING - Sunroof

- Be careful that no head, hands and body parts are obstructed by a closing sunroof.

- Do not extend the face, neck, arms or body outside the sunroof while driving.

WARNING - Sunroof Operation

When closing the sunroof, make sure there are no body parts in the movement range of the sliding roof. Parts of the body could become trapped or crushed.
Sunshade

To open the sunshade
Pull the sunroof control lever backward to the 1st detent position.

To close the sunshade when the sunroof glass is closed
Push the sunroof control lever forward or pull it down to the 1st detent position.
To stop the sliding at any point, press the sunshade control switch momentarily.

* NOTICE
Only the front glass of the panorama sunroof opens and closes.

Closing the sunroof

To close the sunroof glass with the sunshade
Push the sunroof control lever forward or downward to the 2nd detent position. The sunroof glass and sunshade will close automatically.
To stop the sunroof movement at any point, push the sunroof control lever momentarily.

To close the sunroof glass only
Push the sunroof control lever forward or downward to the 1st detent position. The sunroof glass will close automatically.
To stop the sunroof movement at any point, push the sunroof control lever momentarily.

* NOTICE
Wrinkles formed on the sunshade as material characteristic are normal.

CAUTION - Sunroof motor damage
If you try to open the sunroof when the temperature is below freezing or when the sunroof is covered with snow or ice, the glass or the motor could be damaged.

CAUTION
Periodically remove any dirt that may accumulate on the guide rail to prevent damage to the sunroof.
Features of your vehicle

Resetting the sunroof
Whenever the vehicle battery is disconnected or discharged, you must reset your sunroof system as follows:
1. Start the engine.
2. Close the sunshade and sunroof completely if opened.
3. Release the sunroof control lever.
4. Push the sunroof control lever forward in the direction of close for about 10 seconds until the sunshade slightly moves. Then, release the lever.
5. Push the sunroof control lever forward in the direction of close, until the sunroof operates as follows again:

   Sunshade Open → Glass Tilt Open → Glass Slide Open → Glass Slide Close → Sunshade Close

Then, release the lever.

When this is complete, the sunroof system has been reset.

⚠️ CAUTION

- Do not pull or push the sunshade by hand as such action may damage the sunshade or cause it to malfunction.
- Close the sunroof when driving in dusty environments. Dust may cause a malfunction of the vehicle system.

⚠️ CAUTION

If the sunroof is not reset when the vehicle battery is disconnected or discharged, or related fuse is blown, the sunroof may operate improperly.
**Features of your vehicle**

**STEERING WHEEL**

**Electric power steering (EPS)**

The power steering uses a motor to assist you in steering the vehicle. If the engine is off or if the power steering system becomes inoperative, the vehicle may still be steered, but it will require increased steering effort.

The motor driven power steering is controlled by a power steering control unit which senses the steering wheel torque and vehicle speed to command the motor.

The steering becomes heavier as the vehicle’s speed increases and becomes lighter as the vehicle’s speed decreases for optimum steering control.

Should you notice any change in the effort required to steer during normal vehicle operation, have the power steering checked by an authorized Kia dealer.

- If the Electric Power Steering System does not operate normally, the warning light will illuminate on the instrument cluster. The steering wheel may require increased steering effort. Take your vehicle to an authorized Kia dealer and have the vehicle checked as soon as possible.

- When you operate the steering wheel in low temperature, noise may occur. If temperature rises, the noise will likely disappear. This is a normal condition.

- When the vehicle is stationary, when the steering wheel is turned all the way to the left or right continuously, the steering wheel becomes harder to turn. The power assist is limited to protect the motor from overheating. As time passes, the steering wheel return to its normal condition.

- The following symptoms may occur during normal vehicle operation:
  - The EPS warning light does not illuminate.
  - The steering gets heavy immediately after turning the ignition switch on. This happens as the system performs the EPS system diagnostics. When the diagnostics are completed, the steering wheel will return to its normal condition.
  - A click noise may be heard from the EPS relay after the ignition switch is turned to the ON or LOCK (OFF) position.
  - A motor noise may be heard when the vehicle is at a stop or at a low driving speed.
  - If the Electric Power Steering System does not operate normally, the warning light will illuminate on the instrument cluster. The steering wheel may become difficult to control or operate abnormally. Take your vehicle to an authorized Kia dealer and have the vehicle checked as soon as possible.

(Continued)
(Continued)

- When you operate the steering wheel in low temperature, abnormal noise may occur. If temperature rises, the noise will likely disappear. This is a normal condition.
- When the charging system warning light comes on due to the low voltage (When the alternator or battery does not operate normally or it malfunctions), the steering wheel may require increased steering effort.

**Tilt and telescopic steering**

Tilt and telescopic steering allows you to adjust the steering wheel before you drive. You can also raise it to give your legs more room when you exit and enter the vehicle.

The steering wheel should be positioned so that it is comfortable for you to drive, while permitting you to see the instrument panel warning lights and gauges.

To change the steering wheel angle, pull down the lock-release lever (1), adjust the steering wheel to the desired angle (2) and height (3, if equipped) then pull up the lock-release lever to lock (4) the steering wheel in place. Be sure to adjust the steering wheel to the desired position before driving.
Heated steering wheel (if equipped)

With the ignition switch in the ON position, pressing the heated steering wheel button warms the steering wheel. The indicator on the button will illuminate.

To turn the heated steering wheel off, press the button once again. The indicator on the button will turn off.

* NOTICE

The heated steering wheel will turn off automatically approximately 30 minutes after the heated steering wheel is turned on.

CAUTION

- Do not install any grip to operate the steering wheel. This causes damage to the heated steering wheel system.
- When cleaning the heated steering wheel, do not use an organic solvent such as paint thinner, benzene, alcohol and gasoline. Doing so may damage the surface of the steering wheel.
- If the surface of steering wheel is damaged by sharp object, damage to the heated steering wheel components could occur.

WARNING

If the steering wheel becomes too warm, turn the system off. The heated steering wheel may cause burns even at low temperatures, especially if used for long periods of time.

Horn

To sound the horn, press the horn symbols on your steering wheel. Check the horn regularly to be sure it operates properly.

* NOTICE

To sound the horn, press the area indicated by the horn symbol on your steering wheel (see illustration). The horn will operate only when this area is pressed.
Features of your vehicle

FLEX STEER (if equipped)

The FLEX STEER controls steering effort based upon the driver's preference or road condition.
You can select the desired steering mode by pressing the FLEX STEER button.
When the steering mode button is pressed, the selected steering mode will appear on the instrument cluster.

If the steering mode button is pressed within 4 seconds, the steering mode will change as shown above.
If the steering wheel mode button is not pressed for about 4 seconds, the LCD display will change to the previous screen (for Type B cluster).

Normal mode
The normal mode offers medium steering effort.

Sport mode
The steering wheel becomes heavier. The sport mode is usually used when driving on the highway.

⚠️ CAUTION
- For your safety, if you press the steering mode button while operating the steering wheel, but the steering effort will not change immediately. After operating the steering wheel, the steering effort will change automatically to the selected mode.
- Use caution when changing the steering mode while driving.
- When the electronic power steering is not operating properly, the flex steering wheel will not work.
MIRRORS

Inside rearview mirror
Adjust the rearview mirror so that the center view through the rear window is seen. Make this adjustment before you start driving. Do not place objects in the rear seat or cargo area which would interfere with your vision through the rear window.

**WARNING - Mirror adjustment**
Do not adjust the rearview mirror while the vehicle is moving. This could result in loss of control.

**WARNING**
Do not modify the inside mirror and don’t install a wide mirror. It could result in injury, during an accident or deployment of the air bag.

Day/night rearview mirror (if equipped)

Make this adjustment before you start driving and while the day/night lever is in the day position.
Pull the day/night lever toward you to reduce the glare from the headlights of the vehicles behind you during night driving.

*Remember that you lose some rearview clarity in the night position.*
Electric chromic mirror (ECM) (if equipped)

The electric rearview mirror automatically controls the glare from the headlights of the vehicles behind you in nighttime or low light driving conditions. The sensor mounted in the mirror senses the light level around the vehicle, and automatically controls the headlight glare from the vehicles behind you.

When the engine is running, the glare is automatically controlled by the sensor mounted in the rearview mirror.

Whenever the shift lever is shifted into reverse (R), the mirror will automatically go to the brightest setting in order to improve the driver's view behind the vehicle.

△ CAUTION - Cleaning mirror

When cleaning the mirror, use a paper towel or similar material dampened with glass cleaner. Do not spray glass cleaner directly on the mirror. It may cause the liquid cleaner to enter the mirror housing.

To operate the electric rearview mirror:

- The mirror defaults to the ON position whenever the ignition switch is turned on.
- Press the ON/OFF button (1) to turn the automatic dimming function off. The mirror indicator light will turn off.
  Press the ON/OFF button (1) to turn the automatic dimming function on. The mirror indicator light will illuminate.
Outside rearview mirror

Be sure to adjust the mirror angles before driving.

Your vehicle is equipped with both left-hand and right-hand outside rearview mirrors. The mirrors can be adjusted remotely with the remote switch. The mirror heads can be folded back to prevent damage during an automatic vehicle wash or when passing through a narrow street.

The right outside rearview mirror is convex. Objects seen in the mirror are closer than they appear.

Use your interior rearview mirror or direct observation to determine the actual distance of following vehicles when changing lanes.

⚠️ CAUTION - Rearview mirror

Do not scrape ice off the mirror face; this may damage the surface of the glass. If ice should restrict the movement of the mirror, do not force the mirror for adjustment. To remove ice, use a deicer spray, or a sponge or soft cloth with very warm water.

If the mirror is jammed with ice, do not adjust the mirror by force. Use an approved spray de-icer (not radiator antifreeze) to release the frozen mechanism or move the vehicle to a warm place and allow the ice to melt.

⚠️ WARNING - Mirror adjustment

Do not adjust or fold the outside rearview mirrors while the vehicle is moving. This could result in loss of control.
Remote control

Electric type

The electric remote control mirror switch allows you to adjust the position of the left and right outside rearview mirrors. To adjust the position of either mirror the ignition switch should be in the ACC position. Move the switch (1) to R or L to select the right side mirror or the left side mirror, then press a corresponding point on the mirror adjustment control to position the selected mirror up, down, left or right.

After the adjustment, put the switch into the neutral (center) position to prevent inadvertent adjustment.

CAUTION - Outside mirror

- The mirrors stop moving when they reach the maximum adjusting angles, but the motor continues to operate while the switch is pressed.
- Do not press the switch longer than necessary, the motor may be damaged.
- Do not attempt to adjust the outside rearview mirror by hand. Doing so may damage the parts.

Folding the outside rearview mirror

Manual type

To fold the outside rearview mirror, grasp the housing of the mirror and then fold it toward the rear of the vehicle.
Features of your vehicle

**Electric type**
The outside rearview mirror can be folded or unfolded by pressing the switch as below.

**Left (1)**: The mirror will unfold.
**Right (2)**: The mirror will fold.

**Center (AUTO, 3)**:
The mirror will fold or unfold automatically as follows:
- **Without smart key system**
  - The mirror will fold or unfold when the door is locked or unlocked by the transmitter.
- **With smart key system**
  - The mirror will fold or unfold when the door is locked or unlocked by the smart key.
  - The mirror will fold or unfold when the door is locked or unlocked by the button on the outside door handle.
  - The mirror will unfold when you approach the vehicle (all doors closed and locked) with a smart key in possession. (if equipped)

⚠️ **CAUTION - Electric type outside rearview mirror**
The electric type outside rearview mirror operates even though the ignition switch is in the OFF position. However, to prevent unnecessary battery discharge, do not adjust the mirrors longer than necessary while the engine is not running. In case it is an electric type outside rearview mirror, don’t fold it by hand. It could cause motor failure.
Features of your vehicle

INSTRUMENT CLUSTER

- **Type A**

- **Type B**

1. Tachometer
2. Speedometer
3. Engine coolant temperature gauge
4. Fuel gauge
5. LCD display
6. Warning and indicator lights (if equipped)
7. Turn signal indicator lights

* The actual cluster in the vehicle may differ from the illustration. For more details, refer to the “Gauges” in this chapter.
**Instrument Cluster Control**

*Adjusting Instrument Cluster Illumination*

The brightness of the instrument panel illumination is changed by pressing the illumination control button (“+” or “-“) when the ignition switch or Engine Start/Stop button is ON, or the taillights are turned on.

- If you hold the illumination control button (“+” or “-“), the brightness will be changed continuously.
- If the brightness reaches to the maximum or minimum level, an alarm will sound.

**LCD Display Control**

The LCD display modes can be changed by using the control buttons on the steering wheel.
Features of your vehicle

[For type A cluster]
(1) TRIP : TRIP button for changing trip modes
(2) RESET : RESET button for resetting items

[For type B cluster]
(1) : MODE button for changing modes or SELECT button for setting the selected item
(2) : MOVE button for changing items or RESET button for resetting the selected item

* For the LCD modes, refer to “LCD Display” in this chapter.

Gauges

**Speedometer**
- Type A

The speedometer indicates the speed of the vehicle and is calibrated in miles per hour (mph) and/or kilometers per hour (km/h).

**Tachometer**
- Type A

The tachometer indicates the approximate number of engine revolutions per minute (rpm).
Use the tachometer to select the correct shift points and to prevent lugging and/or over-revving the engine.
Features of your vehicle

**Engine Coolant Temperature Gauge**

- **Type A**
- **Type B**

This gauge indicates the temperature of the engine coolant when the ignition switch or Engine Start/Stop button is ON.

If the gauge pointer moves beyond the normal range area toward the “H” position, it indicates overheating that may damage the engine. Do not continue driving with an overheated engine. If your vehicle overheats, refer to “If the Engine Overheats” in chapter 7.

**CAUTION - Red zone**

Do not operate the engine within the tachometer’s RED ZONE. This may cause severe engine damage.

**WARNING - Hot radiator**

Never remove the radiator cap when the engine is hot. The engine coolant is under pressure and could severely burn. Wait until the engine is cool before adding coolant to the reservoir.
Features of your vehicle

**Fuel Gauge**

This gauge indicates the approximate amount of fuel remaining in the fuel tank.

*NOTICE*
- The fuel tank capacity is given in chapter 9.
- The fuel gauge is supplemented by a low fuel warning light, which will illuminate when the fuel tank is nearly empty.
- On inclines or curves, the fuel gauge pointer may fluctuate or the low fuel warning light may come on earlier than usual due to the movement of fuel in the tank.

*NOTICE - Fuel gauge*
Running out of fuel can expose vehicle occupants to danger. You must stop and obtain additional fuel as soon as possible after the warning light comes on or when the gauge indicator comes close to the "E (Empty)" level.

*CAUTION - Low fuel*
Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire damaging the catalytic converter.

*NOTICE*
Fuel display may not be accurate if you are filling in sloping places.
The outside temperature on the display may not change immediately like a general thermometer to prevent the driver from being inattentive.

To change the temperature unit (from °C to °F or from °F to °C)
• Type A Cluster
  Change the trip modes to Distance To Empty mode and then press and hold the RESET button for 5 seconds and more.
• Type B Cluster
  The temperature unit can be changed by using the “User Settings” mode of the LCD display

※ For more details, refer to “LCD Display” in this chapter.

### Odometer
- **Type A**
- **Type B**

The odometer indicates the total distance that the vehicle has been driven and should be used to determine when periodic maintenance should be performed.
- Odometer range: 0 ~ 999,999 miles or kilometers.

### Outside Temperature Gauge
- **Type A**
- **Type B**

This gauge indicates the current outside air temperatures by 1°F (1°C).
- Temperature range: -40°F ~ 140°F (-40°C ~ 60°C)
Features of your vehicle

Transaxle Shift Indicator

Automatic Transaxle Shift Indicator

- Park : P
- Reverse : R
- Neutral : N
- Drive : D
- Sports Mode : 1, 2, 3, 4, 5, 6

This indicator displays which automatic transaxle shift lever is selected.

Manual Transaxle Shift Indicator (if equipped)

This indicator informs which gear is desired while driving to save fuel.

- Shifting up : ▲2, ▲3, ▲4, ▲5, ▲6
- Shifting down : ▼1, ▼2, ▼3, ▼4, ▼5
For example:

▲atories: Indicates that shifting up to the 3rd gear is desired (currently the shift lever is in the 2nd or 1st gear).

▼atories: Indicates that shifting down to the 3rd gear is desired (currently the shift lever is in the 4th, 5th, or 6th gear).

When the system is not working properly, the indicator is not displayed.
### LCD DISPLAY (IF EQUIPPED)

**LCD Modes (for Type B cluster)**

<table>
<thead>
<tr>
<th>Modes</th>
<th>Symbol</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Trip Computer</td>
<td>🚗</td>
<td>This mode displays driving information like the tripmeter, fuel economy, and so on. For more details, refer to “Trip Computer” in this chapter.</td>
</tr>
<tr>
<td>Turn By Turn (if equipped)</td>
<td>🗯️</td>
<td>This mode displays the state of the navigation.</td>
</tr>
<tr>
<td>LDWS (if equipped)</td>
<td>🚭</td>
<td>This mode displays the state of the Lane Departure Warning System (LDWS). For more details, refer to “Lane Departure Warning System (LDWS)” in chapter 6.</td>
</tr>
<tr>
<td>User Settings</td>
<td>🔒</td>
<td>On this mode, you can change settings of the doors, lamps, and so on.</td>

* For controlling the LCD modes, refer to “LCD Display Control” in this chapter.
Features of your vehicle

Service Mode

Service Interval

Service in

It calculates and displays when you need a scheduled maintenance service (mileage or days).

If the remaining mileage or time reaches 900 mi. (1,500 km) or 30 days, “Service in” message is displayed for several seconds each time you set the ignition switch or Engine Start/Stop Button to the ON position.

NOTICE

If any of the following conditions occurs, the mileage and days may be incorrect.
- The battery cable is disconnected.
- The fuse switch is turned off.
- The battery is discharged.

Service required

If you do not have your vehicle serviced according to the already inputted service interval, “Service required” message is displayed for several seconds each time you set the ignition switch or Engine Start/Stop Button to the ON position (The mileage and time changes to “---”).

To reset the service interval to the mileage and days you inputted before:
- Press the RESET button \(\nabla\) for more than 1 second.
Master Warning Mode
(if equipped)

- This warning light informs the driver the following situations
  - BSD fail (if equipped)
  - TPMS (if equipped)

The Master Warning Light illuminates when more than one of the above warning situations occur. If the warning situation is solved, the master warning light will be turned off.

User Settings Mode

Description

On this mode, you can change setting of the doors, lamps, and so on.

WARNING
Do not adjust the User Setting while driving. You may lose your steering control and cause severe personal injury or accidents.

Edit settings after shifting to P/Edit settings after engaging parking brake

This warning message appears if you try to adjust the User Settings while driving.

- Automatic/Dual clutch transmission
  - For your safety, change the User Settings after parking the vehicle, applying the parking brake and moving the shift lever to P (Park).

- Manual transmission
  - For your safety, change the User Settings after engaging the parking brake and moving the shift lever to N (Neutral).
### Driving Assist (if equipped)

Features of your vehicle

**Service Interval**

On this mode, you can activate the service interval function with mileage (mi. or km) and period (months).

**Turn By Turn Mode (if equipped)**

This mode displays the state of the navigation.

**Warning Messages**

*Shift to “P” position (for smart key system and automatic transaxle)*

- This warning message illuminates if you try to turn off the engine without the shift lever in P (Park) position.
- At this time, the Engine Start/Stop Button turns to the ACC position (If you press the Engine Start/Stop Button once more, it will turn to the ON position).

*Low Key Battery (for smart key system)*

- This warning message illuminates if the battery of the smart key is discharged when the Engine Start/Stop Button changes to the OFF position.
Features of your vehicle

Press brake pedal to start engine (for smart key system and automatic transaxle)

• This warning message illuminates if the Engine Start/Stop Button changes to the ACC position twice by pressing the button repeatedly without depressing the brake pedal.
• It means that you should depress the brake pedal to start the engine.

Press clutch pedal to start engine (for smart key system and manual transaxle)

• This warning message illuminates if the Engine Start/Stop Button changes to the ACC position twice by pressing the button repeatedly without depressing the clutch pedal.
• It means that you should depress the clutch pedal to start the engine.

Key not in vehicle (for smart key system)

• This warning message illuminates if the smart key is not in the vehicle while the door is opened or closed with the ignition switch in the ACC position or engine is running.
• It means that you should always have the smart key with you.

Key not detected (for smart key system)

• This warning message illuminates if the smart key is not detected when you press the Engine Start/Stop Button.

Press start button again (for smart key system)

• This warning message illuminates if you cannot operate the Engine Start/Stop Button when there is a problem with the Engine Start/Stop Button system.
• It means that you could start the engine by pressing the Engine Start/Stop Button once more.
• If the warning illuminates each time you press the Engine Start/Stop Button, have your vehicle inspected by an authorized Kia dealer.
**Press start button with smart key (for smart key system)**

- This warning message illuminates if you press the Engine Start/Stop Button while the warning message “Key not detected” is illuminating.
- At this time, the immobilizer indicator light blinks.

**Check fuse “BRAKE SWITCH” (for smart key system and automatic transaxle)**

- This warning message illuminates if the brake switch fuse is disconnected.
- It means that you should replace the fuse with a new one. If that is not possible, you can start the engine by pressing the Engine Start/Stop Button for 10 seconds in the ACC position.

**Shift to “P” or “N” to start engine (for smart key system and automatic transaxle)**

- This warning message illuminates if you try to start the engine with the shift lever not in the P (Park) or N (Neutral) position.

**NOTICE**

You can start the engine with the shift lever in the N (Neutral) position. But, for your safety, we recommend that you start the engine with the shift lever in the P (Park) position.

**Door Open**

- It means that any door is open.
**Liftgate Open**
- It means that the liftgate is open.

**Sunroof Open (if equipped)**
- The warning message illuminates if you turn off the engine when the sunroof is open.

**Turn on "FUSE SWITCH" (if equipped)**
- This warning message illuminates if the fuse switch on the fuse box is OFF.
- The “FUSE” and “on” warning messages are displayed alternately. (for Type A cluster)
- It means that you should turn the fuse switch on.

*For more details, refer to “Fuses” in chapter 8.*
Overview

Description
The trip computer is a microcomputer-controlled driver information system that displays information related to driving.

* NOTICE
Some driving information stored in the trip computer (for example Average Vehicle Speed) resets if the battery is disconnected.

Trip Modes (for Type A cluster)

- Tripmeter A
- Tripmeter B
- Range
- Average Fuel Economy*
- Average Vehicle Speed*
- Elapsed Time*

* if equipped

To change the trip mode, press the TRIP button.

Trip Modes (for Type B cluster)

- TRIP
- Average Fuel Economy
- Instant Fuel Economy

Accumulate Info

- Tripmeter
- Fuel Economy
- Timer

Drive Info

- Tripmeter
- Fuel Economy
- Timer

Digital speedometer

To change the trip mode, press the MOVE button ▼.
Trip A/B (for Type A cluster)

**Tripmeter (1)**
- The tripmeter is the total driving distance since the last tripmeter reset.
  - Distance range: 0.0 ~ 9999.9 mi. or km
- To reset the tripmeter, press the RESET/ button on the steering wheel for more than 1 second when the tripmeter is displayed.

**Average Vehicle Speed (2)**
- The average vehicle speed is calculated by the total driving distance and driving time since the last average vehicle speed reset.
  - Speed range: 160 MPH or 200 km/h
- To reset the average vehicle speed, press the RESET/ button on the steering wheel for more than 1 second when the average vehicle speed is displayed.

**Elapse Time (3)**
- The elapsed time is the total driving time since the last elapsed time reset.
  - Time range (hh:mm): 00:00 ~ 99:59
- To reset the elapsed time, press the RESET/ button on the steering wheel for more than 1 second when the elapsed time is displayed.

*NOTICE*
- The average vehicle speed is not displayed if the driving distance is less than 0.03 miles (50 meters) or the driving time is less than 10 seconds since the ignition switch or Engine Start/Stop button is turned to ON.
- Even if the vehicle is not in motion, the average vehicle speed keeps going while the engine is running.

*NOTICE*
Even if the vehicle is not in motion, the elapsed time keeps going while the engine is running.
Features of your vehicle

Fuel Economy

Range (1)

- The range to empty is the estimated distance the vehicle can be driven with the remaining fuel.
  - Distance range: 1 ~ 999 km or 1 ~ 999 mi.
- If the estimated distance is below 1mi. (1km), the trip computer will display “---” as distance to empty.
- If the vehicle is not on level ground or the battery power has been interrupted, the distance to empty function may not operate correctly.
- The distance to empty may differ from the actual driving distance as it is an estimate of the available driving distance.
- The trip computer may not register additional fuel if less than 6 liters (1.6 gallons) of fuel are added to the vehicle.
- The fuel economy and distance to empty may vary significantly based on driving conditions, driving habits, and condition of the vehicle.

Average Fuel Economy (2)

- The average fuel economy is calculated by the total driving distance and fuel consumption since the last average fuel economy reset.
  - Fuel economy range: 0.0 ~ 99.9 MPG or L/100km
- The average fuel economy can be reset both manually and automatically.

Manual reset

To clear the average fuel economy manually, press the RESET/ button on the steering wheel for more than 1 second when the average fuel economy is displayed.
**Automatic reset**
- Off: The average fuel economy will not reset automatically whenever refueling.
- After Ignition (Auto Reset): The average fuel economy will reset automatically when after 4 hours ignition Off.
- After Refueling (Auto Reset): The average fuel economy will reset automatically when refueling more than 1.6 gallons (6 liters).

*NOTICE*
The average fuel economy is not displayed for more accurate calculation if the vehicle does not drive more than 10 seconds or 0.03 miles (50 meters) since the ignition switch or Engine Start/Stop button is turned to ON.

**Instant Fuel Economy (3)**
- This mode displays the instant fuel economy during the last few seconds when the vehicle speed is more than 6.2 MPH (10 km/h).
- Fuel economy range: 0 ~ 99.9 MPG or L/100km

**Accumulated Info display (for Type B cluster)**
This display shows the accumulated trip distance (1), the average fuel economy (2), and the total driving time (3).

The information is calculated starting from the last reset.
To manually reset the information, press and hold the ▼ button when viewing the Accumulated driving info. The trip distance, the average fuel economy, and total driving time will reset simultaneously.
Features of your vehicle

The accumulated driving information will continue to be counted while the engine is still running (for example, when the vehicle is in traffic or stopped at a stop light.

✽ NOTICE
The vehicle must be driven for a minimum of 0.19 miles (300 meters) since the last ignition key cycle before the average fuel economy will be recalculated.

Drive Info display
(for Type B cluster)

This display shows the trip distance (1), the average fuel economy (2), and the total driving time (3).
The information is calculated for each ignition cycle. The driving information data gets initialized, when it has passed 4 hours after turning OFF the engine. In other words, the last driving information is available 4 hours after you have turned on the engine.

To manually reset the information, press and hold the \( \downarrow \) button when viewing the Driving info. The trip distance, the average fuel economy, and total driving time will reset simultaneously.
The driving information will continue to be counted while the engine is still running (for example, when the vehicle is in traffic or stopped at a stop light.)

✽ NOTICE
The vehicle must be driven for a minimum of 0.19 miles (300 meters) since the last ignition key cycle before the average fuel economy will be recalculated.
Features of your vehicle

Digital speedometer

This mode displays the current speed of the vehicle.
WARNING AND INDICATOR LIGHTS

Warning lights

* NOTICE - Warning lights
Make sure that all warning lights are OFF after starting the engine. If any light is still ON, this indicates a situation that needs attention.

**Air bag Warning Light**

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
- It illuminates for approximately 6 seconds and then goes off.
- When there is a malfunction with the SRS.

In this case, have your vehicle inspected by an authorized Kia dealer.

**Seat Belt Warning Light**

This warning light informs the driver that the seat belt is not fastened.

* For more details, refer to the “Seat Belts” in chapter 3.
Parking Brake & Brake Fluid Warning Light

This warning light illuminates:
• Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds
  - It remains on if the parking brake is applied.
• When the parking brake is applied.
• When the brake fluid level in the reservoir is low.
  - If the warning light illuminates with the parking brake released, it indicates the brake fluid level in reservoir is low.

If the brake fluid level in the reservoir is low:
1. Drive carefully to the nearest safe location and stop your vehicle.
2. With the engine stopped, check the brake fluid level immediately and add fluid as required (For more details, refer to “Brake Fluid” in chapter 8).
   Then check all brake components for fluid leaks. If any leaks in the brake system is still found, the warning light remains on, or the brakes do not operate properly, do not drive the vehicle.
   In this case, have your vehicle towed to an authorized Kia dealer and inspected.

Dual-diagonal braking system
Your vehicle is equipped with dual-diagonal braking systems. This means you still have braking on two wheels even if one of the dual systems should fail.
With only one of the dual systems working, more than normal pedal travel and greater pedal pressure are required to stop the vehicle.
Also, the vehicle will not stop in as short a distance with only a portion of the brake system working.
If the brakes fail while you are driving, shift to a lower gear for additional engine braking and stop the vehicle as soon as it is safe to do so.
Driving the vehicle with a warning light ON is dangerous. If the Parking Brake & Brake Fluid Warning Light illuminates with the parking brake released, it indicates that the brake fluid level is low.
In this case, have your vehicle inspected by an authorized Kia dealer.
Anti-lock Brake System (ABS) Warning Light

This warning light illuminates:
• Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
• When there is a malfunction with the ABS (The normal braking system will still be operational without the assistance of the anti-lock brake system).
In this case, have your vehicle inspected by an authorized Kia dealer.

Electronic Brake force Distribution (EBD) System Warning Light

These two warning lights illuminate at the same time while driving:
• When the ABS and regular brake system may not work normally.
In this case, have your vehicle inspected by an authorized Kia dealer.

⚠️ WARNING - Electronic Brake force Distribution (EBD) System Warning Light

When both ABS and Parking Brake & Brake Fluid Warning Lights are on, the brake system will not work normally and you may experience an unexpected and dangerous situation during sudden braking thereby increasing the risk of a crash or injury.
In this case, avoid high speed driving and abrupt braking. Have your vehicle inspected by an authorized Kia dealer as soon as possible.
NOTICE - Electronic Brake force Distribution (EBD) System Warning Light

When the ABS Warning Light is on or both ABS and Parking Brake & Brake Fluid Warning Lights are on, the speedometer, odometer, or trip-meter may not work. Also, the EPS Warning Light may illuminate and the steering effort may increase or decrease. In this case, have your vehicle inspected by an authorized Kia dealer as soon as possible.

Electronic Power Steering (EPS) Warning Light (if equipped)

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It remains on until the engine is started.
- When there is a malfunction with the EPS.
In this case, have your vehicle inspected by an authorized Kia dealer.

Malfunction Indicator Lamp (MIL)

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It remains on until the engine is started.
- When there is a malfunction with the emission control system.
In this case, have your vehicle inspected by an authorized Kia dealer.

CAUTION - Malfunction Indicator Lamp (MIL)

Driving with the Malfunction Indicator Lamp (MIL) on may cause damage to the emission control systems which could effect drivability and/or fuel economy.
Features of your vehicle

CAUTION - Catalytic Converter Damage
If the Malfunction Indicator Lamp (MIL) illuminates, potential catalytic converter damage is possible which could result in loss of engine power.
In this case, have your vehicle inspected by an authorized Kia dealer as soon as possible.

Charging System Warning Light

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It remains on until the engine is started.
- When there is a malfunction with either the alternator or electrical charging system.

If there is a malfunction with either the alternator or electrical charging system:
1. Drive carefully to the nearest safe location and stop your vehicle.
2. Turn the engine off and check the alternator drive belt for looseness or breakage.
   If the belt is adjusted properly, there may be a problem in the electrical charging system.
   In this case, have your vehicle inspected by an authorized Kia dealer as soon as possible.
Engine Oil Pressure Warning Light

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It remains on until the engine is started.
- When the engine oil pressure is low.

If the engine oil pressure is low:
1. Drive carefully to the nearest safe location and stop your vehicle.
2. Turn the engine off and check the engine oil level (For more details, refer to “Engine Oil” in chapter 8). If the level is low, add oil as required.
If the warning light remains on after adding oil or if oil is not available, have your vehicle inspected by an authorized Kia dealer as soon as possible.

⚠️ CAUTION - Engine damage
If the engine does not stop immediately after the engine oil pressure warning light is illuminated and stays on while the engine is running, serious engine damage may result.

- If the warning light stays on while the engine is running, it indicates that there may be serious engine damage or malfunction. In this case,
  1. Stop the vehicle as soon as it is safe to do so.
  2. Turn off the engine and check the oil level. If the oil level is low, fill the engine oil to the proper level.
  3. Start the engine again. If the warning light stays on after the engine is started, turn the engine off immediately. In this case, have your vehicle inspected by an authorized Kia dealer.

Low Fuel Level Warning Light

This warning light illuminates:
When the fuel tank is nearly empty.

If the fuel tank is nearly empty:
Add fuel as soon as possible.

⚠️ CAUTION - Low Fuel Level
Driving with the Low Fuel Level warning light on or with the fuel level below “0 or E” can cause the engine to misfire and damage the catalytic converter (if equipped).
Low Tire Pressure Warning Light

This warning light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
  - It illuminates for approximately 3 seconds and then goes off.
- When one or more of your tires are significantly underinflated.

※For more details, refer to “Tire Pressure Monitoring System (TPMS)” in chapter 7.

This warning light remains on after blinking for approximately 60 seconds or repeats blinking and off at the intervals of approximately 3 seconds:
- When there is a malfunction with the TPMS.
  In this case, have your vehicle inspected by an authorized Kia dealer as soon as possible.

※For more details, refer to “Tire Pressure Monitoring System (TPMS)” in chapter 7.

WARNING
- Low tire pressure
  • Significantly low tire pressure makes the vehicle unstable and can contribute to loss of vehicle control and increased braking distances.
  • Continued driving or low pressure tires will cause the tires to overheat and fail.

• The TPMS cannot alert you to severe and sudden tire damage caused by external factors.
• If you notice any vehicle instability, immediately take your foot off the accelerator pedal, apply the brakes gradually with light force, and slowly move to a safe position off the road.
Features of your vehicle

Door Ajar Warning Light
This warning light illuminates: When a door is not closed securely.

Liftgate Open Warning Light
This warning light illuminates: When the liftgate is not closed securely.

Sunroof Open Warning Light (if equipped)
This warning light illuminates: When the sunroof is not closed securely.

Fuel cap open warning indicator (if equipped)
This warning light illuminates: When the fuel filler cap is not tightened securely.
Always make sure that the fuel filler cap is tight.

Forward collision warning (FCW) system OFF/warning indicator (if equipped)
This warning light illuminates:
- When you deactivate this system in the User settings mode in LCD display.
- If this indicator illuminates with warning message in LCD display, there is a malfunction with the Forward collision warning system. In this case, have your vehicle inspected by an authorized Kia dealer.
Features of your vehicle

**Master Warning light (if equipped)**

- This warning light informs the driver the following situations
  - BSD fail (if equipped)
  - TPMS (if equipped)
The Master Warning Light illuminates when more than one of the above warning situations occur.
If the warning situation is solved, the master warning light will be turned off.

**Icy Road Warning Light (if equipped)**

This warning light blinks 10 times and then illuminates, and also warning chime sounds 3 times:
- When the temperature on the Outside Temperature Gauge is below approximately 39.2°F (4°C) with the ignition switch or Engine Start/Stop button in the ON position.

*NOTICE*
If the icy road warning light appears while driving, you should drive more attentively and safely refraining from over-speeding, rapid acceleration, sudden braking or sharp turning, etc.

**Indicator Lights**

**Electronic Stability Control (ESC) Indicator Light**

This indicator light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
- It illuminates for approximately 3 seconds and then goes off.
- When there is a malfunction with the ESC system.
In this case, have your vehicle inspected by an authorized Kia dealer.

This indicator light blinks:
While the ESC is operating.

*For more details, refer to “Electronic Stability Control (ESC)” in chapter 6.
Electronic Stability Control (ESC) OFF Indicator Light

This indicator light illuminates:
- Once you set the ignition switch or Engine Start/Stop Button to the ON position.
- It illuminates for approximately 3 seconds and then goes off.
- When you deactivate the ESC system by pressing the ESC OFF button.

For more details, refer to “Electronic Stability Control (ESC)” in chapter 5.

ECOMINDER® indicator
Active ECO system

This indicator light illuminates:
When the Active ECO button is pressed the ECOMINDER® indicator (green) will illuminate to show that the Active ECO is operating.
For more detailed information, refer to "Active ECO" in chapter 6.

Immobilizer Indicator Light (Without Smart Key) (if equipped)

This indicator light illuminates:
- When the vehicle detects the immobilizer in your key properly while the ignition switch is ON.
- At this time, you can start the engine.
- The indicator light goes off after starting the engine.

This indicator light blinks:
- When there is a malfunction with the immobilizer system.
In this case, have your vehicle inspected by an authorized Kia dealer.
**Features of your vehicle**

**Immobilizer Indicator Light (With Smart Key) (if equipped)**

This indicator light illuminates for up to 30 seconds:

- When the vehicle detects the smart key in the vehicle properly while the Engine Start/Stop Button is ACC or ON.
  - At this time, you can start the engine.
- The indicator light goes off after starting the engine.

This indicator light blinks for a few seconds:

- When the smart key is not in the vehicle.
  - At this time, you cannot start the engine.

This indicator light illuminates for 2 seconds and goes off:

- When the vehicle cannot detect the smart key which is in the vehicle while the Engine Start/Stop Button is ON.
  
  In this case, have your vehicle inspected by an authorized Kia dealer.

This indicator light blinks:

- When the battery of the smart key is weak.
  - At this time, you cannot start the engine. However, you can start the engine if you press the Engine Start/Stop Button with the smart key. (For more details, refer to “Starting the Engine” in chapter 6).
- When there is a malfunction with the immobilizer system.
  
  In this case, have your vehicle inspected by an authorized Kia dealer.

**Turn Signal Indicator Light**

This indicator light blinks:

- When you turn the turn signal light on.

If any of the following occurs, there may be a malfunction with the turn signal system. In this case, have your vehicle inspected by an authorized Kia dealer.

- The indicator light does not blink but illuminates.
- The indicator light blinks more rapidly.
- The indicator light does not illuminate at all.
**High Beam Indicator Light**

This indicator light illuminates:
- When the headlights are on and in the high beam position
- When the turn signal lever is pulled into the Flash-to-Pass position.

**Light ON Indicator Light**

This indicator light illuminates:
- When the tail lights or headlights are on.

**Front Fog Indicator Light (if equipped)**

This indicator light illuminates:
- When the front fog lights are on.

---

**KEY OUT Indicator Light (if equipped)**

When the ENGINE START/STOP button is in the ACC or ON position, if any door is open, the system checks for the smart key.

This indicator light blinks:
When the smart key is not in the vehicle and any door is open with the ignition switch or Engine Start/Stop button in the ACC or ON position.
- At this time, if you close all doors, the chime will also sound for approximately 5 seconds.
- The indicator will go off while the vehicle is moving.

---

**Cruise Indicator Light (if equipped)**

This indicator light illuminates:
- When the cruise control system is enabled.

*For more details, refer to “Cruise Control System” in chapter 6.*
Features of your vehicle

Cruise SET Indicator Light (if equipped)

This indicator light illuminates:
• When the cruise control speed is set.

※For more details, refer to “Cruise Control System” in chapter 6.

FLEX STEER indicator (if equipped)

This indicator light illuminates:
• When you press the FLEX STEER mode button.

※For more details, refer to “FLEX STEER” in chapter 4.

Lane Departure Warning System (LDWS) Indicator Light (if equipped)

This indicator light illuminates:
• [White] When the lane departure warning system does not detect the lane line.
• [Green] When you activate the lane departure warning system by pressing the LDWS button.
• [Yellow] When there is a malfunction with the lane departure warning system.

In this case, have your vehicle inspected by an authorized Kia dealer.

※For more details, refer to “Lane Departure Warning System (LDWS)” in chapter 6.
The rear camera display will activate when the back-up light is ON with the ignition switch ON and the shift lever in the R (Reverse) position.

This system is a supplemental system that helps the driver by displaying objects behind the vehicle when backing up.

Always keep the camera lens clean. If lens is covered with foreign matter, the camera may not operate normally.

The rear camera display is not a safety device. It only serves to assist the driver in identifying objects directly behind the middle of the vehicle. The camera does NOT cover the complete area behind the vehicle. While the camera's display is generally accurate, objects can be much closer than they appear in the display screen and can be distorted in both size and proportion.

**WARNING - Backing up using camera**

Never rely solely on the rear camera display when backing. You must always use methods of viewing the area behind you including looking over both shoulders as well as continuously checking all three rear view mirrors. Due to the difficulty of ensuring that the area behind you remains clear, always back slowly and stop immediately if you even suspect that a person, and especially a child, might be behind you.
Features of your vehicle

LIGHTING

Headlamp escort (if equipped)
If you turn the ignition switch to the ACC or OFF position with the headlights ON, the headlights remain on for about 5 minutes. However, if the driver's door is opened and closed, the headlights are turned off after 15 seconds.
The headlights can be turned off by pressing the lock button on the transmitter (or smart key) twice or turning the light switch to the OFF or Auto position. However, if you turn the light switch to the Auto position when it is dark outside, the headlights will not be turned off immediately.

Battery saver function
- The purpose of this feature is to prevent the battery from being discharged. The system automatically turns off the parking lights when the driver removes the ignition key and opens the driver-side door (in that order).
- With this feature, the parking lights will turn off automatically if the driver parks on the side of the road at night.
If necessary, to keep the lights on when the ignition key is removed, perform the following:
1) Open the driver-side door.
2) Turn the parking lights OFF and ON again using the light switch on the steering column.

Daytime running light (if equipped)
The Daytime Running Lights (DRL) can make it easier for others to see the front of your vehicle during the day. DRL can be helpful in many different driving conditions, and it is especially helpful after dawn and before sunset.
The DRL system turns OFF when:
1. The headlight switch is ON.
2. The engine is OFF.
3. The front fog light is ON.
4. Engaging the Parking Brake
Lighting control

The light switch has a Headlight and a Parking light position. To operate the lights, turn the knob at the end of the control lever to one of the following positions:

1) OFF position
2) Parking light position
3) Headlight position
4) Auto light position (if equipped)

Parking light position

When the light switch is in the parking light position (1st position), the tail, license and instrument panel lights will turn ON.

Headlight position

When the light switch is in the headlight position (2nd position), the head, tail, license and instrument panel lights will turn ON. The ignition switch must be in the ON position to turn on the headlights.
Auto light position (if equipped)

When the light switch is in the AUTO light position, the taillights and headlights will be turned ON or OFF automatically depending on the amount of light outside the vehicle.

- Never place anything over sensor (1) located on the instrument panel. This will ensure better auto-light system control.
- Don’t clean the sensor using a window cleaner. The cleaner may leave a light film which could interfere with sensor operation.
- If your vehicle has window tint or other types of metallic coating on the front windshield, the Auto light system may not work properly.

High beam operation

To turn on the high beam headlights, push the lever away from you. The lever will return to its original position.

The high beam indicator will light when the headlight high beams are switched on.

To prevent the battery from being discharged, do not leave the lights on for a prolonged time while the engine is not running.
To flash the headlights, pull the lever towards you. It will return to the normal (low beam) position when released. The headlight switch does not need to be on to use this flashing feature.

**WARNING - High beams**

Do not use high beam when there are other vehicles. Using high beam could obstruct the other driver’s vision.

**Turn signals and lane change signals**

The ignition switch must be on for the turn signals to function. To turn on the turn signals, move the lever up or down (A). The green arrow indicators on the instrument panel indicate which turn signal is operating. They will self-cancel after a turn is completed. If the indicator continues to flash after a turn, manually return the lever to the OFF position.

To signal a lane change, move the turn signal lever slightly and hold it in position (B). The lever will return to the OFF position when released.

If an indicator stays on and does not flash or if it flashes abnormally, one of the turn signal bulbs may be burned out and will require replacement.

If an indicator flash is abnormally quick or slow, a bulb may be burned out or have a poor electrical connection in the circuit.
One-touch lane change function

To activate an one-touch lane change function, move the turn signal lever slightly and then release it. The lane change signals will blink 3, 5 or 7 times.

You can choose one-touch lane change blinking function in “One touch turn lamp” of “User setting”. Refer to “User setting” in chapter 4.

NOTICE

If an indicator flash is abnormally quick or slow, the bulb may be burned out or have a poor electrical connection in the circuit.

Front fog light (if equipped)

Fog lights are used to provide improved visibility when visibility is poor due to fog, rain or snow, etc. The fog lights will turn on when the fog light switch (1) is turned to the ON position after the headlight is turned on.

To turn off the fog lights, turn the fog light switch (1) to the OFF position.

When in operation, the fog lights consume large amounts of vehicle electrical power. Only use the fog lights when visibility is poor.
Wipers and Washers

Windshield wiper/washer

A: Wiper speed control
- MIST - Single wipe
- OFF - Off
- INT - Intermittent wipe
- LO - Low wiper speed
- HI - High wiper speed

B: Intermittent wipe time adjustment

C: Wash with brief wipes (front)

Rear window wiper/washer (if equipped)

D: Rear wiper/washer control
- ON - Continuous wipe
- INT - Intermittent wipe (if equipped)
- OFF - Off

E: Wash with brief wipes (rear)

Windshield wipers

Operates as follows when the ignition switch is turned ON.

MIST: For a single wiping cycle, push the lever upward and release it with the lever in the OFF position. The wipers will operate continuously if the lever is pushed upward and held.

OFF: Wiper is not in operation

INT: Wiper operates intermittently at the same wiping intervals. Use this mode in light rain or mist. To vary the speed setting, turn the speed control knob (1).
Features of your vehicle

LO : Normal wiper speed
HI : Fast wiper speed

* NOTICE
If there is heavy accumulation of snow or ice on the windshield, defrost the windshield for about 10 minutes, or until the snow and/or ice is removed before using the windshield wipers to ensure proper operation. If you do not remove the snow and/or ice before using the wiper and washer, it may damage the wiper and washer system.

Windshield washers

In the OFF position, pull the lever gently toward you to spray washer fluid on the windshield and to run the wipers 1-3 cycles.
Use this function when the windshield is dirty.
The spray and wiper operation will continue until you release the lever.
If the washer does not work, check the washer fluid level. If the fluid level is not sufficient, you will need to add appropriate non-abrasive windshield washer fluid to the washer reservoir.

The reservoir filler neck is located in the front of the engine compartment on the passenger side.

⚠️ CAUTION - Washer pump
To prevent possible damage to the washer pump, do not operate the washer when the fluid reservoir is empty.

⚠️ WARNING - Obscured visibility
Do not use the washer in freezing temperatures without first warming the windshield with the defrosters; the washer solution could freeze on the windshield and obscure your vision.
Features of your vehicle

CAUTION

- Wipers & windshields shields
  - To prevent possible damage to the wipers or windshield, do not operate the wipers when the windshield is dry.
  - To prevent damage to the wiper blades, do not use gasoline, kerosene, paint thinner, or other solvents on or near them.
  - To prevent damage to the wiper arms and other components, do not attempt to move the wipers manually.

Rear window wiper and washer switch (if equipped)

The rear window wiper switch is located at the end of the wiper and washer switch lever. Turn the switch to the desired position to operate the rear wiper and washer.

ON - Normal wiper operation
INT - Intermittent wiper operation (if equipped)
OFF - Wiper is not in operation

Push the lever away from you to spray rear washer fluid and to run the rear wipers 1~3 cycles. The spray and wiper operation will continue until you release the lever.
Features of your vehicle

**INTERIOR LIGHT**

Do not use the interior lights for extended periods when the engine is not running. It may cause battery discharge.

**WARNING - Interior light**

Do not use the interior lights when driving in the dark. The glare from the interior lights may obstruct your view and cause an accident.

**Interior lamp AUTO cut**

- When all entrances are closed, if you lock the vehicle by using the transmitter or the smart key, all interior lamp will be off after a few seconds.
- If you do not operate anything in the vehicle after turning off the engine, the lights will turn off after 20 minutes.

**Map lamp**

Press the lens (1) or button (1) to turn the map lamp on or off.
• ROOM (2):
  - The map lamp and room lamp stays on at all times.
  - To turn off the ROOM mode, press the ROOM button (2) once again (not pressed.)

• DOOR (3):
  - The map lamp and room lamp comes on when a door is opened. The lamps go out after approximately 30 seconds.
  - The map lamp and room lamp comes on for approximately 30 seconds when doors are unlocked with a transmitter or smart key as long as the doors are not opened.
  - The map lamp and room lamp will stay on for approximately 20 minutes if a door is opened with the ignition switch in the ACC or LOCK/OFF position.
  - The map lamp and room lamp will stay on continuously if the door is opened with the ignition switch in the ON position.

- The map lamp and room lamp will go out immediately if the ignition switch is changed to the ON position or all doors are locked.
- To turn off the DOOR mode, press the DOOR button (3) once again (not pressed).

★ NOTICE
- When the lamp is turned on by pressing the lens (1), the lamp does not turn off even if the DOOR mode or ROOM mode is not selected (not pressed).
- If the ROOM button and DOOR button are pressed at the same time, the map lamp and room lamp will stay on at all times (ROOM mode will be selected).

Room lamp

Press the button to turn the light on or off.
If the front map lamp turns on by the front map lamp switch, the room lamp will turn on.
Features of your vehicle

Luggage room lamp

- Type A
- Type B

The luggage room lamp comes on when the liftgate is opened. The lamp comes on as long as the liftgate is open. To prevent unnecessary charging system drain, close the liftgate securely after using the luggage room.

Portable lamp usage (if equipped)

1. Press push button (1).
2. Pull out the lamp holder.
3. Press the power switch (2).

※ If the portable lamp does not turn on, it means the portable lamp needs to be charged. Insert the lamp holder and then charge it again. The charge mode will be activated if the ignition switch (or engine start/stop button) is in position or engine is running.

In-vehicle lamp, if necessary, after separation can be used as a portable.

1. Press push button (1).
2. Pull out the lamp holder.
3. Press the power switch (2).
**CAUTION - Portable lamp damage**

You can use the regular batteries (Disposable batteries) but do not use the Non-rechargeable battery in charge mode. It may damage the vehicle.

**NOTICE**

1. Remove the batteries when not in use for a long time.
2. Use the specified battery.
3. Do not place the lamp with water or moist places and liquid compounds. These can cause internal leakage of a battery.
4. When replacing the batteries, check the direction and insert. It will not be charged if installed reversely.
5. Do not mix the rechargeable batteries. It may not be charged normally.

If the portable lamp does not turn on anymore after charged, replace the rechargeable batteries.

**Battery replacement**

When replacement is necessary, use the following procedure.

1. Insert a slim tool into the slot and gently try open the battery cover.
2. Replace the batteries with new rechargeable batteries (AAA size). When replacing the batteries, make sure the position of batteries.
3. Close the cover carefully.
Features of your vehicle

**Glove box lamp (if equipped)**

The glove box lamp comes on when the glove box is opened. To prevent unnecessary charging system drain, close the glove box securely after using the glove box.

**Vanity mirror lamp (if equipped)**

Pull the sunvisor downward and you can turn the vanity mirror lamp ON or OFF by pushing the button.
- : To turn the lamp ON.
- O : To turn the lamp OFF.

To prevent unnecessary charging system drain, turn off the lamp by pushing the O button after using the lamp.
DEFROSTER

⚠️ CAUTION - Conductors
To prevent damage to the conductors bonded to the inside surface of the rear window, never use sharp instruments or window cleaners containing abrasives to clean the window.

※ NOTICE
If you want to defrost and defog the front windshield, refer to “Windshield defrosting and defogging” in this section.

The defroster heats the window to remove frost, fog and thin ice from the rear window, while the engine is running.

To activate the rear window defroster, press the rear window defroster button located in the center facia switch panel.

The indicator on the rear window defroster button illuminates when the defroster is ON.

If there is heavy accumulation of snow on the rear window, brush it off before operating the rear defroster.

The rear window defroster automatically turns off after approximately 20 minutes or when the ignition switch is turned off. To turn off the defroster, press the rear window defroster button again.
Features of your vehicle

Outside rearview mirror defroster (if equipped)
If your vehicle is equipped with the outside rearview mirror defrosters, they will operate at the same time you turn on the rear window defroster.

Front wiper deicer (if equipped)
The front wiper deicer will operate at the same time you turn on the front windshield defroster.
• To turn off the wiper deicer, press the front windshield defroster button again.
• The front wiper deicer automatically turns off after approximately 20 minutes or when the ignition switch is turned off.
Features of your vehicle

MANUAL CLIMATE CONTROL SYSTEM

1. Fan speed control knob
2. Air intake control button
3. Mode selection knob
4. Rear window defroster button
5. Temperature control knob
6. Air conditioning button (if equipped)
Features of your vehicle

**Heating and air conditioning**

1. Start the engine.
2. Set the mode to the desired position.
   - For improving the effectiveness of heating and cooling:
     - Heating: 🍂
     - Cooling: 🍃
3. Set the temperature control to the desired position.
4. Set the air intake control to the outside (fresh) air position.
5. Set the fan speed control to the desired speed.
6. If air conditioning is desired, turn the air conditioning system (if equipped) on.
Mode selection

The mode selection knob controls the direction of the air flow through the ventilation system. Air can be directed to the floor, dashboard outlets, or windshield. Five symbols are used to represent.

Vent mode (B, D)
Air flow is directed toward the upper body and face. Additionally, each outlet can be controlled to direct the air discharged from the outlet.

Vent-Floor mode (B, D, C, E)
Air flow is directed towards the face and the floor.

Floor mode (C, E, A, D)
Most of the air flow is directed to the floor, with a small amount of the air being directed to the windshield and side window defrosters.

Floor/Defrost mode (A, C, E, D)
Most of the air flow is directed to the floor and the windshield with a small amount directed to the side window defrosters.

Defrost mode (A, D)
Most of the air flow is directed to the windshield with a small amount of air directed to the side window defrosters.
Features of your vehicle

**Instrument panel vents**
The outlet vents can be opened or closed separately using the thumb-wheel.
Also, you can adjust the direction of air delivery from these vents using the vent control lever as shown.

**Temperature control**
The temperature control knob allows you to control the temperature of the air flow from the ventilation system.
To change the air temperature in the passenger compartment, turn the knob to the right position for warm air or left position for cooler air.

To operate the MAX A/C, turn the temperature knob to extreme left. Air flow is directed toward the upper body and face.
In this mode, the air conditioning and the recirculated air position will be selected automatically.
**Air intake control**

The air intake control is used to select the outside (fresh) air position or recirculated air position.

To change the air intake control position, press the control button.

**Recirculated air position**

With the recirculated air position selected, air from the passenger compartment will be drawn through the heating system and heated or cooled according to the function selected.

*NOTICE*

- According to the outside temperature if the recirculation air position is on for a long time, the air intake position will automatically change to the outside (fresh) air position to ventilate the inside air.
- To cancel the automatic outside (fresh) air position, do the following.
  1. Turn the ignition switch to the ON position.
  2. Set the mode to the position.
  3. Press the air intake control button more than 3 seconds.

**Outside (fresh) air position**

With the outside (fresh) air position selected, air enters the vehicle from outside and is heated or cooled according to the function selected.

Prolonged operation of the heater in the recirculated air position (without air conditioning selected) may cause fogging of the windshield and side windows and the air within the passenger compartment may become stale.

In addition, prolonged use of the air conditioning with the recirculated air position selected will result in excessively dry air in the passenger compartment.
**Features of your vehicle**

**WARNING - Recirculated air**
Continuous use of the climate control system in the recirculated air position can cause drowsiness or sleepiness, and loss of vehicle control. Set the air intake control to the outside (fresh) air position as much as possible while driving.

**WARNING - Sleeping with AC on**
Do not sleep in a vehicle with the air conditioning or heating system on as this may cause serious harm or death due to a drop in the oxygen level and/or body temperature.

**WARNING - Reduced visibility**
Continued use of the climate control system in the recirculated air position may allow humidity to increase inside the vehicle which may fog the glass and obscure visibility.

**Sunroof inside air recirculation (if equipped)**
If the sunroof opens while the heater or Air Conditioning system operates, the outside (fresh) air will be selected automatically for ventilating the car. Then, if you select the recirculated air position, the outside (fresh) air will be selected automatically after 3 minutes. If you close the sunroof, the intake mode will be changed to the previous selected mode.

**Fan speed control**

The ignition switch must be in the ON position for fan operation. The fan speed knob allows you to control the fan speed of the air flow from the ventilation system. To change the fan speed, turn the knob to the right for higher speed, or left for lower speed.
To turn off the blowers

To turn off the blowers, turn the fan speed control knob to the “0” position.

Air conditioning (if equipped)

Press the A/C button to turn the air conditioning system on (indicator light will illuminate). Press the button again to turn the air conditioning system off.

System operation

Ventilation
1. Set the mode to the 🌞 position.
2. Set the air intake control to the outside (fresh) air position.
3. Set the temperature control to the desired position.
4. Set the fan speed control to the desired speed.

Heating
1. Set the mode to the 🌞 position.
2. Set the air intake control to the outside (fresh) air position.
3. Set the temperature control to the desired position.
4. Set the fan speed control to the desired speed.
5. If dehumidified heating is desired, turn the air conditioning system (if equipped) on.

• If the windshield fogs up, set the mode to the 🌞 or 🌬️ position.
Features of your vehicle

Operation Tips

- To keep dust or unpleasant fumes from entering the vehicle through the ventilation system, temporarily set the air intake control to the recirculated air position. Be sure to return the control to the fresh air position when the irritation has passed to keep fresh air in the vehicle. This will help keep the driver alert and comfortable.
- Air for the heating/cooling system is drawn in through the grilles just ahead of the windshield. Care should be taken that these are not blocked by leaves, snow, ice or other obstructions.
- To prevent interior fog on the windshield, set the air intake control to the fresh air position and fan speed to the desired position, turn on the air conditioning system, and adjust the temperature control to desired temperature.

Air conditioning (if equipped)

All Kia Air Conditioning Systems are filled with R-1234yf refrigerant.

1. Start the engine. Press the air conditioning button.
2. Set the mode to the \( \mathbb{H} \) position.
3. Set the air intake control to the outside air or recirculated air position.
4. Adjust the fan speed control and temperature control to maintain maximum comfort.

- When maximum cooling is desired, set the temperature control to the extreme left position, set the mode control to the MAX A/C position, then set the fan speed control to the highest speed.

⚠️ CAUTION - Excessive A/C

- When using the air conditioning system, monitor the temperature gauge closely while driving up hills or in heavy traffic when outside temperatures are high. Air conditioning system operation may cause engine overheating. Continue to use the blower fan but turn the air conditioning system off if the temperature gauge indicates engine overheating.
- When opening the windows in humid weather air conditioning may create water droplets inside the vehicle. Since excessive water droplets may cause damage to electrical equipment, air conditioning should only be used with the windows closed.
Air conditioning system operation tips

- If the vehicle has been parked in direct sunlight during hot weather, open the windows for a short time to let the hot air inside the vehicle escape.
- To help reduce moisture inside of the windows on rainy or humid days, decrease the humidity inside the vehicle by operating the air conditioning system.
- During air conditioning system operation, you may occasionally notice a slight change in engine speed as the air conditioning compressor cycles. This is a normal system operation characteristic.
- Use the air conditioning system every month only for a few minutes to ensure maximum system performance.

- When using the air conditioning system, you may notice clear water dripping (or even puddling) on the ground under the passenger side of the vehicle. This is a normal system operation characteristic.
- Operating the air conditioning system in the recirculated air position provides maximum cooling, however, continual operation in this mode may cause the air inside the vehicle to become stale.
- During cooling operation, you may occasionally notice a misty air flow because of rapid cooling and humid air intake. This is a normal system operation characteristic.

Climate control air filter (if equipped)

The climate control air filter installed behind the glove box filters the dust or other pollutants that come into the vehicle from the outside through the heating and air conditioning system. If dust or other pollutants accumulate in the filter over a period of time, the air flow from the air vents may decrease, resulting in moisture accumulation on the inside of the windshield even when the outside (fresh) air position is selected. If this happens, have the climate control air filter replaced by an authorized Kia dealer.
Features of your vehicle

* NOTICE

• Replace the filter every 15,000 miles or once a year. If the vehicle is being driven in severe conditions such as dusty or rough roads, more frequent air conditioner filter inspections and changes are required.
• When the air flow rate suddenly decreases, the system should be checked at an authorized Kia dealer.

Air Conditioning refrigerant label

The actual Air Conditioning refrigerant label in the vehicle may differ from the illustration.

Each symbols and specification on air conditioning refrigerant label means as below;

1. Classification of refrigerant
2. Amount of refrigerant
3. Classification of Compressor lubricant

* Refer to chapter 8 for more detail location of air conditioning refrigerant label.

CAUTION - Proper Oil & Refrigerant

It is important that the correct type and amount of oil and refrigerant is used, otherwise damage to the vehicle and injury may occur. To prevent damage, the air conditioning system in your vehicle should only be serviced by trained and certified technicians.
Checking the amount of air conditioner refrigerant and compressor lubricant

When the amount of refrigerant is low, the performance of the air conditioning is reduced. Overfilling also has a negative impact on the air conditioning system. Therefore, if abnormal operation is found, have the system inspected by an authorized Kia dealer.

NOTICE

It is important that the correct type and amount of oil and refrigerant is used. Otherwise, damage to the compressor and abnormal system operation may occur.

WARNING

The oil and refrigerant in your vehicle’s air conditioning system is under very high pressure. If proper service procedures are not followed an explosion may result. To reduce the risk of serious injury or death, the air conditioning system in your vehicle should only be serviced by trained and certified technicians.
Features of your vehicle

AUTOMATIC CLIMATE CONTROL SYSTEM (IF EQUIPPED)

■ Type A

1. Temperature control button / knob
2. Front windshield defroster button
3. Rear windshield defroster button
4. Climate control display
5. Air intake control button
6. Air conditioning button
7. Fan speed control button
8. AUTO (automatic control) button
9. OFF button
10. Mode selection button
11. Climate control information screen selection button

■ Type B

OPS043162/OPS043163
Automatic heating and air conditioning

1. Push the AUTO button. It is indicated by AUTO on the display. The modes, fan speeds, air intake and air-conditioning will be controlled automatically by temperature setting.

2. Push the temperature control button to set the desired temperature. (Type A)
   Turn the temperature control knob to set the desired temperature. (Type B)

• To turn the automatic operation off, select any button or switch of the following:
  - Mode selection button
  - Air conditioning button
  - Front windshield defroster button (Press the button one more time to deselect the front windshield defroster function. The ‘AUTO’ sign will illuminate on the information display once again.)
  - Air intake control button
  - Fan speed control switch
   The selected function will be controlled manually while other functions operate automatically.

• Regardless of the temperature setting, when using automatic operation, the air conditioning system can automatically turn on to decrease the humidity inside the vehicle, even if the temperature is set to warm.
Never place anything over the sensor located on the instrument panel to ensure better control of the heating and cooling system.

**Manual heating and air conditioning**

The heating and cooling system can be controlled manually by pushing buttons other than the AUTO button. In this case, the system works sequentially according to the order of buttons selected.

When pressing any button (or turning any knob) except AUTO button while automatic operation, the functions not selected will be controlled automatically.

1. Start the engine.
2. Set the mode to the desired position.
3. Set the temperature control to the desired position.
4. Set the air intake control to the outside (fresh) air position.
5. Set the fan speed control to the desired speed.
6. If air conditioning is desired, turn the air conditioning system on.

Press the AUTO button in order to convert to full automatic control of the system.

**Mode selection**

The mode selection button controls the direction of the air flow through the ventilation system.

Refer to the illustration in the "Manual climate control system".
The air flow outlet port is converted as follows:

Vent mode (B, D)
Air flow is directed toward the upper body and face. Additionally, each outlet can be controlled to direct the air discharged from the outlet.

Floor mode (C, E, A, D)
Most of the air flow is directed to the floor, with a small amount of the air being directed to the windshield and side window defroster.

Vent-Floor mode (B, D, C, E)
Air flow is discharged towards the face and floor.

Floor/Defrost mode (A, C, E, D)
Most of the air flow is directed to the floor and the windshield with a small amount directed to the side window defrosters.
Features of your vehicle

Defrost mode (A, D)
Most of the air flow is directed to the windshield with a small amount of air directed to the side window defrosters.

Instrument panel vents
The outlet port can be opened or closed separately using the thumb-wheel.
Also, you can adjust the direction of air delivered from these vents using the vent control lever as shown.

Temperature control

- Type A
The temperature will increase to the maximum (HI) by pushing the button (∧).
The temperature will decrease to the minimum (Lo) by pushing the button (✓).
When pushing the button, the temperature will increase or decrease by 0.5°C/1°F. When set to the lowest temperature setting, the air conditioning will operate continuously.

• Type B
The temperature will increase to the maximum (HI) by turning the knob to the right extreme.
The temperature will decrease to the minimum (Lo) by turning the knob to the left extreme.
When turning the knob, the temperature will increase or decrease by 0.5°C/1°F. When set to the lowest temperature setting, the air conditioning will operate continuously.

Temperature scale conversion
If the battery has been discharged or disconnected, the temperature mode display will reset to Centigrade.
This is normal condition. You can switch the temperature scale as follows:
While pressing the OFF button, press the AUTO button for 3 seconds or more. The temperature scale will change from Centigrade to Fahrenheit, or from Fahrenheit to Centigrade.
The temperature unit (from °C to °F or from °F to °C) can be changed by using the “User Settings” mode of the LCD display.

Air intake control
This is used to select outside (fresh) air position or recirculated air position.
To change the air intake control position, push the control button.
Features of your vehicle

Recirculated air position

The indicator light on the button illuminates when the recirculated air position is selected.

With the recirculated air position selected, air from passenger compartment will be drawn through the heating system and heated or cooled according to the function selected.

✽ NOTICE
• According to the outside temperature if the recirculation air position is on for a long time, the air intake position will automatically change to the outside (fresh) air position to ventilate the inside air.
• To cancel the automatic outside (fresh) air position, do the following.
  1. Turn the ignition switch to the ON position.
  2. Set the mode to the position.
  3. Press the air intake control button more than 3 seconds.

Outside (fresh) air position

The indicator light on the button does not illuminate when the outside (fresh) air position is selected.

With the outside (fresh) air position selected, air enters the vehicle from outside and is heated or cooled according to the function selected.

Prolonged operation of the heater in the recirculated air position (without air conditioning selected) may cause fogging of the windshield and side windows and the air within the passenger compartment may become stale.

In addition, prolonged use of the air conditioning with the recirculated air position selected will result in excessively dry air in the passenger compartment.
Features of your vehicle

**WARNING - Recirculated air**
Continuous use of the climate control system in the recirculated air position can cause drowsiness or sleepiness, and loss of vehicle control. Set the air intake control to the outside (fresh) air position as much as possible while driving.

**WARNING - Reduced visibility**
Continued climate control system operation in the recirculated air position may allow humidity to increase inside vehicle which may fog the glass and obscure visibility.

**WARNING - Sleeping with AC on**
Do not sleep in a vehicle with the air conditioning or heating system on as this may cause serious harm or death due to a drop in the oxygen level and/or body temperature.

**Sunroof inside air recirculation (if equipped)**
If the sunroof opens while the heater or Air Conditioning system operates, the outside (fresh) air will be selected automatically for ventilating the car. Then, if you select the recirculated air position, the outside (fresh) air will be selected automatically after 3 minutes.

If you close the sunroof, the intake mode will be changed to the previous selected mode.
Features of your vehicle

**Fan speed control**

*Type A*

The fan speed can be set to the desired speed by pressing the fan speed control button.

*Type B*

To change the fan speed, press the button (✿) for higher speed, or push the button (✧) for lower speed. To turn the fan speed control off, press the OFF button and select outside (fresh) air position.

**Air conditioning**

*Type A*

Push the A/C button to turn the air conditioning system on (indicator light will illuminate). Push the button again to turn the air conditioning system off.
Features of your vehicle

**Blower OFF**
- Type A
- Type B

Push the OFF button to turn off the blower. However, you can still operate the mode and air intake buttons as long as the ignition switch is in the position ON.

**Climate information screen selection (if equipped)**
- Type B

Press the climate information screen selection button to view climate information in full screen mode.

**System operation**

**Ventilation**
1. Set the mode to the 🍃 position.
2. Set the air intake control to the outside (fresh) air position.
3. Set the temperature control to the desired position.
4. Set the fan speed control to the desired speed.

**Heating**
1. Set the mode to the 🍃 position.
2. Set the air intake control to the outside (fresh) air position.
3. Set the temperature control to the desired position.
4. Set the fan speed control to the desired speed.
5. If dehumidified heating is desired, turn the air conditioning system (if equipped) on.

- If the windshield fogs up, set the mode to the 🍃 or 🌡️ position.
Operation Tips

- To keep dust or unpleasant fumes from entering the vehicle through the ventilation system, temporarily set the air intake control to the recirculated air position. Be sure to return the control to the fresh air position when the irritation has passed to keep fresh air in the vehicle. This will help keep the driver alert and comfortable.
- Air for the heating/cooling system is drawn in through the grilles just ahead of the windshield. Care should be taken that these are not blocked by leaves, snow, ice or other obstructions.
- To prevent interior fog on the windshield, set the air intake control to the fresh air position and fan speed to the desired position, turn on the air conditioning system, and adjust the temperature control to desired temperature.

Air conditioning (if equipped)

All Kia Air Conditioning Systems are filled with R-1234yf refrigerant.

1. Start the engine. Press the air conditioning button.
2. Set the mode to the position.
3. Set the air intake control to the outside air or recirculated air position.
4. Adjust the fan speed control and temperature control to maintain maximum comfort.

- When maximum cooling is desired, set the temperature control to the extreme left position, set the mode control to the MAX A/C position, then set the fan speed control to the highest speed.

⚠️ CAUTION - Excessive A/C

- When using the air conditioning system, monitor the temperature gauge closely while driving up hills or in heavy traffic when outside temperatures are high. Air conditioning system operation may cause engine overheating. Continue to use the blower fan but turn the air conditioning system off if the temperature gauge indicates engine overheating.

- When opening the windows in humid weather air conditioning may create water droplets inside the vehicle. Since excessive water droplets may cause damage to electrical equipment, air conditioning should only be used with the windows closed.
Air conditioning system operation tips

- If the vehicle has been parked in direct sunlight during hot weather, open the windows for a short time to let the hot air inside the vehicle escape.
- To help reduce moisture inside of the windows on rainy or humid days, decrease the humidity inside the vehicle by operating the air conditioning system.
- During air conditioning system operation, you may occasionally notice a slight change in engine speed as the air conditioning compressor cycles. This is a normal system operation characteristic.
- Use the air conditioning system every month only for a few minutes to ensure maximum system performance.
- When using the air conditioning system, you may notice clear water dripping (or even puddling) on the ground under the passenger side of the vehicle. This is a normal system operation characteristic.
- Operating the air conditioning system in the recirculated air position provides maximum cooling; however, continual operation in this mode may cause the air inside the vehicle to become stale.
- During cooling operation, you may occasionally notice a misty air flow because of rapid cooling and humid air intake. This is a normal system operation characteristic.

Climate control air filter (if equipped)

The climate control air filter installed behind the glove box filters the dust or other pollutants that come into the vehicle from the outside through the heating and air conditioning system. If dust or other pollutants accumulate in the filter over a period of time, the air flow from the air vents may decrease, resulting in moisture accumulation on the inside of the windshield even when the outside (fresh) air position is selected. If this happens, have the climate control air filter replaced by an authorized Kia dealer.
Features of your vehicle

* NOTICE

• Replace the filter every 15,000 miles or once a year. If the vehicle is being driven in severe conditions such as dusty or rough roads, more frequent air conditioner filter inspections and changes are required.

• When the air flow rate suddenly decreases, the system should be checked at an authorized Kia dealer.

Air Conditioning refrigerant label

The actual Air Conditioning refrigerant label in the vehicle may differ from the illustration.

Each symbols and specification on air conditioning refrigerant label means as below:

1. Classification of refrigerant
2. Amount of refrigerant
3. Classification of Compressor lubricant

* Refer to chapter 8 for more detail location of air conditioning refrigerant label.

CAUTION - Proper Oil & Refrigerant

It is important that the correct type and amount of oil and refrigerant is used, otherwise damage to the vehicle may occur. To prevent damage, the air conditioning system in your vehicle should only be serviced by trained and certified technicians.
Checking the amount of air conditioner refrigerant and compressor lubricant

When the amount of refrigerant is low, the performance of the air conditioning is reduced. Overfilling also has a negative impact on the air conditioning system. Therefore, if abnormal operation is found, have the system inspected by an authorized Kia dealer.

✽ NOTICE
It is important that the correct type and amount of oil and refrigerant is used. Otherwise, damage to the compressor and abnormal system operation may occur.

⚠️ WARNING
The oil and refrigerant in your vehicle's air conditioning system is under very high pressure. If proper service procedures are not followed an explosion may result. To reduce the risk of serious injury or death, the air conditioning system in your vehicle should only be serviced by trained and certified technicians.
WINDSHIELD DEFROSTING AND DEFOGGING

**WARNING - Windshield heating**
Do not use the ⌀ or ♂ position during cooling operation in extremely humid weather. The difference between the temperature of the outside air and that of the windshield could cause the outer surface of the windshield to fog up, causing loss of visibility. In this case, set the mode selection knob or button to the ⌀ position and fan speed control knob or button to the lower speed.

- For maximum defrosting, set the temperature control to the extreme right/hot position and the fan speed control to the highest speed.
- If warm air to the floor is desired while defrosting or defogging, set the mode to the floor-defrost position.
- Before driving, clear all snow and ice from the windshield, rear window, outside rear view mirrors, and all side windows.
- Clear all snow and ice from the hood and air inlet in the cowl grille to improve heater and defroster efficiency and to reduce the probability of fogging up inside of the windshield.

**Manual climate control system**

*To defog inside windshield*

1. Select any fan speed except “0” position.
2. Select desired temperature.
3. Select the ⌀ or ♂ mode.
4. The outside (fresh) air and air conditioning will be selected automatically.

If the air conditioning and outside (fresh) air position are not selected automatically, press the corresponding button manually.
**Features of your vehicle**

**To defrost outside windshield**

1. Set the fan speed to the highest (extreme right) position.
2. Set the temperature to the extreme hot position.
3. Select the position.
4. The outside (fresh) air and air conditioning will be selected automatically.

**Automatic climate control system**

**To defog inside windshield**

1. Set the fan speed to the desired position.
2. Select desired temperature.
3. Press the defrost button ( ).
4. The air-conditioning will be turned on according to the detected ambient temperature, outside (fresh) air position and higher fan speed will be selected automatically.

If the air-conditioning, outside (fresh) air position and higher fan speed are not selected automatically, adjust the corresponding button or knob manually.

If the position is selected, with a low fan speed, a higher fan speed may be automatically selected.
Features of your vehicle

**To defrost outside windshield**

1. Set fan speed to the highest position.
2. Set temperature to the Maximum (HI).
3. Press the defrost button ( ).
4. The air-conditioning will be turned on according to the detected ambient temperature and outside (fresh) air position will be selected automatically. If the position is selected, with a low fan speed, a higher fan speed may be automatically selected.

**Defogging logic**

To reduce the possibility of fogging up the inside of the windshield, the air intake or air conditioning are controlled automatically according to certain conditions such as or position. To cancel or return to the defogging logic, do the following.
**Manual climate control system**

1. Turn the ignition switch to the ON position.
2. Turn the mode selection knob to the defrost position ( ).
3. Within 10 seconds after selecting the defrost position, press the air intake control button ( ) at least 5 times within 3 seconds.

The indicator on the air intake button blinks 3 times with 0.5 seconds of interval. It indicates that the defogging logic is canceled or returned to the programmed status.

If the battery has been discharged or disconnected, it will be reset to the defog logic status.

---

**Automatic climate control system**

1. Turn the ignition switch to the ON position.
2. Press the defrost button ( ).
3. While pressing the air conditioning button (A/C), press the air intake control button ( ) at least 5 times within 3 seconds.

The indicator on the air intake button blinks 3 times with 0.5 seconds of interval. It indicates that the defogging logic is canceled or returned to the programmed status.

If the battery has been discharged or disconnected, it will be reset to the defog logic status.
When the ignition switch is in the ON position, the clean air function turns on automatically. Also, the clean air function turns off automatically, when the ignition switch turns to the OFF position.
Features of your vehicle

STORAGE COMPARTMENT
These compartments can be used to store small items.

- To avoid possible theft, do not leave valuables in the storage compartment.
- Always keep the storage compartment covers closed while driving. Do not attempt to place so many items in the storage compartment that the storage compartment cover cannot close securely.

⚠️ WARNING - Flammable materials
Do not store, propane cylinders or other flammable/explosive materials in the vehicle. These items may catch fire and/or explode if the vehicle is exposed to hot temperatures for extended periods.

Center console storage

These compartments can be used to store small items required by the driver or front passenger.

To open the center console storage, pull up the lever. (Type B)

Glove box

To open the glove box, push the button and the glove box will automatically open. Close the glove box after use.

Always keep the glove box closed while the vehicle is in operation.

⚠️ WARNING - Glove box
To reduce the risk of injury in an accident or sudden stop, always keep the glove box door closed while driving.
Features of your vehicle

Cool box (if equipped)

You can keep beverage cans or other items cool in the glove box.
1. Turn on the air conditioning.
2. Slide the open/close lever of the vent installed in the glove box to the open position.
3. When the cool box is not used, slide the lever to the closed position.

If some items in the cool box block the vent, the cooling effectiveness of the coolbox is reduced.

✽ NOTICE
Do not put perishable food in the cool box because it may not maintain the necessary consistent temperature to keep the food fresh.

✽ NOTICE
If the temperature control knob is in the warm or hot position, warm or hot air will flow into the glove box.

Sunglass holder

To open the sunglass holder, press the cover and the holder will slowly open. Place your sunglasses with the lenses facing out.

To close the sunglass holder, push it up.

Do not place other items in the sunglass holder.
Features of your vehicle

WARNING - Sunglass holder

- Do not keep objects except sunglasses inside the sunglass holder. Such objects can be thrown from the holder in the event of a sudden stop or an accident, possibly injuring the passengers in the vehicle.
- Do not open the sunglass holder while the vehicle is moving. The rear view mirror of the vehicle can be blocked by an opened sunglass holder.

Luggage box (if equipped)

You can place a first aid kit, a reflector triangle, tools, etc. in the box for easy access.
INTERIOR FEATURES
Cup holder

**WARNING - Hot liquids**
Do not place uncovered cups with hot liquid in the cup holder while the vehicle is in motion. If the hot liquid spills, you burn yourself. Such a burn to the driver could lead to loss of control of the vehicle.

**CAUTION**
- *Keep your drinks sealed while driving to prevent spilling your drink. If liquid spills, it may get into the vehicle’s electrical/electronic system and damage electrical/electronic parts.*
- *When cleaning spilled liquids, do not dry the cup holder at high temperature. This may damage the cup holder.*

To use the cup holder, folding the center seat or pull down the armrest.

Cups or small beverage cans may be placed in the cup holders.
**Sunvisor**

Use the sunvisor to shield direct light through the front or side windows.
To use the sunvisor, pull it downward.
To use the sunvisor for the side window, pull it downward, unsnap it from the bracket (1) and swing it to the side (2).
Adjust the sunvisor extension forward or backward (3). (if equipped)
To use the vanity mirror, pull down the visor and slide the mirror cover (4).

To use the vanity mirror lamp, switch it on. (if equipped)

**Seat warmer (if equipped)**

The seat warmer is provided to warm the front seats during cold weather.
With the ignition switch in the ON position, push either of the switches to warm the driver's seat or the front passenger's seat.

---

**CAUTION - Vanity mirror lamp (if equipped)**

*If you use the vanity mirror lamp, turn off the lamp before returning the sunvisor to its original position. It could result in battery discharge and possible sunvisor damage.*
During mild weather or under conditions where the operation of the seat warmer is not needed, keep the switches in the “OFF” position.

- Each time you press the switch, the temperature setting of the seat will change as follows:
  - Type A
    - OFF
    - HIGH
    - LOW
  - Type B
    - OFF
    - HIGH
    - MIDDLE
    - LOW
- The seat warmer defaults to the OFF position whenever the ignition switch is turned on.
- When pressing the switch for more than 1.5 seconds with the seat warmer operating, the seat warmer will turn OFF.

**NOTICE**
With the seat warmer switch in the ON position, the heating system in the seat turns off or on automatically depending on the seat temperature.

⚠️ CAUTION - Seat damage
- When cleaning the seats, do not use an organic solvent such as paint thinner, benzene, alcohol and gasoline. Doing so may damage the surface of the heater or seats.
- To prevent overheating the seat warmer, do not place anything on the seats that insulates against heat, such as blankets, cushions or seat covers while the seat warmer is in operation.
- Do not place heavy or sharp objects on seats equipped with seat warmers. Damage to the seat warming components could occur.

**NOTICE**
Be careful not to spill liquid such as water or beverages on the seat. If you spill some liquid, wipe the seat with a dry towel. Before using the seat warmer, dry the seat completely.
Features of your vehicle

**WARNING - Seat heater burns**

The seat warmer may cause burns, even at low temperatures, if used over a long period of time. Never allow passengers who may not be able to take care of themselves to be exposed to the risk of seat heater burns. These include:

1. Infants, children, elderly or disabled persons, or hospital outpatients
2. Persons with sensitive skin or those that burn easily
3. Fatigued individuals
4. Intoxicated individuals
5. Individuals taking medication that can cause drowsiness or sleepiness (sleeping pills, cold tablets, etc.)

---

**Seat air ventilation (if equipped)**

The temperature setting of the seat changes according to the switch position.

- If you want to cool your seat cushion, press the switch (blue color).
- Each time you press the button, the airflow will change as follows:
  
  ![Airflow Settings](image)

  - OFF
  - HIGH (\³\³\³)
  - MIDDLE (\³\³)
  - LOW (\³)

- When pressing the switch for more than 1.5 seconds with the seat air ventilation operating, the seat air ventilation will turn OFF.
- The seat air ventilation defaults to the OFF position whenever the ignition switch is turned on.
**CAUTION - Seat damage**

- When cleaning the seats, do not use an organic solvent such as paint thinner, benzene, alcohol and gasoline. Doing so may damage the air ventilation seat.
- Do not place heavy or sharp objects on the seat. Those things may damage the air ventilation seat.
- Be careful not to spill liquid such as water or beverages on the seat. If you spill some liquid, wipe the seat with a dry towel. Before using the air ventilation seat, dry the seat completely.

**NOTICE**

With the seat warmer switch in the ON position, the heating system in the seat turns off or on automatically depending on the seat temperature.

- When pressing the switch for more than 1.5 seconds with the seat warmer operating, the seat warmer will turn OFF.
- The seat warmer defaults to the OFF position whenever the engine start/stop button (the ignition switch) is turned on.

---

Rear seat warmer (if equipped)

The seat warmer is provided to warm the rear outboard seats during cold weather. With the ignition switch in the ON position, push either of the switches to warm rear seats.

During mild weather or under conditions where the operation of the seat warmer is not needed, keep the switches in the “OFF” position.

OFF → HIGH ( ) → LOW ( )
NOTICE
Be careful not to spill liquid such as water or beverages on the seat. If you spill some liquid, wipe the seat with a dry towel. Before using the seat warmer, dry the seat completely.

⚠️ CAUTION - Seat damage
- When cleaning the seats, do not use an organic solvent such as thinner, benzene, alcohol and gasoline. Doing so may damage the surface of the heater or seats.
- To prevent overheating the seat warmer, do not place anything on the seats that insulates against heat, such as blankets, cushions or seat covers while the seat warmer is in operation.
- Do not place heavy or sharp objects on seats equipped with seat warmers. Damage to the seat warming components could occur.

⚠️ WARNING - Seat heater burns
The seat warmer may cause burns, even at low temperatures, if used over a long period of time. Never allow passengers who may not be able to take care of themselves to be exposed to the risk of seat heater burns. These include:
1. Infants, children, elderly or disabled persons, or hospital outpatients
2. Persons with sensitive skin or those that burn easily
3. Fatigued individuals
4. Intoxicated individuals
5. Individuals taking medication that can cause drowsiness or sleepiness (sleeping pills, cold tablets, etc.)

Power outlet (if equipped)

The power outlet is designed to provide power for mobile telephones or other devices designed to operate with vehicle electrical systems. The devices should draw less than 10 amps with the engine running.
• Use the power outlet only when the engine is running and remove the accessory plug after use. Using the accessory plug for prolonged periods of time with the engine off could cause the battery to discharge.

• Only use 12V electric accessories which are less than 10A(Driver’s side) or 15A(Passenger’s side) in electric capacity.

• Adjust the air-conditioner or heater to the lowest operating level when using the power outlet.

• Close the cover when not in use.

• Some electronic devices can cause electronic interference when plugged into a vehicle's power outlet. These devices may cause excessive audio static and malfunctions in other electronic systems or devices used in your vehicle.

⚠️ WARNING - Electric shock
Do not put a finger or a foreign element (pin, etc.) into a power outlet and do not touch with a wet hand. You may get an electric shock.

Clothes hanger (if equipped)

To use the hanger, pull down the upper portion of hanger.
Be careful when opening and closing the doors. Clothes, etc. may get caught between the door gap.

⚠️ CAUTION - Hanging clothing
Do not hang heavy clothes, since those may damage the hook.
Features of your vehicle

**Floor mat anchor(s)**

- Driver's side
- Passenger's side

When using a floor mat on the floor carpet, make sure it attaches to the floor mat anchor(s) in your vehicle. This keeps the floor mat from sliding forward.

**WARNING**

The coat hook should only be used to hang clothing. Do not hang any other items on the hook as they may become injury producing objects in the event of a crash.

**WARNING - After market floor mat**

Do not install aftermarket floor mats that are not capable of being securely attached to the vehicle's floor mat anchors. Unsecured floor mats can interfere with pedal operation.

The following must be observed when installing ANY floormat to the vehicle.

- Ensure that the floormats are securely attached to the vehicle's floor mat anchor(s) before driving the vehicle.
- Do not use ANY floormat that cannot be firmly attached to the vehicle's floormat anchors.
- Do not stack floormats on top of one another (e.g. all-weather rubber mat on top of a carpeted floormat). Only a single floormat should be installed in each position.

**IMPORTANT** - Your vehicle was manufactured with driver's side floor mat anchors that are designed to securely hold the floormat in place. To avoid any interference with pedal operation, Kia recommends that only the Kia floormat designed for use in your vehicle be installed.
Features of your vehicle

Luggage net holder (if equipped)

To keep items from shifting in the cargo area, you can use the holders located in the cargo area to attach the luggage net.

If necessary, contact your authorized Kia dealer to obtain a luggage net.

© CAUTION

To prevent damage to the goods or vehicle, care should be taken when carrying fragile or bulky objects in the luggage compartment.

© WARNING - Luggage net

- Always keep your face and body out of the luggage net recoil path and avoid using the luggage net when the straps have visible signs of wear or damage. The luggage net can snap and cause injuries.
- All cargo should be evenly distributed, properly secured and never piled higher than the seatback.

Cargo area cover (if equipped)

Use the cargo area cover to hide items stored in the cargo area.
**Removal and installation**

**To remove the cargo area cover:**
1. Fold the cargo area cover up in half.
2. Firmly hold the folded part of the cover and lift it up.
3. While lifting the cover up, hold the area near the front slots. Then, pull up the cover at approximately 45° angle.

*NOTICE*
Folded cover may block the rear view. Put the folded cover in the appropriate position.
To install the cargo area cover:
To use the cargo area cover, insert the 4 edges into the slots.

⚠️ WARNING - Objects
- Do not place objects on the cargo area cover. Such objects may be thrown about inside the vehicle and possibly injure vehicle occupants during an accident or when braking.
- All cargo should be evenly distributed, properly secured and never piled higher than the seatback.

⚠️ CAUTION - Luggage
Since the cargo area cover may be damaged or malformed, do not put luggage on it when it is used.
EXTERIOR FEATURES

Roof rack (if equipped)

If the vehicle has a roof rack, you can load cargo on top of your vehicle. We recommend to obtain the crossbars and fixing components needed to install the roof rack on your vehicle from an authorized Kia dealer.

★ NOTICE

- The crossbars (if equipped) should be placed in the proper load carrying positions prior to placing items onto the roof rack.
- If the vehicle is equipped with a sunroof, be sure not to position cargo onto the roof rack in such a way that it could interfere with sunroof operation.
- When the roof rack is not being used to carry cargo, the crossbars may need to be repositioned if wind noise is detected.

⚠️ CAUTION - Loading Roof Rack

- When carrying cargo on the roof rack, take the necessary precautions to make sure the cargo does not damage the roof of the vehicle.
- When carrying large objects on the roof rack, make sure they do not exceed the overall roof length or width.
- When you are carrying cargo on the roof rack, do not operate the sunroof (if equipped). This can damage the sunroof.

⚠️ WARNING - Driving with roof load

Always drive slow and turn corners carefully when carrying items on the roof rack. The vehicle’s center of gravity will be higher when items are loaded onto the roof rack.
• The following specification is the maximum weight that can be loaded onto the roof rack. Distribute the load as evenly as possible across the crossbars (if equipped) and roof rack and secure the load firmly.

| ROOF RACK | 80 kg (176 lbs.) EVENLY DISTRIBUTED |

Loading cargo or luggage in excess of the specified weight limit on the roof rack may damage your vehicle.

• The vehicle center of gravity will be higher when items are loaded onto the roof rack. Avoid sudden starts, braking, sharp turns, abrupt maneuvers or high speeds that may result in loss of vehicle control or rollover resulting in an accident.

• Always drive slowly and turn corners carefully when carrying items on the roof rack. Severe wind updrafts, caused by passing vehicles or natural causes, can cause sudden upward pressure on items loaded on the roof rack. This is especially true when carrying large, flat items such as wood panels or mattresses. This could cause the items to fall off the roof rack and cause damage to your vehicle or others around you.

• To prevent damage or loss of cargo while driving, check frequently before or while driving to make sure the items on the roof rack are securely fastened.

**Mounting bracket for roof carrier (if equipped)**

To install or remove a roof carrier, you can use the mounting bracket and cover on the roof.

When you install a roof carrier, do the following procedure.

1. Insert a slim tool (coin or flat blade driver) into the slot and slide the cover toward the arrow on the cover.
2. Rotate the cover half way and insert the cover on the roof hole as the illustration.

**NOTICE**
If the vehicle is equipped with a sunroof, be sure not to position cargo onto the roof in such a way that it could interfere with sunroof operation.

**NOTICE**
To prevent losing the roof carrier cover, install the cover on the roof before you install the roof carrier.

3. After using the roof carrier, install the cover back on the roof in the reverse order.

**CAUTION - Loading roof rack**
When carrying cargo on the roof rack, take the necessary precautions to make sure the cargo does not damage the roof of the vehicle.

- When carrying large objects on the roof rack, make sure they do not exceed the overall roof length or width.
- The vehicle center of gravity will be higher when items are loaded onto the roof. Avoid sudden starts, braking, sharp turns, abrupt maneuvers or high speeds that may result in loss of vehicle control or rollover resulting in an accident.
- To prevent damage or loss of cargo while driving, check frequently before or while driving to make sure the items on the roof are securely fastened.

**WARNING - Driving with roof load**
Always drive slow and turn corners carefully when carrying items on the roof rack. The vehicle center of gravity will be higher when items are loaded onto the roof rack.

Audio system

AUDIO SYSTEM
If you install aftermarket HID head lamps, your vehicle's audio and electronic devices may malfunction.

Antenna (if equipped)

Your vehicle uses a roof antenna to receive AM or/and FM broadcast signals.

This antenna pole is removable. To remove the roof antenna pole, turn it counterclockwise. To install the roof antenna pole, turn it clockwise.

⚠️ CAUTION - Antenna

Before entering a place with a low height clearance or a car wash, remove the antenna pole by rotating it counterclockwise. If not, the antenna may be damaged.

- When reinstalling your roof antenna, it is important that it is fully tightened and adjusted to the upright position to ensure proper reception.
- When cargo is loaded on the roof rack, do not place the cargo near the antenna pole to ensure proper reception.
Audio remote control (if equipped)

The steering wheel audio remote control button may be installed. Do not operate the audio remote control buttons simultaneously.

---

⚠️ WARNING - Distracted Driving
Driving while distracted can result in a loss of vehicle control that may lead to an accident, severe personal injury and death. The driver’s primary responsibility is in the safe and legal operation of a vehicle, and use of any handheld devices, other equipment or vehicle systems which take the driver’s eyes, attention and focus away from the safe operation of a vehicle or that are not permissible by law should never be used during operation of the vehicle.

VOLUME (VOL+/ VOL-) (1)
• Push the VOL + to increase volume.
• Push the VOL - to decrease volume.

SEEK/PRESET ( / ) (2)
If the SEEK/PRESET button is pressed for more than 1 second, it will work as follows in each mode.

RADIO mode
It will function as the AUTO SEEK select button.

USB mode
It will function as the FF/REW button.

If the SEEK/PRESET button is pressed for less than 1 second, it will work as follows in each mode.
Audio system

RADIO mode
It will function as the PRESET STATION select buttons.

USB mode
It will function as the FILE UP/DOWN button.

MODE (3)
Press the button to select Radio, USB or AUX.

Detailed information for audio control buttons is described in the following pages in this section.

AUX and USB port (if equipped)
If your vehicle has an AUX and/or USB (universal serial bus) port, you can use an AUX port to connect audio devices and an USB port to plug in a USB.
When using a portable audio device connected to the power outlet, noise may occur during playback. If this happens, use the power source of the portable audio device.

Speaker lights (if equipped)
The speaker lights that light around the front speaker are adjusted by turning the knob as follows.
1. OFF: The light turns off.
2. MUSIC:
   The red light blinks according to the sound of the audio.
   If the audio is not turned on, the light does not turn on.
3. MOOD:
   The light color changes automatically at regular interval.
4. +/-:
   When the lights are on, push the illumination button to adjust the light intensity.
   If low lighting grade is selected, the intensity of light may be weak or may not illuminate according to the audio volume or selected condition.

The lighting around the front speaker may not illuminate when the sound of the audio is low.

Do not use the lights for extended periods when the engine is not running.
It may cause battery discharge.

* NOTICE
When the doors are opened, the lighting system will not operate.
How vehicle audio works

AM and FM radio signals are broadcast from transmitter towers located around your city. They are intercepted by the radio antenna on your vehicle. This signal is then processed by the radio and sent to your vehicle speakers.

However, in some cases the signal coming to your vehicle may not be strong and clear.

This can be due to factors such as the distance from the radio station, closeness of other strong radio stations or the presence of buildings, bridges or other large obstructions in the area.

AM reception

AM broadcasts can be received at greater distances than FM broadcasts. This is because AM radio waves are transmitted at low frequencies. These long distance, low frequency radio waves can follow the curvature of the earth rather than travelling straight. In addition, they curve around obstructions resulting in better signal coverage.
FM broadcasts are transmitted at high frequencies and do not bend to follow the earth's surface. Because of this, FM broadcasts generally begin to fade within short distances from the station. Also, FM signals are easily affected by buildings, mountains, and obstructions. This can lead to undesirable or unpleasant listening conditions which might lead you to believe a problem exists with your radio. The following conditions are normal and do not indicate radio trouble:

- **Fading** - As your vehicle moves away from the radio station, the signal will weaken and sound will begin to fade. When this occurs, we suggest that you select another stronger station.
- **Flutter/Static** - Weak FM signals or large obstructions between the transmitter and your radio can disturb the signal causing static or fluttering noises to occur. Reducing the treble level may lessen this effect until the disturbance clears.
- **Station Swapping** - As an FM signal weakens, another more powerful signal near the same frequency may begin to play. This is because your radio is designed to lock onto the clearest signal. If this occurs, select another station with a stronger signal.
- **Multi-Path Cancellation** - Radio signals being received from several directions can cause distortion or fluttering. This can be caused by a direct and reflected signal from the same station, or by signals from two stations with close frequencies. If this occurs, select another station until the condition has passed.
Using a cellular phone or a two-way radio

When a cellular phone is used inside the vehicle, noise may be produced from the audio system. This does not mean that something is wrong with the audio equipment. In such a case, try to operate mobile devices as far from the audio equipment as possible.

When using a communication system such as a cellular phone or a radio set inside the vehicle, a separate external antenna must be fitted. When a cellular phone or a radio set is used with an internal antenna alone, it may interfere with the vehicle's electrical system and adversely affect safe operation of the vehicle.

**WARNING - Cell phone use**
Do not use a cellular phone while driving. Stop at a safe location to use a cellular phone.

**WARNING - Driver Distraction**
- Do not stare at the screen while driving. Staring at the screen for prolonged periods of time could lead to traffic accidents.
- Using the phone while driving may lead to a lack of attention of traffic conditions and increase the likelihood of accidents. Use the phone feature after parking the vehicle.

**WARNING - Audio System**
- Do not disassemble, assemble, or modify the audio system. Such acts could result in fire or electric shock.
- Exercise caution not to spill water or introduce foreign objects into the device. Such acts could lead to smoke, fire, or product malfunction.

**WARNING - Antenna**
Do not touch the antenna during thunder or lightning as such acts may lead to lightning induced electric shock.

**CAUTION**
Refrain from use if the screen is blank or no sound can be heard as these signs may indicate product malfunction. Continued use in this condition may further damage the system.
**iPod®**

iPod® is a registered trademark of Apple Inc.

---

**Bluetooth® Wireless Technology**

A compatible Bluetooth® Wireless Technology-enabled cell phone is required to use Bluetooth® Wireless Technology.

The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Kia is under license.

Other trademarks and trade names are those of their respective owners.

A Bluetooth® enabled cell phone is required to use Bluetooth® Wireless Technology.

Bluetooth® Wireless Technology phone compatibility can be checked by visiting http://www.kia.com.

Audio system

AUDIO (With Touch Screen)

(With Bluetooth® Wireless Technology)
Feature of Your Audio

Head unit

(1) RADIO
- Start FM, AM and SiriusXM Radio.

(2) MEDIA
- Select USB (iPod®), Bluetooth® Wireless Technology (BT) Audio, AUX, My Music or Pandora.
- Display the media menu when two or more media are connected or when the [MEDIA] button is pressed in media mode.

(3) PHONE
- Start Bluetooth® Wireless Technology Phone mode.

(4) POWER/VOL knob
- Turn to adjust the volume.
- Press to turn the device on or off.

(5) SEEK/TRACK
- Search for frequencies in radio mode.
- Search for next station in SiriusXM radio mode.
- Change the current song in media mode.

※ The actual image in the vehicle may differ from the illustration.
(6) **DISP**
- Turn the display on or off.

(7) **CLOCK**
- Display the time/date/day.

(8) **SETUP**
- Access Display, Sound, Date/Time, Bluetooth, System, Screen Saver and Display Off settings.

(9) **TUNE** knob
- Turn to navigate through the stations/songs list.
- Press to select an item.

(10) **RESET**
- Shutdown and restart the system.
**Steering wheel remote control**

* The actual image in the vehicle may differ from the illustration.

(1) **MODE**
- Press the button to change the mode in the following order: Radio ➞ Media.
- Press and hold the button to turn off.

(2) **VOLUME**
- Press to adjust the volume.

(3) **UP/DOWN**
- Press the button in radio mode to search Presets.
- Press and hold the button in radio mode to search frequencies.
- Press the button in media mode to change the current song. (except AUX)
- Press and hold the button in media mode to quick search through songs. (except Bluetooth® Wireless Technology (BT) Audio and AUX)

(4) **VOICE**
- Pressing the button
  - If voice recognition is not active: Start voice recognition.
  - During the notification message after voice recognition is started: The notification message is skipped, and voice command standby mode is activated.
- Pressing and holding the button:
  - If voice recognition is active: End voice recognition.
  - If voice recognition is not active: Starts/Ends Siri.

(5) **CALL**
- Pressing the button
  - If not in Bluetooth® Wireless Technology Handsfree mode or receiving a phone call:
    First press: Display Dial Number screen.
    Second press: Automatically display the most recently Dialed call number.
    Third press: Dial the phone number entered.
  - Press in the Incoming Call notification screen to accept the phone call.
  - Press in Bluetooth® Wireless Technology Handsfree mode to switch to the waiting call.
- Pressing and holding the button (over 1.0 seconds)
  - If not in Bluetooth® Wireless Technology Handsfree mode or receiving a phone call, the most recently Dialed Call number is dialed.
- Press in Bluetooth® Wireless Technology Handsfree mode to transfer the call to your cell phone.
- Press in cell phone mode to switch to Bluetooth® Wireless Technology Handsfree mode.

(6) END
- Press in Bluetooth® Wireless Technology Handsfree mode to end the phone call.
- Press in the incoming call screen to reject the call.

⚠️ WARNING - Distracted Driving
Driving while distracted can result in a loss of vehicle control that may lead to an accident, severe personal injury, and death. The driver’s primary responsibility is in the safe and legal operation of a vehicle, and use of any handheld devices, other equipment, or vehicle systems which take the driver’s eyes, attention and focus away from the safe operation of a vehicle or which are not permissible by law should never be used during operation of the vehicle.

⚠️ WARNING - Driver Distraction
- Do not stare at the screen while driving. Staring at the screen for prolonged periods of time could lead to traffic accidents.
- Using the phone while driving may lead to a lack of attention of traffic conditions and increase the likelihood of accidents. Use the phone feature after parking the vehicle.

⚠️ WARNING - Audio System
- Do not disassemble, assemble, or modify the audio system. Such acts could result accidents, fire or electric shock.
- Exercise caution not to spill water or introduce foreign objects into the device. Such acts could lead to smoke, fire, or product malfunction.

⚠️ WARNING
Do not use a cellular phone while driving. Stop at a safe location to use a cellular phone.
**WARNING - Antenna**
Do not touch the antenna during thunder or lightning because such an act may cause electric shock.

**CAUTION**
- Adjust the volume to levels that allow the driver to hear sounds from outside of the vehicle. Driving in a state where external sounds cannot be heard may lead to accidents.
- Pay attention to the volume setting when turning the device on. A sudden output of extreme volume upon turning the device on could lead to hearing impairment. (Adjust the volume to a suitable levels before turning off the device.)
- Turn on the car engine before using this device. Do not operate the audio system for long periods of time only with the ignition turned on as such operations may lead to battery discharge.
- In case of product malfunction, please contact your place of purchase or After Service center.
- Placing the audio system within an electromagnetic environment may result in noise interference.

**CAUTION - LCD Monitor**
Do not subject the device to severe shock or impact. Direct pressure onto the front side of the monitor may cause damage to the LCD or touch screen.

**CAUTION**
- When cleaning the device, make sure to turn off the audio system and use a dry and smooth cloth.
- Do not place beverages close to the audio system. Spilling beverages may lead to system malfunction.
- Never use rough materials, chemical cloths, or solvents (alcohol, benzene, thinners, etc.) as such materials may damage the device panel or cause color/quality deterioration.
- Prevent caustic solutions such as perfume and cosmetic oil from contacting the dashboard because they may cause damage or discoloration.

**NOTICE**
Refrain from use if the screen is blank or no sound can be heard as these signs may indicate product malfunction. Continued use in this condition may further damage the system.

Radio

You can listen to FM, AM and SiriusXM radio.

(1) Band
Switch between FM, AM and SiriusXM radio.

(2) Presets
Change the preset number on the main screen.

(3) List
Display all available stations.

(4) Menu
Navigate to the menu screen.

(5) Presets 1~40
Save or listen to favorite stations.

Switching between FM, AM and SiriusXM radio
- Press the [RADIO] button on the audio system to switch between FM, AM and SiriusXM radio.
- Press the [Band] on the screen to switch between FM, AM and SiriusXM radio.

Searching stations
Searching stations by pressing the [SEEK/TRACK] button on the product.

< Presets >
By selecting [< Presets >], the buttons for Presets 1~40 displayed on the screen can be changed.

Presets 1~40
Select the button to listen to a preset. Press and hold the button number to save the current station. If the slot is empty, simply selecting saves the station to the slot.

List
A list of all available stations is displayed. Select the desired station. Favorite stations can be saved to [Presets] by selecting the [+].

Menu
Select the [Menu], and select the desired function.
- Presets: Save up to 40 frequently used stations. To listen to a preset, select the desired station. Press and hold the desired slot from 1 through 40. This saves the current station in the selected slot. If the slot is empty, simply selecting saves the station to the slot.
- Scan: All stations available in the current location of the vehicle are played for five seconds each.
- Information: View detailed station information.
- Sound Settings: Audio sound settings can be changed.
- Station Info: Set whether to receive station information such as Station Name, Program Type or Information.
NOTICE
- SiriusXM® Satellite Radio information

• Satellite Radio channels:
Enjoy SiriusXM Satellite Radio with a 3-month trial subscription to the Sirius Select package. You’ll get over variable channels, including commercial-free music, plus all your favorite sports, exclusive talk, entertainment, and a selection of premium programming. For more information and a complete list of SiriusXM channels, visit siriusxm.com in the United States, siriusxm.ca in Canada, or call SiriusXM at 1-888-539-7474.

• Satellite Radio reception factors:
To receive the satellite signal, your vehicle has been equipped with a satellite radio antenna located on the roof of your vehicle. The vehicle roof provides the best location for an unobstructed, open view of the sky, a requirement of a satellite radio system. Like AM/FM, there are several factors that can affect satellite radio reception performance:

(Continued)
- Antenna obstructions: For optimal reception performance, keep the antenna clear of snow and ice build-up and keep luggage and other material as far away from the antenna as possible.

• SiriusXM Satellite Radio service:
SiriusXM is a subscription-based satellite radio service that broadcasts music, sports, news and entertainment programming to radio receivers, which are available for installation in motor vehicles or factory installed, as well as for the home, portable and wireless devices, and through an Internet connection on a personal computer. Vehicles that are equipped with a factory installed SiriusXM Satellite Radio system include:
- Hardware and an introductory trial subscription term, which begins on the date of sale or lease of the vehicle.
- For a small upgrade fee, access to SiriusXM music channels, and other select channels over the Internet using any computer connected to the Internet (U.S. customers only).

(Continued)
- SiriusXM services require a subscription sold separately, or as a package, by Sirius XM Radio Inc. If you decide to continue service after your trial, the subscription plan you choose will automatically renew thereafter and you will be charged according to your chosen payment method at then-current rates. Fees and taxes apply. To cancel you must call SiriusXM at 1-866-635-2349. See SiriusXM Customer Agreement for complete terms at www.siriusxm.com. SiriusXM U.S. satellite and data services are available only in the 48 contiguous states, DC and Puerto Rico (with coverage limitations). SiriusXM satellite service is also available in Canada; see www.siriusxm.ca. All fees and programming subject to change. Sirius, XM and all related marks and logos are trademarks of Sirius XM Radio Inc.
SiriusXM Radio

(1) Band
Switch between FM, AM and SiriusXM radio.

(2) Presets
Change the preset number on the main screen.

(3) List
Display all channels.

(4) Menu
Navigate to the menu screen.

(5) Presets 1~40
Save or listen to favorite channels.

(6) Play Live
Switches to the live broadcast mode.

(7) Skip Backward
Repeats the previously broadcasted program.
- Pressing the button: Moves to the previous segment.
- Pressing and holding the button (over 1.0 seconds): Moves to the previous 5 seconds.

(8) Play/Pause
Pauses/plays the current broadcasting program.

(9) Skip Forward
Moves to the next segment.

Switching between FM, AM and SiriusXM radio
- Press the [RADIO] button on the audio system to switch between FM, AM and SiriusXM radio.
- Select the [Band] on the screen to switch between FM, AM and SiriusXM radio.

Searching channels
Press the [SEEK/TRACK] button to search channels.

< Presets >
By selecting [< Presets >], the buttons for Presets 1~40 displayed on the screen can be changed.

Presets 1~40
Select the button to listen to a preset. Press and hold the button number to save the current channel.
Audio system

**List**
A list of all channels is displayed. Select the desired channel. Favorite channels can be saved to [Presets] by selecting the [+].

**Menu**
Select the [Menu], and select the desired function.
- **Presets**: Save up to 40 frequently used channels.
  To listen to a preset, select the desired channel.
  Press and hold the desired slot from 1 through 40. This saves the current channel in the selected slot.
  If the slot is empty, simply selecting saves the channel to the slot.
- **Categories**: Channels can be searched by category.
- **Direct Tune**: The desired channel can be selected by entering numbers.
- **Sound Settings**: Audio sound settings can be changed.
- **Tag Song**: Tag the current song information.
  When an Apple device (iPhone®, iPod®) is connected, tagged song information is sent automatically to the connected device.
- **Information**: View detailed channel information.
- **Category Lock**: Search or scan channels in the current category only.

*NOTICE*
Up to 50 songs can be tagged.

- **Scan**: All channels available in the vehicle's current location are played for ten seconds each.
- **Program Schedule**: View the program schedule.
- **Featured Favorites**: The Featured Favorites feature allows SiriusXM™ to broadcast additional presets.
  - Example 1: During holidays, "Holiday Music" might include all SiriusXM™ channels that are playing holiday music for easy access by users.
  Multiple sets of Featured Favorites data can be broadcast by SiriusXM™ and can change from time to time.

   • English: 94 characters
   • Common Chinese characters: 4,888 characters
   • Special symbols: 986 characters

* NOTICE
Japanese/Simplified Chinese characters are not supported.

* NOTICE
- Using the USB Devices
   • Starting the vehicle while a USB device is connected can damage the device. Please disconnect USB devices before starting the vehicle.
   • Starting the vehicle or stopping the engine while an external USB device is connected can result in failure of the external USB device to operate.
   • Be cautious of static electricity when connecting/disconnecting external USB devices.
   • An encrypted MP3 player is not recognized when connected as an external device.
   • External USB devices may not be recognized, depending on the state of the external USB device.
   • Only products with byte/sectors formatted at 4 KB or lower are recognized.
   • Only USB devices in FAT12/16/32 format are recognized; NTFS and ExFAT file systems are not recognized.
   • Some USB devices are not recognized due to compatibility issues.

(Continued)
• Do not touch the USB connections.
• Connecting and disconnecting USB devices rapidly over a short period of time can cause equipment failure.
• Abnormal sounds may be audible when the USB device is disconnected.
• Turn the audio off before connecting or disconnecting external USB devices.
• Recognition may take longer depending on the type, capacity or file format of the external USB device. This is not a product malfunction.
• Use of USB devices for purposes other than playing music files is prohibited.
• Image display and video playback are not supported.
• Use of USB accessories, including charge and heat through the USB interface, can lead to reduced product performance or malfunctions. Do not use USB devices or accessories for these purposes.

(Continued)
(Continued)
- Use of aftermarket USB hubs and extension cables can result in the vehicle's audio system failing to recognize your USB device. Connect the USB device directly to the multimedia port of your vehicle.
- When using high-capacity USB devices with logical drive divisions, only files saved on the highest level logical drive can be played. If applications are loaded on a USB drive, file playback may fail.
- Some MP3 players, cell phones, digital cameras, etc. (USB devices that are not recognized as mobile storage) may not operate normally when connected.
- USB charging may not be supported by some mobile devices.
- Operation is guaranteed only for standard (Metal Cover Type) USB Memory drives.
- Operation of HDD, CF, SD and memory stick devices is not guaranteed.

(Continued)
- DRM (Digital Rights Management) files cannot be played.
- SD-type USB memory, CF-type USB memory, and other USB memory devices that require adapters for connection are not supported.
- Proper operation of USB HDDs or USB drives with connectors that loosen due to vehicle vibrations is not guaranteed. (iStick, etc.)
- USB products that are used as key chains or cell phone accessories may damage the USB jack and affect proper file playback. Please refrain from use. Use only products with plug connectors, as shown in the following illustration.
- When MP3 devices or cell phones are connected simultaneously through AUX, BT Audio and USB modes, a popping noise or malfunction may occur.

USB

(1) Repeat
Enable/disable repeat play.

(2) Shuffle
Enable/disable shuffle play.

(3) List
View a list of all songs.

(4) Menu
Navigate to the menu screen.

(5) Album Image
View song info.
(6) Pause
Pause or play music.

(7) Playback progress
Press to skip to the desired location.

Playback
Press the [MEDIA] button, and select [USB].
- Connect a USB drive to the USB port to automatically play files on the USB drive.

Changing songs
Press the [SEEK/TRACK] button to play the previous or next song.
- Press and hold the [SEEK/TRACK] button to rewind or fast forward the currently playing song.
- Search songs by turning TUNE knob, and press the knob to play.

Selecting songs from a list
Select the [List] to see a list of songs available for play.

Select and play the desired song.

Repeat play
Select the [Repeat] to enable or disable 'Repeat all', 'Repeat current song', 'Repeat folder' or 'Repeat category' play.
- Repeat all: All songs in the playlist are repeated.
- Repeat current song: The currently playing song is repeated.
- Repeat folder: All songs in the current folder are repeated.
- Repeat category: Repeat all songs in the current category.

* NOTICE
The repeat folder function is available only when songs are playing from the [File] category under [List].

Shuffle play
Select the [Shuffle] to enable/disable 'Shuffle', 'Shuffle folder' or 'Shuffle category' play.
- Shuffle: Songs are played in random order.
- Shuffle folder: Songs within the current folder are played in random order.
- Shuffle category: Songs within the current category are played in random order.
Menu
Select the [Menu], and select the desired function.

- **Save to My Music**: Songs on your USB device can be saved to My Music.
  (1) File: Select a file to save.
  (2) Mark All: Select all files.
  (3) Unmark All: Deselect all files.
  (4) Save: Save the selected files.
  - Select the files you want to save, and select the [Save]. This saves the selected files to My Music.
  - Saving is canceled if voice recognition or Siri is activated.
  - Up to 6,000 files can be saved.
  - The currently playing file on the USB device cannot be changed while saving.

- **My Music cannot be used while saving**.
- **Up to 700 MB can be saved**.
- **Information**: Detailed information on the currently playing song is displayed.
- **Sound Settings**: Audio sound settings can be changed.

**NOTICE**
- **Using the iPod® Devices**
  - To use the audio system’s iPod® control function, use the dedicated cable provided with your iPod®.
  - Connecting the iPod® to the vehicle during play may result in a loud noise that lasts about one to two seconds. Connect the iPod® to the vehicle after stopping or pausing play.
  - Connect the iPod® with the vehicle in the ACC ON state to begin charging.
  - When connecting the iPod® cable, be sure to fully push the cable into the port.
  - When Equalizer effects are enabled simultaneously on external devices, such as iPod®s and the audio system, the Equalizer effects may overlap, causing sound quality deterioration or distortion. Deactivate the Equalizer function for all external devices, if possible.
  - Noise may occur when your iPod® or the AUX port is connected. Disconnect and store separately when not in use.

(Continued)
(Continued)

- There may be noise if the audio system is used with an iPod® or AUX external device connected to the power jack. In these cases, disconnect the iPod® or external device from the power jack.
- Play may be interrupted, or device malfunctions may occur depending on the characteristics of your iPod®/iPhone®/iPad®.
- Play may fail if your iPhone® is connected through both Bluetooth® Wireless Technology and USB. In this case, select Dock connector or Bluetooth® Wireless Technology on your iPhone® to change the sound output settings.
- If your software version does not support the communication protocol or your iPod® is not recognized due to device failure, anomalies or defects, iPod® mode cannot be used.
- iPod® nano (5th generation) devices may not be recognized if the battery is low. Charge sufficiently before use.

(Continued)

- The search and song play order in the iPod® device may be different from the search order in the audio system.
- If the iPod® has failed due to an internal defect, please reset the iPod® (consult your iPod® manual).
- Depending on the software version, the iPod® may fail to sync with the system. If the media is removed or disconnected before recognition, the previous mode may not be restored (iPad® cannot be charged).
- Cables other than the 1-meter cable provided with iPod®/iPhone®/iPad® products may not be recognized.
- When other music apps are used on your iPod®, the system sync function may fail due to malfunction of the iPod® application.

iPod®

(1) Repeat
Enable/disable repeat play.

(2) Shuffle
Enable/disable shuffle play.

(3) List
View a list of all songs.

(4) Menu
Navigate to the menu screen.

(5) Album Image
View song info.
(6) Pause
Pause or play music.

(7) Playback progress
Press to skip to the desired location.

Playback
Connect your iPod® to the audio USB port, press the [MEDIA] button, and select [iPod].

✽ NOTICE
• When you connect an Apple device, playback does not start automatically.
• In iPod® Mode, song (file) lists are not supported if music is played using the Music application after connecting the iPod®.

Changing songs
Press the [SEEK/TRACK] button to play the previous or next song.
• Press and hold the [SEEK/TRACK] button to rewind or fast forward the currently playing song.
• Search songs by turning the TUNE knob, and press the knob to play.

Selecting songs from a list
Select the [List] to see a list of songs available for play.
Select and play the desired song.

Repeat play
Select the [Repeat] to enable or disable ‘Repeat category’, ‘Repeat current song’ play.
• Repeat category: Repeat all songs in the current category.
• Repeat current song: The currently playing song is repeated.

Shuffle play
Select the [Shuffle] to enable/disable ‘Shuffle category’ play.
• Shuffle category: Songs within the current category are played in random order.

Menu
Select the [Menu], and select the desired function.
• Information: Detailed info on the currently playing song is displayed.
• Sound Settings: Audio sound settings can be changed.

When other music programs are running

When songs saved on your iPod® are playing through a separate music app, the above screen is displayed.
(1) Play/Pause: Pause or play music.
(2) Play iPod Files: Play music saved on your iPod®.
(3) Album Image: View playback info.
Audio system

* NOTICE
Operation cannot be carried out correctly due to iPod® application malfunction.

Playing iPod files
Select [Play iPod Files] to play songs saved on your iPod®.
If there are no songs saved on your iPod®, the [Play iPod Files] is disabled.

* NOTICE
- Using Bluetooth® Wireless Technology Audio
  - Bluetooth® Wireless Technology Audio mode can only be used if a Bluetooth® Wireless Technology-enabled phone is connected. Only devices that support Bluetooth® Wireless Technology audio can be used.
  - If the Bluetooth® Wireless Technology-enabled phone is disconnected during play, the music stops.
  - When the TRACK UP/DOWN buttons are used during Bluetooth® Wireless Technology audio streaming, a popping noise or sound interruptions may occur, depending on the cell phone device.
  - Depending on the cell phone model, the audio streaming function may not be supported.

(Continued)
- If a phone call is made or received when music is playing in Bluetooth® Wireless Technology Audio mode, the call may mix with the music.
- When returning to Bluetooth® Wireless Technology Audio mode after ending a call, play might not resume automatically for some cell phone models.
Precautions for Safe Driving

- Bluetooth® Wireless Technology Handsfree is a feature that enables drivers to practice safe driving. Connecting the car audio system with a Bluetooth® Wireless Technology phone allows the user to conveniently make calls, receive calls, and manage the phone book. Before using the Bluetooth® Wireless Technology, carefully read the contents of this user’s manual.

- Excessive use or operations while driving may lead to negligent driving practices and be the cause of accidents.

- Do not operate the device excessively while driving.

- Viewing the screen for prolonged periods of time is dangerous and may lead to accidents.

- When driving, view the screen only for short periods of time.

* NOTICE

- Some cell phone models may not support particular functions.

- Bluetooth® Wireless Technology audio volume is synced with cell phone media volume.

Playback

Press the [MEDIA] button, and select [BT Audio].

Changing songs

Press the [SEEK/TRACK] button to play the previous or next song.

* NOTICE

Some cell phones may not support this function.
**Repeat play**
Select the [Repeat] to enable or disable ‘Repeat all’, ‘Repeat current song’ or ‘Repeat category’ play.
- _REPEAT all: All songs in the playlist are repeated.
- _REPEAT current song: The currently playing song is repeated.
- _REPEAT category: Repeat all songs in the current category.

**NOTICE**
The repeat play function is engaged, depending on the operation of the connected Bluetooth® Wireless Technology device.

**Shuffle play**
Select the [Shuffle] to enable/disable ‘Shuffle’, ‘Shuffle category’ play.
- _SHUFFLE: Songs are played in random order.
- _SHUFFLE category: Songs within the current category are played in random order.

**NOTICE**
The shuffle function is engaged, depending on the operation of the connected Bluetooth® Wireless Technology device.

**Menu**
Select the [Menu], and select the desired function.
-Connections: The currently connected Bluetooth® Wireless Technology device can be changed.
-Information: Detailed information on the currently playing song is displayed.
-Sound Settings: Audio sound settings can be changed.

**NOTICE**
- Depending on the connected Bluetooth device, mobile phone, or the music player you are using, playback controls may differ.
- Depending on the music player you are using, streaming may not be supported.

---

**AUX**

**Running AUX**
Press the [MEDIA] button, and select [AUX].

![AUX Cable Connected](image)

- Connect the external device connection jack to the AUX terminal to run AUX.

(1) Sound Settings: Audio sound settings can be changed.
Audio system

My Music

(1) Repeat
Enable/disable repeat play.

(2) Shuffle
Enable/disable shuffle play.

(3) List
View a list of all songs.

(4) Menu
Navigate to the menu screen.

(5) Album Image
View song info.

(6) Pause
Pause or play music.

(7) Playback progress
Press to skip to the desired location.

Playback
Press the [MEDIA] button, and select [My Music].
- My Music cannot be selected if it does not contain music.
- Check the content of your USB drive before saving music to My Music.

Changing songs
Press the [SEEK/TRACK] button to play the previous or next song.
- Press and hold the [SEEK/TRACK] button to rewind or fast forward the currently playing song.
- Search songs by turning the TUNE knob and press the knob to play.

Selecting songs from a list
Select the [List] to see a list of songs available for play.

Select and play the desired song.

Repeat play
Select the [Repeat] to enable or disable ‘Repeat all’, ‘Repeat current song’ or ‘Repeat category’ play.
- Repeat all: All songs in the playlist are repeated.
- Repeat current song: The currently playing song is repeated.
- Repeat category: Repeat all songs in the current category.
Shuffle play
Select the [Shuffle] to enable/disable ‘Shuffle’, ‘Shuffle category’ play.
- Shuffle: Songs are played in random order.
- Shuffle category: Songs within the current category are played in random order.

Menu
Select the [Menu], and select the desired function.

- Delete Files: You can delete files from My Music.
  (1) File: Select saved file.
  (2) Mark All: Select all Files.
  (3) Unmark All: Deselect all files.
  (4) Delete: Delete the selected file(s).
    - Select the file to delete, then select the [Delete] to delete it.
    - If voice recognition or Siri is activated, phone calls are received or made during delete, delete will be canceled.
- Add to Playlist: Frequently played songs can be paired in a [Playlist].
  - Songs can be played from the [Playlist].
- Information: Detailed info on the currently playing song is displayed.
- Sound Settings: Audio sound settings can be changed.

Delete from Playlist
When a song in the playlist is playing, select the [Menu] and select [Delete from Playlist].
Select the song to delete, then select [Delete].

Pandora

(1) Thumbs Down
If you don’t like the song that is currently playing, press this button to skip to the next song and to minimize the number of songs from similar genres.

* NOTICE
Pandora® limits the number of times that you can skip to the next song.
(2) Thumbs Up
If you like the song that is currently playing, press this button. Pandora® will play more songs from the same genre.

• Quit: Exit Pandora® mode and return to previous audio mode.
• Information: Detailed info on the currently playing song is displayed.
• Sound Settings: Audio sound settings can be changed.
**NOTICE**
- Using Bluetooth® Wireless Technology (BT) Cellular Phone

- Bluetooth® Wireless Technology is a near-field wireless networking technology that uses the 2.4 GHz frequency to connect various devices within a certain distance wirelessly.
- The technology is used in PCs, peripherals, Bluetooth® Wireless Technology phones, tablet PCs, household appliances and automobiles. Devices supporting Bluetooth® Wireless Technology can exchange data at high speeds without physical cable connections.
- Bluetooth® Wireless Technology Handsfree devices enable convenient access to phone functions through cell phones equipped with Bluetooth® Wireless Technology.
- Some Bluetooth® Wireless Technology devices may not be supported by the Bluetooth® Wireless Technology Handsfree function.

(Continued)
- When Bluetooth® Wireless Technology is connected and calls are attempted through a connected cell phone from outside the vehicle, the call is connected through the Bluetooth® Wireless Technology Handsfree function of the vehicle.
- Please be sure to disconnect the Bluetooth® Wireless Technology Handsfree function through your Bluetooth® Wireless Technology device or the audio screen.
- See http://www.kia.com for a list of supported Bluetooth® devices.

**Safety precautions**
- The Bluetooth® Wireless Technology Handsfree function helps drivers to drive safely. By connecting a Bluetooth® Wireless Technology-enabled phone to the vehicle's audio system, phone calls can be made and received through the audio system and contacts can be managed. Consult the user manual before use.

(Continued)
- Excessive manipulation of controls while driving, making it difficult to pay attention to the road ahead, can lead to accidents. Do not operate the device excessively while driving.
- Looking at the screen for a prolonged time increases the risk of accidents. Keep time spent looking at the screen to a minimum.

**Precautions when connecting Bluetooth® Wireless Technology devices**
- The vehicle supports the following Bluetooth® Wireless Technology functions. Some Bluetooth® Wireless Technology devices may not support some functions.
  1) Bluetooth® Wireless Technology Handsfree phone calls
  2) Operations during a call (Private, Switch, Out Vol. controls)
  3) Download call history saved to the Bluetooth® Wireless Technology device
  4) Download contacts saved to the Bluetooth® Wireless Technology device
5) Automatic contacts/call history download when Bluetooth® Wireless Technology is connected

6) Automatic Bluetooth® Wireless Technology device connection when the vehicle is started

7) Bluetooth® Wireless Technology audio streaming playback

• Before connecting the audio system to your device, make sure your device supports Bluetooth® Wireless Technology.

• Even if your device supports Bluetooth® Wireless Technology, a Bluetooth® Wireless Technology connection cannot be established if the device’s Bluetooth® Wireless Technology function is switched off. Search and connect with the Bluetooth® Wireless Technology function enabled.

• Pairing Bluetooth® Wireless Technology devices and use of other Bluetooth® Wireless Technology features are not supported when the vehicle is in motion. For safety, please first park your vehicle.

• If a Bluetooth® Wireless Technology connection is lost due to abnormal conditions while a Bluetooth® Wireless Technology device is connected (communication range exceeded, device power OFF, communication errors, etc.), the disconnected Bluetooth® Wireless Technology device is searched for and automatically reconnected.

• If you want to disable the Bluetooth® Wireless Technology device auto-connect function, turn the Bluetooth® Wireless Technology function OFF on your device. Consult the user manuals for individual devices to see whether Bluetooth® Wireless Technology is supported.

• Handsfree call quality and volume may vary depending on the type of Bluetooth® Wireless Technology device.

• Some Bluetooth® Wireless Technology devices are subject to intermittent Bluetooth® Wireless Technology connection failures. In this case, use the following method.

1) Turn the Bluetooth® Wireless Technology function off on your Bluetooth® Wireless Technology device → Turn it on and try again.

2) Delete the paired device from both the audio system and Bluetooth® Wireless Technology device, then pair again.

3) Power down your Bluetooth® Wireless Technology device → Turn it on and try again.

4) Completely remove the battery from your Bluetooth® Wireless Technology device; reinset it, reboot, and attempt connection.

5) Restart the vehicle and reatempt connection.

✽✽ NOTICE

- Bluetooth® Wireless Technology specifications
  - Power Class 2: -6 to 4 dBm
  - Aerial power: Max 3 mW
  - Frequency range: 2400 to 2483.5 MHz.
Paired a Bluetooth® Wireless Technology device

Information on pairing Bluetooth® Wireless Technology devices

- Pairing refers to the process of pairing Bluetooth® Wireless Technology cell phones or devices with the system prior to connection. This is a necessary procedure for Bluetooth® Wireless Technology connection and usage.
- Up to five devices can be paired.
- Pairing Bluetooth® Wireless Technology device is not allowed while vehicle is moving.

Paired the first Bluetooth® Wireless Technology device

Press the [PHONE] button on the audio system or the [CALL] button on the steering wheel remote control → Search for the vehicle from the Bluetooth® Wireless Technology device, and pair → Enter the passkey on the Bluetooth® Wireless Technology device or approve passkey → Bluetooth® Wireless Technology pairing completed.

1. When the [PHONE] button on the audio system or the [CALL] button on the steering wheel remote control is pressed, the following screen is displayed. Devices can now be paired.

2. Search for available Bluetooth® Wireless Technology devices in the Bluetooth® Wireless Technology menu of your Bluetooth® Wireless Technology device (cell phone, etc.).

3. Confirm that the vehicle name in your Bluetooth® Wireless Technology device matches the vehicle name shown on the audio screen, then select it.

4-1. For devices that require passkey entry, a passkey entry screen is shown on your Bluetooth® Wireless Technology device.
- Enter the passkey ‘0000’, in your Bluetooth® Wireless Technology device.

4-2. For devices that require passkey confirmation, the following screen is shown on the audio system. A 6-digit passkey input screen is shown in the Bluetooth® Wireless Technology device.

*NOTICE*

The vehicle name in the image above is an example. Refer to your device for the actual name of your device.

(1) Vehicle Name: Searched name in Bluetooth® Wireless Technology device.

- Enter the passkey '0000', in your Bluetooth® Wireless Technology device.
After confirming that the 6-digit passkey on the audio screen and the Bluetooth® Wireless Technology device are identical, select [OK] in your Bluetooth® Wireless Technology device.

**NOTICE**
The 6-digit passkey in the image above is an example. Refer to your vehicle for the actual passkey.

### Pairing a second Bluetooth® Wireless Technology device

Press the [SETUP] button on the audio system ➔ Select [Bluetooth] ➔ Select [Connections] ➔ Select [Add New].

- The pairing procedure from this point is identical to [Pairing the first Bluetooth device].

**NOTICE**

- Bluetooth® Wireless Technology standby mode lasts for three minutes. If a device is not paired within three minutes, pairing is canceled. Start over from the beginning.
- For most Bluetooth® Wireless Technology devices, a connection is established automatically after pairing. Some devices, however, require separate confirmation when connecting after pairing. Be sure to check your Bluetooth® Wireless Technology device after pairing to confirm that it has connected.
Connecting Bluetooth® Wireless Technology devices

If there are no connected devices
Press the [PHONE] button on the audio system or the [CALL] button in the steering wheel remote control ➞ List of paired Bluetooth® Wireless Technology devices ➞ Select the desired Bluetooth® Wireless Technology device from the list ➞ Connect Bluetooth® Wireless Technology.

If there are connected devices

✽ NOTICE
• Only one Bluetooth® Wireless Technology device can be connected at a time.
• When a Bluetooth® Wireless Technology device is connected, other devices cannot be paired.

Accepting/rejecting phone calls
Receiving phone calls with Bluetooth® Wireless Technology connected.

(1) Caller name: If the caller number is in your contacts, the corresponding name is displayed.
(2) Incoming phone number: Incoming phone number is displayed.
(3) Accept: Accept call.
(4) Reject: Reject call.
**NOTICE**
- When the incoming call screen is displayed, audio mode and the settings screen cannot be shown. Only call volume control is supported.
- Some Bluetooth® Wireless Technology devices may not support the call reject function.
- Some Bluetooth® Wireless Technology devices may not support the phone number display function.

**Operation during calls**
Incoming call with Bluetooth® Wireless Technology connected ➟ Select [Accept].

1. Display Call duration: Call duration display.
2. Caller name: If the caller number is in your contacts, the corresponding name is displayed.
3. Incoming phone number: Incoming phone number is displayed.
4. Keypad: Number keypad for Automatic Response Service input is displayed.
5. Private: Call is transferred to a cell phone.
7. End: End call.

**NOTICE**
- Some Bluetooth® Wireless Technology devices may not support the Private function.
- The outgoing voice volume may vary depending on the type of Bluetooth® Wireless Technology device. If the outgoing voice volume is too high or low, adjust the Microphone Outgoing Volume.
Audio system

**Favorites**
Press the [PHONE] button on the audio system ➔ Select [Favorites] ➔ Favorites list displayed.

1. **Favorites list**: A list of paired favorites is displayed. Connect a call when selected.
2. **Add to Favorites**: Add a downloaded phone number to favorites.
3. **Delete**: Delete a saved favorites.

**NOTICE**
- Up to 20 favorites can be saved for each connected Bluetooth® Wireless Technology device.
- Favorites can be accessed when the Bluetooth® Wireless Technology device they were paired from is connected.
- The audio system does not download favorites from Bluetooth® Wireless Technology devices. Favorites must be newly saved before use.
- To add to favorites, contacts must be downloaded first.
- Saved favorites are not updated even if the contacts of the connected Bluetooth® Wireless Technology device are changed. In this case, favorites need to be deleted and added again.

**Call history**
Press the [PHONE] button on the audio system ➔ Select [Call history] ➔ Call history is displayed.

1. **Call history**: Display the downloaded call history list. Connect a call when selected.
2. **Sort by**: Sort by All Calls, Dialed Calls, Received Calls or Missed Calls.
3. **Download**: Download call history from connected Bluetooth® Wireless Technology devices.
\* NOTICE

- Up to 50 dialed, received and missed calls are saved.
- When the latest call history is received, the existing call history is deleted.

**Contacts**

Press the [PHONE] button on the audio system ➞ Select [Contacts] ➞ Select letter (ABC) ➞ Contacts are displayed.

![Contacts screen](image)

(1) Contacts: Display downloaded contacts.
   - Connect a call when selected.
(2) Download: Download contacts from connected Bluetooth® Wireless Technology devices.

\* NOTICE

- Only supported contacts format can be downloaded and displayed from the Bluetooth® Wireless device, contacts from some applications will not be included.
- Up to 2,000 contacts can be saved.
- In some cases, additional confirmation from your Bluetooth® Wireless Technology device is necessary when downloading contacts. If downloading of contacts is unsuccessful, consult your Bluetooth® Wireless Technology device’s settings or the audio screen to approve the download.
- Contacts without phone numbers are not displayed.
Audio system

**Dial**
Press the [PHONE] button on the audio system ➞ Select [Dial].

(1) Phone number entry window: The phone number entered using the keypad is displayed.

(2) Clear
- Press to delete individual digits.
- Press and hold to delete the entire phone number.

(3) Keypad: Enter phone number.
(4) Bluetooth® Wireless Technology phone name
- The name of the connected Bluetooth® Wireless Technology device is displayed.
- Contacts matching the keypad number/letter input are displayed.

(5) Call
- Enter and select a phone number to call.
- Select without entering a phone number to see the most recent dialed call.

**Connections**
Press the [PHONE] button on the audio system ➞ Select [Connections].
- For connections setting, refer to Setup ➞ Select [Bluetooth] ➞ Select [Connections] page.

**Setup**
Press the [PHONE] button on the audio system ➞ Select [Settings].
- For more details, refer to Setup ➞ Bluetooth page.
Voice Recognition

 NOTICE
 - Using the Voice Recognition

Voice recognition is a safety technology that recognizes user voice commands and executes multimedia functions during driving.

Unfortunately, due to technical limitations, the system is unable to recognize all voice commands. To address these limitations, the voice commands that the system recognizes are displayed on the screen. Use the displayed commands.

Because human speech varies, voice recognition is sometimes unable to properly recognize user voice commands. In these cases, repeat the voice command displayed on the screen, or use the button on the screen to execute the desired function.

Precautions to ensure smooth voice recognition

- If the language setting is Korean, voice recognition is not supported.
- Voice recognition only supports voice commands indicated on-screen or in the user manual.
- For proper voice recognition, speak after the beep, which sounds after voice notification.
- Voice recognition automatically stops in the following events.
  1) Outgoing and incoming phone calls.
  2) Media (USB, etc.) is connected (voice recognition mode is maintained when iPod®s are connected).
  3) Rear camera is activated (if equipped).
  4) Vehicle is started or engine is turned off.
  5) Screen transition buttons, such as [RADIO] or [MEDIA], are selected.
  6) When a pop-up message is displayed on the screen due to accidental execution of the voice recognition function.

- The voice recognition microphone is located above the driver's seat. To ensure proper voice recognition, state voice commands while maintaining proper driving posture.

Better voice recognition is possible if you speak naturally and clearly, as you would in normal conversation.

In the following situations, outdoor noise may prevent proper voice recognition.

1) Wind noise from an open window or sunroof may disrupt voice recognition.

2) Operating the climate blower at a high level may cause wind noise that disrupts voice recognition. The recommended setting is 3 or below.

3) When passing through tunnels, vehicle echoes may disrupt voice recognition.

4) When passing over uneven terrain, vehicle noise may disrupt voice recognition.

5) Noise from rain in heavy storms may disrupt voice recognition.
Starting/ending voice recognition, and settings

Starting voice recognition
Press the [VOICE] button on the steering wheel remote control to start voice recognition and see the voice recognition screen.

Ending voice recognition
- In voice recognition mode, say the command ‘Exit’ to end voice recognition.
- Press the [Exit] on the bottom left corner of the screen to end voice recognition.
- Press and hold the [VOICE] button on the steering wheel remote control to end voice recognition.

Quick-starting voice recognition (manual control)
- Normally, to start voice recognition, you must wait for the voice prompt before saying a command. This involves some waiting time. To run the function immediately to select the commands displayed on the screen.
- This feature is useful if the voice prompt takes too long or the system fails to properly recognize your voice commands.
Skip voice prompt
• While the voice prompt is playing, press the [VOICE] button on the steering wheel remote control to skip the voice prompt and place the system in standby for your voice commands.
• This feature is useful if the voice prompt takes too long or you already know the voice command for the desired function.

Extending voice recognition standby time
• After voice recognition is started and the voice prompt and beep sound (‘Beep~’) are played, the system enters standby for user voice commands for five seconds. During this five-second standby, press the button again to play the beep sound (‘Beep~’), and extend voice command standby time by five seconds.
• If you do not say a command for five seconds, you are prompted by voice to repeat your command.
Audio system

Adjusting voice prompt volume
• While voice recognition is running, turn the VOL knob for the audio to adjust voice prompt volume.

* NOTICE
The minimum voice prompt volume is 1.

Guide to the voice recognition screen
Voice recognition start screen

(1) Four most frequently used commands: The four most frequently used commands are displayed.

(2) Commands requiring additional settings: Commands that require additional settings before use are displayed.

(3) Voice status icon display.
- Voice recognition standby.
- Voice prompt in progress.
- Processing voice command.

(4) User voice volume: User voice volume is displayed in real time.

(5) Recognition results: Results for voice command input are displayed.
(6) Help: Available voice commands displayed in stages.

(7) Exit: End voice recognition.

Voice recognition Help screen

(1) List of voice commands
- Available voice commands are displayed.
- Select or state each command to bring up additional detailed commands.

(2) Voice recognition instructions by item: Voice recognition instructions are displayed by item.

(3) Voice recognition usage instructions: General instructions for use of voice recognition are displayed.

Voice recognition usage instructions screen

- Usage instructions display: Detailed instructions on voice instruction usage.
- Close: Close the voice recognition usage instructions screen and show the previous screen.

* NOTICE
- Voice recognition is disabled in the voice recognition usage instructions screen. Only manual controls are supported.
- The voice recognition usage instructions screen provides a large amount of information. For safety, the screen is disabled while driving.

List of voice commands

Voice command types
- Voice commands are categorized into ‘Global Commands’ and ‘Local Commands’.

1) Global Commands (●): Commands that can be used immediately after voice recognition is started.

2) Local Commands (○): Commands that can be used when radio, media or Bluetooth® Wireless Technology phone functions are running or displayed on the screen after voice recognition is started.
Phone voice commands
• Voice commands associated with phone functions can be used after a Bluetooth® Wireless Technology device has been connected.
• To use voice commands using contact names, such as ‘Call John Smith’, download contacts beforehand.
• After contacts are downloaded over Bluetooth® Wireless Technology, some time may be required for conversion of contact info into voice data. During this conversion, phone calls cannot be made by saying contact names. The time required for contact info conversion depends on the number of entries in Contacts.
• When the ‘Call <Name>’ command is used, the name info saved in the downloaded contacts is used. If a friend with the name ‘John Smith’ is saved to Contacts under the nickname ‘Buddy’, ‘Call John Smith’ is not recognized as a valid command. Instead, ‘Call Buddy’ is recognized.

         | • ‘First’, ‘Second’ and other ordinal numbers are recognized. |
| Yes/No  | Used to answer questions asked by the system during voice recognition. |
| Previous/Next | If more than four search results are returned, these voice commands can be used to navigate to the previous or next page. |
Siri

**NOTICE - Using Siri**

• Android device is not supported to use Siri.
• If you want to use Siri, you have to connect your iOS device to the multimedia system through Bluetooth® Wireless Technology. (Please check whether your iOS device supports Siri and turning Siri On)
• If the iOS version is changed, the functions and response may be different according to the iOS device and the latest version.
• Siri automatically stops in the following events.
  1) Outgoing and incoming phone calls.
  2) Media (USB, etc.) is connected. (Siri mode is maintained when iPod®s are connected)
  3) Rear camera is activated (if equipped).
  4) Vehicle is started or engine is turned off.

(Continued)

5) Screen transition buttons, such as RADIO or MEDIA, are selected.
6) When a pop-up message is displayed on the screen due to accidental execution of Siri.
• The microphone is located above the driver’s seat. To ensure proper Siri, state your voice while maintaining proper driving posture.

**Starting Siri**

Press and hold the [VOICE] button on the steering wheel remote control to start Siri and see the screen.

(1) Speak: Re-start Siri.
(2) Exit: End Siri.

**NOTICE**

• Functions and feedbacks from voice commands via Siri are executed in the iOS device.
• The Audio system only supports “Phone” related functions, other functions will be performed in your iOS device.
Setup is the screen to control Audio system settings. Press the [SETUP] button on the audio system.

**Setup**

Press the [SETUP] button on the audio system ➟ Select [Sound].
- **Position**: Sound balance and fader can be adjusted.
- **Tone**: Sound tone color can be adjusted.
- **Speed Dependent Volume**: Automatically adjust volume based on vehicle speed.
- **Beep**: Select whether to play a beep sound when the screen is touched.

**Display**

Press the [SETUP] button on the audio system ➟ Select [Display].
- **Mode**: Set the screen brightness to be adjusted automatically according to ambient lighting conditions or set the screen to stay bright or dark continuously.
- **Illumination**: The brightness of the audio screen can be changed.

**Date/Time**

Press the [SETUP] button on the audio system ➟ Select [Date/Time].
- **Set Time**: Set the time displayed on the audio screen.
- **Time Format**: Choose between 12-hour and 24-hour time formats.
- **Set Date**: Set the date displayed on the audio screen.

**Bluetooth**

Press the [SETUP] button on the audio system ➟ Select [Bluetooth].
- **Connections**: Control pairing, deletion, connection and disconnection of Bluetooth® Wireless Technology devices.
- **Auto Connection Priority**: Set the connection priority of Bluetooth® Wireless Technology devices when the vehicle is started.
- **Download Contacts**: Contacts can be downloaded from connected Bluetooth® Wireless Technology devices.
- **Bluetooth Voice Prompts**: Play or mute voice prompts for Bluetooth® Wireless Technology device pairing, connection and errors.

**WARNING**

- Date/Time Setting Distraction
  Adjusting the date/time setting while driving can result in a loss of vehicle control that may lead to an accident, severe personal injury, and death.
Audio system

**NOTICE**
- When paired devices are deleted, the call history and contacts of the device saved to the audio system are deleted.
- For Bluetooth® Wireless Technology connections with low connection priority, some time may be required for the connection to be established.
- Contacts can be downloaded only from the currently connected Bluetooth® Wireless Technology device.
- If no Bluetooth® Wireless Technology device is connected, the Download Contacts button is disabled.

**System**
Press the [SETUP] button on the audio system ➟ Select [System].
- Memory Information: View My Music memory usage.
- Voice Recognition Guidance: Adjust the length of the voice recognition prompt.
- Language: Change the user language.
- Default: Reset the audio system.

- System Information: At the System Information screen, Software version information, updates are available.
- System Update: At the System Information screen, insert the USB memory with the latest file downloaded, and then select the [Update] to begin updating. The system with then reboot automatically.

**NOTICE**
- The system resets to the default values, and all saved data and settings are lost.
- This product needs supplemented software updates and additional functions, which collectively may take some time to complete, depending on the amount of data.
- If the Power is disconnected or the USB is removed during an update, the data might be damaged. Please wait until the update is complete while engine is on.

**Screen Saver**
Set the information displayed when the audio system is switched off or the screen is turned off.
Press the [SETUP] button on the audio system ➟ Select [Screen Saver].
- Analog: An analog clock is displayed.
- Digital: A digital clock is displayed.
- None: No information is displayed.

**Display Off**
To prevent glare, the screen can be turned off with the audio system in operation.
Press the [SETUP] button on the audio system ➟ Select [Display Off].

**NOTICE**
Use ‘Screen Saver’ to set the information to be displayed when the screen is turned off.
Declaration of Conformity

FCC

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Caution: Any changes or modifications to this device not expressly approved by the party responsible for compliance could void your authority to operate the equipment.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.

This equipment should be installed and operated with minimum 20 cm between the radiator and your body. This transmitter must not be collocated or operating in conjunction with any other antenna or transmitter unless authorized to do so by the FCC.

Driving your vehicle

Be sure the exhaust system does not leak.

The exhaust system should be checked whenever the vehicle is raised to change the oil or for any other purpose. If you hear a change in the sound of the exhaust or if you drive over something that strikes the underneath side of the vehicle, have the exhaust system checked as soon as possible by an authorized Kia dealer.

⚠️ WARNING - Engine exhaust
Do not inhale exhaust fumes or leave your engine running in an enclosed area for a prolonged time. Exhaust fumes contain carbon monoxide, a colorless, odorless gas that can cause unconsciousness and death by asphyxiation.

⚠️ WARNING - Open tailgate
Do not drive with the tailgate open. Poisonous exhaust gases can enter the passenger compartment. If you must drive with the tailgate open proceed as follows:
1. Close all windows.
2. Open side vents.
3. Set the air intake control at “Fresh”, the air flow control at “Floor” or “Face” and the fan at the highest speed.

⚠️ CALIFORNIA PROPOSITION 65 WARNING
Engine exhaust and a wide variety of automobile components and parts, including components found in the interior furnishings in a vehicle, contain or emit chemicals known to the State of California to cause cancer and birth defects and reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.
Driving your vehicle

BEFORE DRIVING

Before entering vehicle

- Be sure that all windows, outside mirror(s), and outside lights are clean.
- Check the condition of the tires.
- Check under the vehicle for any sign of leaks.
- Be sure there are no obstacles behind you if you intend to back up.

Necessary inspections

Fluid levels, such as engine oil, engine coolant, brake fluid, and washer fluid should be checked on a regular basis, at the exact interval depending on the fluid. Further details are provided in chapter 8, “Maintenance”.

Before starting

- Close and lock all doors.
- Position the seat so that all controls are easily reached.
- Buckle your seat belt.
- Adjust the inside and outside rearview mirrors.
- Be sure that all lights work.
- Check all gauges.
- Check the operation of warning lights when the ignition switch is turned to the ON position.
- Release the parking brake and make sure the brake warning light goes out.

**WARNING**

Driving while distracted can result in a loss of vehicle control, that may lead to an accident, severe personal injury, and death. The driver's primary responsibility is in the safe and legal operation of a vehicle, and use of any handheld devices, other equipment, or vehicle systems which take the driver's eyes, attention and focus away from the safe operation of a vehicle or which are not permissible by law should never be used during operation of the vehicle.

For safe operation, be sure you are familiar with your vehicle and its equipment.
Driving your vehicle

⚠️ **WARNING - Fire risk**
When you intend to park or stop the vehicle with the engine on, be careful not to depress the accelerator pedal for a long period of time. It may overheat the engine or exhaust system and cause fire.

⚠️ **WARNING - Check surroundings**
Always check the surrounding areas near your vehicle for people, especially children, before putting a vehicle into D (Drive) or R (Reverse).

⚠️ **WARNING - Loose objects**
Securely store items in your vehicle. When you make a sudden stop or turn the steering wheel rapidly, loose objects may drop on the floor and it could interfere with the operation of the foot pedals, possibly causing an accident.

⚠️ **WARNING - Driving while intoxicated**
Do not drive while intoxicated. Drinking and driving is dangerous. Even a small amount of alcohol will affect your reflexes, perceptions and judgment. Driving while under the influence of drugs is as dangerous as or more dangerous than driving drunk.
Driving your vehicle

KEY POSITIONS (IF EQUIPPED)

Illuminated ignition switch

Whenever a front door is opened, the ignition switch will illuminate for your convenience, provided the ignition switch is not in the ON position. The light will go off immediately when the ignition switch is turned on. It will also go off after about 30 seconds when the door is closed.

Ignition switch position

LOCK

The steering wheel locks to protect against theft (if equipped). The ignition key can be removed only in the LOCK position.

ON

The warning lights can be checked before the engine is started. This is the normal running position after the engine is started.

Do not leave the ignition switch ON if the engine is not running to prevent battery discharge.

START

Turn the ignition switch to the START position to start the engine. The engine will crank until you release the key; then it returns to the ON position. The brake warning light can be checked in this position.

ACC (Accessory)

The steering wheel is unlocked and electrical accessories are operative. If difficulty is experienced turning the ignition switch to the ACC position, turn the key while turning the steering wheel right and left to release the tension.
Driving your vehicle

The anti-theft steering column lock (if equipped) is not a substitute for the parking brake. Before leaving the driver’s seat, always make sure the shift lever is engaged in 1st gear for the manual transaxle or P (Park) for automatic transaxle, set the parking brake fully and shut the engine off. Unexpected and sudden vehicle movement may occur if these precautions are not taken.

Starting the engine

1. Make sure the parking brake is applied.
2. **Manual Transaxle** - Depress the clutch pedal fully and shift the transaxle into Neutral. Keep the clutch pedal and brake pedal depressed while turning the ignition switch to the start position.

   **Automatic Transaxle / Dual clutch transmission** - Place the transaxle shift lever in P (Park). Depress the brake pedal fully.

   You can also start the engine when the shift lever is in the N (Neutral) position.

3. Turn the ignition switch to START and hold it there until the engine starts (a maximum of 10 seconds), then release the key.

   *It should be started without depressing the accelerator.*
Driving your vehicle

Manual Transaxle
To start the vehicle, keep the clutch pedal and brake pedal depressed, and make sure the engine RPM is within normal range (under 1000 rpm). After checking, shift the transaxle shift lever to the desired position.
Unlock the parking brake, and take your foot off the clutch pedal. Then, lightly depress the accelerator pedal and slowly start the vehicle.
4. Do not wait for the engine to warm up while the vehicle remains stationary.
Start driving at moderate engine speeds. (Steep accelerating and decelerating should be avoided.)

⚠️ CAUTION - Starter
If the engine stalls while you are in motion, do not attempt to move the shift lever to the P (Park) position. If traffic and road conditions permit, you may put the shift lever in the N (Neutral) position while the vehicle is still moving and turn the ignition switch to the START position in an attempt to restart the engine.

Do not engage the starter for more than 10 seconds. If the engine stalls or fails to start, wait 5 to 10 seconds before re-engaging the starter. Improper use of the starter may damage it.

Stopping manual transaxle vehicles
1. After safely parking the vehicle, press the clutch pedal and brake pedal at the same time.
2. While depressing the clutch pedal and brake pedal at the same time, shift the transaxle lever to ‘N’.

⚠️ WARNING - Steering wheel
Never reach for any controls through the steering wheel while the vehicle is in motion. The presence of your hand or arm in this area could cause a loss of vehicle control.
**ENGINE START/STOP BUTTON (IF EQUIPPED)**

**Illuminated ENGINE START/STOP button**

Whenever the front door is opened, the ENGINE START/STOP button will illuminate for your convenience. The light will go off after about 30 seconds when the door is closed.

When all entrances are closed, if you lock the vehicle by using the transmitter or the smart key, the light will go off immediately.

**ENGINE START/STOP button position**

- **OFF**

  ![Not illuminated]

**• With manual transaxle**

To turn off the engine (START/RUN position) or vehicle power (ON position), stop the vehicle then press the engine start/stop button.

**• With automatic transaxle / dual clutch transmission**

To turn off the engine (START/RUN position) or vehicle power (ON position), press the ENGINE START/STOP button with the shift lever in the P (Park) position. When you press the ENGINE START/STOP button without the shift lever in the P (Park) position, the ENGINE START/STOP button will not change to the OFF position but to the ACC position.

In an emergency situation while the vehicle is in motion, you are able to turn the engine off and to the ACC position by pressing the ENGINE START/STOP button for more than 2 seconds or 3 times successively within 3 seconds. If the vehicle is still moving, you can restart the engine without depressing the brake pedal by pressing the ENGINE START/STOP button with the shift lever in the N (Neutral) position.
Driving your vehicle

**ACC (Accessory)**

- With manual transaxle
  Press the engine start/stop button when the button is in the OFF position without depressing the clutch pedal.

- With automatic transaxle / dual clutch transmission
  Press the ENGINE START/STOP button while it is in the OFF position without depressing the brake pedal. If the ENGINE START/STOP button is in the ACC position for more than 1 hour, the button is turned off automatically to prevent battery discharge.

**ON**

- With manual transaxle
  Press the engine start/stop button when the button is in the ACC position without depressing the clutch pedal.

- With automatic transaxle / dual clutch transmission
  Press the ENGINE START/STOP button while it is in the ACC position without depressing the brake pedal. The warning lights can be checked before the engine is started. Do not leave the ENGINE START/STOP button in the ON position for a long time. The battery may discharge, because the engine is not running.

**START/RUN**

- With manual transaxle
  To start the engine, depress the brake pedal and press the ENGINE START/STOP button with the shift lever in the N (Neutral) position. For your safety, start the engine with the shift lever in the P (Park) position.

- With automatic transaxle / dual clutch transmission
  To start the engine, depress the brake pedal and press the ENGINE START/STOP button with the shift lever in the P (Park) or the N (Neutral) position. For your safety, start the engine with the shift lever in the P (Park) position.
Driving your vehicle

If you press the ENGINE START/STOP button without depressing the clutch pedal for manual transaxle vehicles or without depressing the brake pedal for automatic transaxle vehicles, the engine will not start and the ENGINE START/STOP button changes as follow:
OFF ➔ ACC ➔ ON ➔ OFF or ACC

✽ NOTICE
If you leave the ENGINE START/STOP button in the ACC or ON position for a long time, the battery will discharge.

⚠️ WARNING - Starting vehicle
Never press the ENGINE START/STOP button while the vehicle is in motion except in an emergency. If the engine stops while the vehicle is in motion, this would result in loss of directional control and braking function, which could cause an accident.

⚠️ WARNING - Leaving the Vehicle
To avoid unexpected or sudden vehicle movement, never leave your vehicle if the transmission is not locked in the P (Park) position and the parking brake is fully engaged. Before leaving the driver's seat, always make sure the shift lever is engaged in P (Park), set the parking brake fully and shut the engine off.

Starting the engine with a smart key (if equipped)
1. Carry the smart key or leave it inside the vehicle.
2. Make sure the parking brake is firmly applied
3. Manual Transaxle - Depress the clutch pedal fully and shift the transaxle into Neutral. Keep the clutch pedal and brake pedal depressed while starting the engine.
   Automatic transaxle / Dual clutch transmission - Place the transaxle shift lever in P (Park). Depress the brake pedal fully.
   You can also start the engine when the shift lever is in the N (Neutral) position.
4. Press the ENGINE START/STOP button while depressing the brake pedal.
   It should be started without depressing the accelerator.

⚠️ CAUTION
If the driver takes foot off the clutch pedal of a manual transaxle vehicle before the engine is fully started, the engine may not start.
Make sure to fully depress the clutch pedal and brake pedal to start the engine.
Driving your vehicle

Manual Transaxle
To start the vehicle, keep the clutch pedal and brake pedal depressed, and make sure the engine RPM is within normal range (under 1000 rpm). After checking, shift the transaxle shift lever to the desired position.
Unlock the parking brake, and take your foot off the clutch pedal. Then, lightly depress the accelerator pedal and slowly start the vehicle.

5. Do not wait for the engine to warm up while the vehicle remains stationary.
Start driving at moderate engine speeds. (Steep accelerating and decelerating should be avoided.)
• Even if the smart key is in the vehicle, if it is far away from you, the engine may not start.
• When the ENGINE START/STOP button is in the ACC position or above, if any door is opened, the system checks for the smart key. If the smart key is not in the vehicle, a message "key is not in the vehicle" will appear on the LCD display. And if all doors are closed, the chime will sound for 5 seconds. The indicator or warning will turn off while the vehicle is moving. Always have the smart key with you.

⚠️ CAUTION - Starter
If the engine stalls while the vehicle is in motion, do not attempt to move the shift lever to the P (Park) position. If the traffic and road conditions permit, you may put the shift lever in the N (Neutral) position while the vehicle is still moving and press the ENGINE START/STOP button in an attempt to restart the engine.
Stopping manual transaxle vehicles

1. After safely parking the vehicle, press the clutch pedal and brake pedal at the same time.
2. While depressing the clutch pedal and brake pedal at the same time, shift the transaxle lever to ‘N’.

⚠️ WARNING - Unintended vehicle movement

Never leave the smart key in the vehicle with children or vehicle occupants who are unfamiliar with the vehicle operation. Pushing the ENGINE START/STOP button while the smart key is in the vehicle may result in unintended engine activation and/or unintended vehicle movement.

- If the battery is weak or the smart key does not work correctly, you can start the engine by pressing the engine start/stop button with the smart key.

  The side with the lock button should contact the engine start/stop button directly.

  When you press the engine start/stop button directly with the smart key, the smart key should contact the button at a right angle.

- When the stop lamp fuse is blown, you can’t start the engine normally. Replace the fuse with a new one. If it is not possible, you can start the engine by pressing the ENGINE START/STOP button for 10 seconds while it is in the ACC position. The engine can start without depressing the brake pedal. But for your safety always depress the brake pedal before starting the engine.

Do not press the ENGINE START/STOP button for more than 10 seconds except when the stop lamp fuse is blown.
Driving your vehicle

MANUAL TRANSAXLE (IF EQUIPPED)

Manual transaxle operation

- The manual transaxle has 6 forward gears. This shift pattern is imprinted on the shift knob. The transaxle is fully synchronized in all forward gears so shifting to either a higher or a lower gear is easily accomplished.
- Press the clutch pedal down fully while shifting, then release it slowly. If your vehicle is equipped with an ignition lock switch, the engine will not start when starting the engine without depressing the clutch pedal. (if equipped)
- In order to start the vehicle, slowly let go of the fully depressed clutch pedal. Then, push the accelerator pedal to start.
- The gearshift lever must be returned to the neutral position before shifting into R (Reverse).
- Make sure the vehicle is completely stopped before shifting into R (Reverse).

Never operate the engine with the tachometer (rpm) in the red zone.

CAUTION - Downshifting

- When downshifting from 5 (Fifth) gear to 4 (Fourth) gear, caution should be taken not to inadvertently move the shift lever sideways in such a manner that second gear is engaged. Such a drastic downshift may cause the engine speed to increase to the point that the tachometer will enter the red-zone. Such overrevving of the engine may possibly cause engine and transaxle damage.
- Do not downshift more than 2 gears or downshift the gear when the engine is running at high speed (5,000 RPM or higher). Such a downshifting may damage the engine, clutch and the transaxle.

(Continued)
Driving your vehicle

(Continued)

- When shifting between 5th and 6th gear, you should always push the gear level all the way to the right. You could otherwise shift unintentionally into 3rd or 4th gear and damage the transaxle.

- During cold weather, shifting may be difficult until the transaxle lubricant has warmed up. This is normal and not harmful to the transaxle.

- If you’ve come to a complete stop and it's hard to shift into 1st or R (Reverse), put the shift lever in N (Neutral) position and release the clutch. Press the clutch pedal back down, and then shift into 1st or R (Reverse) gear position.

⚠️ CAUTION

- To avoid premature clutch wear and damage, do not drive with your foot resting on the clutch pedal. Also, don’t use the clutch to hold the vehicle stopped on an uphill grade, while waiting for a traffic light, etc.

- Do not use the shift lever as a handrest during driving, as this can result in premature wear of the transaxle shift forks.

- When operating the clutch pedal, depress the clutch pedal down fully. If you don’t depress the clutch pedal fully, the clutch may be damaged or noise may occur.

- To prevent possible damage to the clutch system, do not start with the 2nd (second) gear engaged except when you start on a slippery road.

- Do not exceed the maximum weight limits of the loading weight. Improper loading can result in damage to clutch system.

⚠️ WARNING - Incline parking

- Before leaving the driver’s seat, always set the parking brake fully and shut the engine off. Then make sure the transaxle is shifted into 1st gear when the vehicle is parked on a level or uphill grade, and shifted into R (Reverse) on a downhill grade. Unexpected and sudden vehicle movement can occur if these precautions are not followed in the order identified.

- If your vehicle has a manual transaxle not equipped with a ignition lock switch, it may move and cause a serious accident when starting the engine without depressing the clutch pedal while the parking brake is released and the shift lever not in the neutral position.
Driving your vehicle

Using the clutch
The clutch should be pressed all the way to the floor before shifting, then released slowly. The clutch pedal should always be fully released while driving. Do not rest your foot on the clutch pedal while driving. This can cause unnecessary wear. Do not partially engage the clutch to hold the vehicle on an incline. This causes unnecessary wear. Use the foot brake or parking brake to hold the vehicle on an incline. Do not operate the clutch pedal rapidly and repeatedly.

⚠️ WARNING - Engine Brake Use
Do not use the engine brake (shifting from a high gear to lower gear) rapidly on slippery roads. The vehicle may slip causing an accident.

⚠️ CAUTION
- If half-clutch*1) driving style is adopted, or driver’s foot is placed on the pedal while driving, the clutch may be damaged or worn out prematurely.
- While parking on a steep grade, do not use half clutch method to park the vehicle. It will cause premature wear of the clutch disc.
- While driving at fast speed, do not abruptly shift to low speed. It may lead to engine and transaxle damage.

*1): Half clutch?
A condition where the clutch is half-engaged and sliding. It may occur when the clutch pedal is partially depressed (not fully depressed), or vehicle power is transferred to the clutch before the pedal is fully let go.
Driving your vehicle

Downshifting
When you must slow down in heavy traffic or while driving up steep hills, downshift before the engine starts to labor. Downshifting reduces the chance of stalling and gives better acceleration when you again need to increase your speed. When the vehicle is traveling down steep hills, downshifting helps maintain safe speed and prolongs brake life.

Good driving practices
- Never take the vehicle out of gear and coast down a hill. This is extremely hazardous. Always leave the vehicle in gear.
- Don't "ride" the brakes. This can cause them to overheat and malfunction. Instead, when you are driving down a long hill, slow down and shift to a lower gear. When you do this, engine braking will help slow down the vehicle.
- Slow down before shifting to a lower gear. This will help avoid over-revving the engine, which can cause damage.
- Slow down when you encounter cross winds. This gives you much better control of your vehicle.
- Be sure the vehicle is completely stopped before you attempt to shift into reverse. The transaxle can be damaged if you do not. To shift into reverse, depress the clutch, move the shift lever to neutral, then shift to the reverse position.

CAUTION
- When starting a fully stopped vehicle, refrain to start in 2nd gear. When starting in 2nd gear, abnormal clutch disc friction heat may occur and result in clutch cover and clutch disc damage.
- When the vehicle is in motion, please refrain from using half clutch. The use of half clutch while the vehicle is in motion may result in early clutch disc wear, abnormal vibration or noise.
- The clutch pedal should be depressed fully for any operation. When letting go of the depressed pedal, make sure not to depress the pedal again before the pedal goes back to its initial position. If such unintended re-depressing occurs, the clutch system may be damaged.

CAUTION
- When starting a fully stopped vehicle, refrain to start in 2nd gear. When starting in 2nd gear, abnormal clutch disc friction heat may occur and result in clutch cover and clutch disc damage.
- When the vehicle is in motion, please refrain from using half clutch. The use of half clutch while the vehicle is in motion may result in early clutch disc wear, abnormal vibration or noise.
- The clutch pedal should be depressed fully for any operation. When letting go of the depressed pedal, make sure not to depress the pedal again before the pedal goes back to its initial position. If such unintended re-depressing occurs, the clutch system may be damaged.
Driving your vehicle

- Exercise extreme caution when driving on a slippery surface. Be especially careful when braking, accelerating or shifting gears. On a slippery surface, an abrupt change in vehicle speed can cause the drive wheels to lose traction and the vehicle to go out of control.
- Always buckle-up! In a collision, an unbelted occupant is significantly more likely to be seriously injured or killed than a properly belted occupant.
- Avoid high speeds when cornering or turning. High speed cornering and turning increase the risk of vehicle rollover. Rollover accidents are violent and unpredictable.
- Never exceed posted speed limits.

**WARNING**

- Always buckle-up! In a collision, an unbelted occupant is significantly more likely to be seriously injured or killed than a properly belted occupant.
- Avoid high speeds when cornering or turning.
- Do not make quick steering wheel movements, such as sharp lane changes or fast, sharp turns.
- The risk of rollover is greatly increased if you lose control of your vehicle at highway speeds.
- Loss of control often occurs if two or more wheels drop off the roadway and the driver oversteers to reenter the roadway.
- In the event your vehicle leaves the roadway, do not steer sharply. Instead, slow down before pulling back into the travel lanes.
- Never exceed posted speed limits.
Driving your vehicle

Automatic transaxle operation

The automatic transaxle has 6 forward speeds and one reverse speed. The individual speeds are selected automatically, depending on the position of the shift lever.

**NOTICE**

The first few shifts on a new vehicle, if the battery has been disconnected, may be somewhat abrupt. This is a normal condition, and the shifting sequence will adjust after shifts are cycled a few times by the TCM (Transaxle Control Module) or PCM (Powertrain Control Module).

Depress the brake pedal and the lock release button when shifting.

(If the shift lock system is not equipped, it is not necessary to depress the brake pedal. However, it is recommended to depress the brake pedal to avoid inadvertent movement of the vehicle.)

Press the lock release button when shifting.

The shift lever can be shifted freely.
For smooth operation, depress the brake pedal and the lock release button when shifting from N (Neutral) to a forward or reverse gear.

**CAUTION - Transaxle**

To avoid damage to your transaxle, do not accelerate the engine in R (Reverse) or any forward gear position with the brakes on. The transaxle may be damaged if you shift into P (Park) while the vehicle is in motion.

When stopped on an incline, do not hold the vehicle with the engine power. Use the service brake or the parking brake.

**WARNING - Leaving the Vehicle**

To avoid unexpected or sudden vehicle movement, never leave your vehicle if the transmission is not locked in the P (Park) position and the parking brake is fully engaged. Before leaving the driver’s seat, always make sure the shift lever is engaged in P (Park), set the parking brake fully and shut the engine off.

**Transaxle ranges**

The indicator in the instrument cluster displays the shift lever position when the ignition switch is in the ON position.

**P (Park)**

Always come to a complete stop before shifting into P (Park). This position locks the transaxle and prevents the drive wheels from rotating. Shifting into P (Park) while the vehicle is in motion will cause the drive wheels to lock which will cause you to lose control of the vehicle.
R (Reverse)
Use this position to drive the vehicle backward.

⚠️ CAUTION - Shifting
Always come to a complete stop before shifting into or out of R (Reverse); you may damage the transaxle if you shift into R (Reverse) while the vehicle is in motion, except when “Rocking the vehicle” explained in this section.

N (Neutral)
The wheels and transaxle are not engaged. The vehicle will roll freely even on the slightest incline unless the parking brake or service brakes are applied.

- Parking in N (Neutral) gear
Follow below steps when parking and you want the vehicle to move when pushed.

1. After parking your vehicle, step on the brake pedal and move the shift lever to [P] with the ignition button in [ON] or while the engine is running.
2. If the parking brake is applied, unlock the parking brake.
3. While pressing the brake pedal, turn the ignition button [OFF].
   - For smart key equipped vehicles, the ignition switch can be moved to [OFF] only when the shift lever is in [P].
4. Change the gear shift lever to [N] (Neutral) while pressing the brake pedal and pushing [SHIFT LOCK RELEASE] button or inserting, pressing down a tool (e.g. flathead screw-driver) into the [SHIFT LOCK RELEASE] access hole at the same time. Then, the vehicle will move when external force is applied.

⚠️ CAUTION
• With the exception of parking in neutral gear, always park the vehicle in [P] (Park) for safety and engage the parking brake.
• Before parking in [N] (Neutral) gear, first make sure the parking ground is level and flat. Do not park in [N] gear on any slopes or gradients. If parked and left in [N], the vehicle may move and cause serious damage and injury.
Driving your vehicle

D (Drive)
This is the normal forward driving position. The transaxle will automatically shift through a 6-gear sequence, providing the best fuel economy and power.

For extra power when passing another vehicle or climbing grades, depress the accelerator fully, at which time the transaxle will automatically downshift to the next lower gear.

In sports mode, moving the shift lever backwards and forwards will allow you to make gearshifts rapidly. In contrast to a manual transaxle, the sports mode allows gearshifts with the accelerator pedal depressed.

Up (+): Push the lever forward once to shift up one gear.

Down (-): Pull the lever backwards once to shift down one gear.

Sports mode
Whether the vehicle is stationary or in motion, sports mode is selected by pushing the shift lever from the D (Drive) position into the manual gate. To return to D (Drive) range operation, push the shift lever back into the main gate.
Driving your vehicle

- In sports mode, the driver must execute upshifts in accordance with road conditions, taking care to keep the engine speed below the red zone.
- In sports mode, only the 6 forward gears can be selected. To reverse or park the vehicle, move the shift lever to the R (Reverse) or P (Park) position as required.
- In sports mode, downshifts are made automatically when the vehicle slows down. When the vehicle stops, 1st gear is automatically selected.
- In sports mode, when the engine rpm approaches the red zone shift points are varied to upshift automatically.
- To maintain the required levels of vehicle performance and safety, the system may not execute certain gearshifts when the shift lever is operated.
- When driving on a slippery road, push the shift lever forward into the +(up) position. This causes the transaxle to shift into the 2nd gear which is better for smooth driving on a slippery road. Push the shift lever to the -(down) side to shift back to the 1st gear.

Shift lock system
For your safety, the automatic transaxle has a shift lock system which prevents shifting the transaxle from P (Park) into R (Reverse) unless the brake pedal is depressed. To shift the transaxle from P (Park) into R (Reverse):
1. Depress and hold the brake pedal.
2. Start the engine or turn the ignition switch to the ON position.
3. Move the shift lever.
If the brake pedal is repeatedly depressed and released with the shift lever in the P (Park) position, a chattering noise near the shift lever may be heard. It is a normal condition.

⚠️ WARNING - Shifting from park
Always fully depress the brake pedal before and while shifting out of the P (Park) position into another position to avoid inadvertent motion of the vehicle which could injure persons in or around the vehicle.
Shift-lock override
If the shift lever cannot be moved from the P (Park) position into R (Reverse) position with the brake pedal depressed, continue depressing the brake, then do the following:
1. Carefully remove the cap covering the shift-lock access hole (1).
2. Insert a screwdriver into the access hole and press down on the screwdriver.
3. Move the shift lever.
4. Have your vehicle inspected by an authorized Kia dealer immediately.

Ignition key interlock system
The ignition key cannot be removed unless the shift lever is in the P (Park) position. Even if the ignition switch is in the LOCK position, the key also cannot be removed.
If your vehicle is equipped with ENGINE START/STOP button, the button will not change to the OFF position unless the shift lever is in the P (Park) position.

Good driving practices
- Never move the gear shift lever from P (Park) to any other position with the accelerator pedal depressed.
- Never move the gear shift lever into P (Park) when the vehicle is in motion.
- Slow down before shifting to a lower gear. Otherwise, the lower gear may not be engaged.
- Always use the parking brake. Do not depend on placing the transaxle in P (Park) to keep the vehicle from moving.
- Optimum vehicle performance and economy is obtained by smoothly depressing and releasing the accelerator pedal.
Moving up a steep grade from a standing start
To move up a steep grade from a standing start, depress the brake pedal, shift the shift lever to D (Drive). Select the appropriate gear depending on load weight and steepness of the grade, and release the parking brake. Depress the accelerator gradually while releasing the service brakes.
Driving your vehicle

DUAL CLUTCH TRANSMISSION (DCT) (IF EQUIPPED)

The dual clutch transmission has seven forward speeds and one reverse speed. The individual speeds are selected automatically in the D (Drive) position.

Depress the brake pedal and press the shift button while moving the shift lever.

Press the shift button while moving the shift lever.

The shift lever can freely operate.

To move the shift lever from/to P (Parking) or between R (Reverse) and D (Drive), you must depress the brake pedal for the vehicle to stand still.
Driving your vehicle

Driving your vehicle

The dual clutch transmission can be thought of as an automatically shifting manual transaxle. It gives the driving feel of a manual transaxle, yet provides the ease of a fully automatic transaxle.

When D (Drive) is selected, the transmission will automatically shift through the gears similar to a conventional automatic transaxle. Unlike a traditional automatic transaxle, the gear shifting can sometimes be felt and heard as the actuators engage the clutches and the gears are selected.

The dry-type clutch transfers torque more directly and provides a direct drive feeling which may feel different from a conventional automatic transaxle with a torque converter. This may be more noticeable when launching the vehicle from a stop or when traveling at low, stop-and-go vehicle speeds.

WARNING
To reduce the risk of serious injury or death:

- ALWAYS check the surrounding areas near your vehicle for people, especially children, before shifting a vehicle into D (Drive) or R (Reverse).
- Before leaving the driver's seat, always make sure the shift lever is in the P (Park) position, then set the parking brake, and place the ignition switch in the LOCK/OFF position. Unexpected and sudden vehicle movement can occur if this procedure is not followed.
- Do not use the engine braking (shifting from a high gear to lower gear) rapidly on slippery roads. The vehicle may slip causing an accident.

CAUTION
To avoid damage to your transmission, do not try to accelerate in R (Reverse) or any forward gear position with the brakes on.

- The dual clutch transmission adopts a dry-type dual clutch, which is different from the torque converter of the automatic transaxle. It shows better acceleration performance and increased fuel efficiency while driving but initial launch might be little bit slower than the automatic transaxle.

As a result, gear shifts are sometimes more noticeable than a conventional automatic transmission and a light vibration during launching can be felt as the transmission speed is matched with the engine speed. This is a normal condition of the dual clutch transmission.

CAUTION
To avoid damage to your transmission, do not try to accelerate in R (Reverse) or any forward gear position with the brakes on.

- The dual clutch transmission adopts a dry-type dual clutch, which is different from the torque converter of the automatic transaxle. It shows better acceleration performance and increased fuel efficiency while driving but initial launch might be little bit slower than the automatic transaxle.

As a result, gear shifts are sometimes more noticeable than a conventional automatic transmission and a light vibration during launching can be felt as the transmission speed is matched with the engine speed. This is a normal condition of the dual clutch transmission.

CAUTION
To avoid damage to your transmission, do not try to accelerate in R (Reverse) or any forward gear position with the brakes on.

- The dual clutch transmission adopts a dry-type dual clutch, which is different from the torque converter of the automatic transaxle. It shows better acceleration performance and increased fuel efficiency while driving but initial launch might be little bit slower than the automatic transaxle.

As a result, gear shifts are sometimes more noticeable than a conventional automatic transmission and a light vibration during launching can be felt as the transmission speed is matched with the engine speed. This is a normal condition of the dual clutch transmission.
Driving your vehicle

- When rapidly accelerating at low speeds, the engine could rev at a high rpm depending on the driving conditions.
- For smooth launch uphill, press down the accelerator pedal smoothly depending on the current conditions.
- If you release your foot from the accelerator pedal at low vehicle speed, you may feel strong engine braking, which is similar to manual transaxle.
- When driving downhill, you may use Sports Mode or press the paddle shifters (if equipped) to downshift to a lower gear in order to control your speed without using the brake pedal excessively.
- When you turn the engine on and off, you may hear clicking sounds as the system goes through a self test. This is a normal sound for the Dual Clutch Transmission.

- During the first 1,500 km (1,000 miles), you may feel that the vehicle may not be smooth when accelerating at low speed. During this break-in period, the shift quality and performance of your new vehicle is continuously optimized.

**NOTICE**
If your transmission should fail, your gear shift lever may not move and the position indicator (D,R,N, etc.) will blink on the cluster. If this occurs, have the system checked by an authorized Kia dealership.

**DCT warning messages**

This warning message is displayed when vehicle is driven slowly on a grade and the vehicle detects that the brake pedal is not applied.
**Steep grade**

Driving up hills or on steep grades:
- To hold the vehicle on an incline use the foot brake or the parking brake.
- When in stop-and-go traffic on an incline, keep some distance ahead before moving the vehicle forward. Then hold the vehicle on the incline with the foot brake.
- If the vehicle is held on a hill by applying the accelerator pedal or by creeping with brake pedal disengaged, the clutch and transmission may overheat which can result in damage. At this time, a warning message will appear on the LCD display.
- If the LCD warning is active, the foot brake must be applied.
- Ignoring the warnings can lead to damage to the transmission.

**Transmission high temperature**

- Under certain conditions, such as repeated stop-and-go launches on steep grades, sudden take off or acceleration, or other harsh driving conditions, the transmission clutch temperatures will increase excessively. Finally the clutch in transmission could be overheated.
- When the clutch is overheated, the safe protection mode engages and the gear position indicator on the cluster blinks with a chime. At this time, “Transmission temp. is high! Stop safely” warning message will appear on the LCD display and driving may not be smooth.
- If this occurs, pull over to a safe location, stop the vehicle with the engine running, apply the brakes and shift the vehicle to P (Park), and allow the transmission to cool.
- If you ignore this warning, the driving condition may become worse. You may experience abrupt shifts, frequent shifts, or jerkiness. To return to the normal driving condition, stop the vehicle and apply the foot brake or shift into P (Park). Then allow the transmission to cool for a few minutes with engine on, before driving off.
- When possible, drive the vehicle smoothly.
Driving your vehicle

- If the vehicle continues to be driven and the clutch temperatures reach the maximum temperature limit, the "Transmission Hot! Park with engine on" warning will be displayed. When this occurs the clutch is disabled until the clutch cools to normal temperatures.
- The warning will display a time to wait for the transmission to cool.
- If this occurs, pull over to a safe location, stop the vehicle with the engine running, apply the brakes and shift the vehicle to P (Park), and allow the transmission to cool.
- When the message "Trans cooled. Resume driving." appears you can continue to drive your vehicle.
- When possible, drive the vehicle smoothly.

If any of the warning messages in the LCD display continue to blink, for your safety, have the system checked by a professional workshop. Kia recommends to visit an authorized Kia dealer/service partner.

⚠️ CAUTION - Holding the Vehicle Using Accelerator Pedal

*Do not attempt to hold your vehicle on a hill by applying the accelerator pedal. This can cause your clutch and transmission to be damaged as a result of overheating.*
Driving your vehicle

Transmission ranges
The indicator in the instrument cluster displays the shift lever position when the ignition switch is in the ON position.

P (Park)
Always come to a complete stop before shifting into P (Park).
To shift from P (Park), you must depress firmly on the brake pedal and make sure your foot is off the accelerator pedal.

If you have done all of the above and still cannot shift the lever out of P (Park), see “Shift-Lock Release” in this chapter.
The shift lever must be in P (Park) before turning the engine off.

R (Reverse)
Use this position to drive the vehicle backward.

\begin{itemize}
  \item Always come to a complete stop before shifting into or out of R (Reverse); you may damage the transmission if you shift into R (Reverse) while the vehicle is in motion.
\end{itemize}

N (Neutral)
The wheels and transmission are not engaged.
Use N (Neutral) if you need to restart a stalled engine, or if it is necessary to stop with the engine ON. Shift into P (Park) if you need to leave your vehicle for any reason.
Always depress the brake pedal when you are shifting from N (Neutral) to another gear.
Driving your vehicle

D (Drive)
This is the normal driving position. The transmission will automatically shift through a seven-gear sequence, providing the best fuel economy and power.
For extra power when passing another vehicle or driving uphill depress the accelerator pedal further until you feel the transmission downshift to a lower gear.
The DRIVE MODE switch, located on the shift lever console, allows the driver to switch from NORMAL mode to SPORT or ECO mode. (if equipped)
For more information, refer to “Drive Mode Integrated Control System” later in this chapter.

WARNING
- Do not shift into gear unless your foot is firmly on the brake pedal. Shifting into gear when the engine is running at high speed can cause the vehicle to move very rapidly. You may lose control of the vehicle and cause accidents.
- Do not drive with the shift lever in N (Neutral).
The vehicle will not exhibit engine braking in N (Neutral).

* NOTICE
Always ensure vehicle is stationary, at a complete stop, before selecting D (Drive).

Sports mode
Whether the vehicle is stationary or in motion, sports mode is selected by pushing the shift lever from the D (Drive) position into the manual gate.
To return to D (Drive) range operation, push the shift lever back into the main gate.
In Sports Mode, moving the shift lever backwards and forwards will allow you to select the desired range of gears for the current driving conditions.
+ (Up) : Push the lever forward once to shift up one gear.
- (Down) : Pull the lever backwards once to shift down one gear.

★ NOTICE
In SPORT mode, the fuel efficiency may decrease.

★ NOTICE
• Only the seven forward gears can be selected. To reverse or park the vehicle, move the shift lever to the R (Reverse) or P (Park) position as required.
• Downshifts are made automatically when the vehicle slows down. When the vehicle stops, 1st gear is automatically selected.
• When the engine rpm approaches the red zone the transmission will upshift automatically.
• If the driver presses the lever to + (Up) or - (Down) position, the transmission may not make the requested gear change if the next gear is outside of the allowable engine rpm range. The driver must execute upshifts in accordance with road conditions, taking care to keep the engine rpms below the red zone.

Shift lock system (if equipped)
For your safety, the Dual clutch transmission has a shift lock system which prevents shifting the transmission from P (Park) into R (Reverse) unless the brake pedal is depressed.
To shift the transmission from P (Park) or N (Neutral) into R (Reverse):
1. Depress and hold the brake pedal.
2. Start the engine or turn the ignition switch to the ON position.
3. Move the shift lever.

If the brake pedal is repeatedly depressed and released with the shift lever in the P (Park) position, a chattering noise near the shift lever may be heard. This is a normal condition.

⚠️ WARNING
Always fully depress the brake pedal before and while shifting out of the P (Park) position into another position to avoid inadvertent motion of the vehicle which could injure persons in or around the car.
Driving your vehicle

Shift-lock override
If the shift lever cannot be moved from the P (Park) position into R (Reverse) position with the brake pedal depressed, continue depressing the brake, then do the following:
1. Carefully remove the cap covering the shift-lock override access hole.
2. Insert a screwdriver into the access hole and press down on the screwdriver.
3. Move the shift lever.
4. Have your vehicle inspected by an authorized Kia dealer immediately.

Ignition key interlock system (if equipped)
The ignition key cannot be removed unless the shift lever is in the P (Park) position.

Parking
Always come to a complete stop and continue to depress the brake pedal. Move the shift lever into the P (Park) position, apply the parking brake, and place the ignition switch in the LOCK/OFF position. Take the Key with you when exiting the vehicle.

WARNING
When you stay in the vehicle with the engine running, be careful not to depress the accelerator pedal for a long period of time. The engine or exhaust system may overheat and start a fire.

The exhaust gas and the exhaust system are very hot. Keep away from the exhaust system components.
Do not stop or park over flammable materials, such as dry grass, paper or leaves. They may ignite and cause a fire.
Good driving practices

• Never move the shift lever from P (Park) or N (Neutral) to any other position with the accelerator pedal depressed.

• Never move the shift lever into P (Park) when the vehicle is in motion.

• Be sure the car is completely stopped before you attempt to shift into R (Reverse) or D (Drive).

• Never take the car out of gear and coast down a hill. This may be extremely hazardous. Always leave the car in gear when moving.

• Do not "ride" the brakes. This can cause them to overheat and malfunction. Instead, when you are driving down a long hill, slow down and shift to a lower gear. When you do this, engine braking will help slow the car.

• Slow down before shifting to a lower gear. Otherwise, the lower gear may not be engaged.

• Always use the parking brake. Do not depend on placing the transmission in P (Park) to keep the car from moving.

• Exercise extreme caution when driving on a slippery surface. Be especially careful when braking, accelerating or shifting gears. On a slippery surface, an abrupt change in vehicle speed can cause the drive wheels to lose traction and the vehicle to go out of control.

• Optimum vehicle performance and economy is obtained by smoothly depressing and releasing the accelerator pedal.

⚠️ WARNING
To reduce the risk of SERIOUS INJURY or DEATH:

• ALWAYS wear your seatbelt. In a collision, an unbelted occupant is significantly more likely to be seriously injured or killed than a properly belted occupant.

• Avoid high speeds when cornering or turning.

• Do not make quick steering wheel movements, such as sharp lane changes or fast, sharp turns.

• The risk of rollover is greatly increased if you lose control of your vehicle at highway speeds.

• Loss of control often occurs if two or more wheels drop off the roadway and the driver over steers to reenter the roadway.

(Continued)
Driving your vehicle

(Continued)

- In the event your vehicle leaves the roadway, do not steer sharply. Instead, slow down before pulling back into the travel lanes.
- Kia recommends you follow all posted speed limits.

**WARNING**

If your vehicle becomes stuck in snow, mud, sand, etc., then you may attempt to rock the vehicle free by moving it forward and backward. Do not attempt this procedure if people or objects are anywhere near the vehicle. During the rocking operation the vehicle may suddenly move forward or backward as it becomes unstuck, causing injury or damage to nearby people or objects.

---

**Kickdown Mechanism (if equipped)**

Use the kickdown mechanism for maximum acceleration. Depress the accelerator pedal beyond the pressure point. The transmission will shift to a lower gear depending on the engine speed.

**Moving up a steep grade from a standing start**

To move up a steep grade from a standing start, depress the brake pedal, shift the shift lever to D(Drive). Select the appropriate gear depending on load weight and steepness of the grade, and release the parking brake. Depress the accelerator gradually while releasing the brake pedal.

---
BRAKE SYSTEM

Power brakes

Your vehicle has power-assisted brakes that adjust automatically through normal usage.

In the event that the power-assisted brakes lose power because of a stalled engine or some other reason, you can still stop your vehicle by applying greater force to the brake pedal than you normally would. The stopping distance, however, will be longer.

When the engine is not running, the reserve brake power is partially depleted each time the brake pedal is applied. Do not pump the brake pedal when the power assist has been interrupted.

Pump the brake pedal only when necessary to maintain steering control on slippery surfaces.

WARNING - Steep hill braking

Avoid continuous application of the brakes when descending a long or steep hill by shifting to a lower gear. Continuous brake application will cause the brakes to overheat and could result in a temporary loss of braking performance.

CAUTION - Brake Pedal

Do not drive with your foot resting on the brake pedal. This will create abnormally high brake temperatures which can cause excessive brake lining and pad wear.

Wet brakes may impair the vehicle’s ability to safely slow down; the vehicle may also pull to one side when the brakes are applied. Applying the brakes lightly will indicate whether they have been affected in this way. Always test your brakes in this fashion after driving through deep water. To dry the brakes, apply them lightly while maintaining a safe forward speed until brake performance returns to normal.
Driving your vehicle

**In the event of brake failure**
If service brakes fail to operate while the vehicle is in motion, you can make an emergency stop with the parking brake. The stopping distance, however, will be much greater than normal.

**Disc brakes wear indicator**
When your brake pads are worn and new pads are required, you will hear a high-pitched warning sound from your front brakes or rear brakes. You may hear this sound come and go or it may occur whenever you depress the brake pedal.

Please remember that some driving conditions or climates may cause a brake squeal when you first apply (or lightly apply) the brakes. This is normal and does not indicate a problem with your brakes.

Always replace the front or rear brake pads as pairs.

**WARNING - Parking brake**
Applying the parking brake while the vehicle is moving at normal speeds can cause a sudden loss of control of the vehicle. If you must use the parking brake to stop the vehicle, use great caution in applying the brake.

**WARNING - Brake wear**
Do not ignore high pitched whining sounds from your brakes. If you ignore this audible warning, you will eventually lose braking performance, which could lead to a serious accident.

**CAUTION - Parking brake**
Driving with the parking brake applied will cause excessive brake pad (or lining) and brake rotor wear.
Driving your vehicle

Parking brake - Hand type

**Applying the parking brake**

To engage the parking brake, first apply the foot brake and then without pressing the release button in, pull the parking brake lever up as far as possible.

In addition it is recommended that when parking the vehicle on a gradient, the shift lever should be positioned in the appropriate low gear on manual transaxle vehicles or in the P (Park) position for automatic transaxle vehicles.

**CAUTION - Parking brake**

*Driving with the parking brake applied will cause excessive brake pad and brake rotor wear.*

**Releasing the parking brake**

To release the parking brake, first apply the foot brake and pull up the parking brake lever slightly. Secondly press the release button (1) and lower the parking brake lever (2) while holding the button.
Driving your vehicle

⚠️ WARNING - Parking Brake Use

- Never allow a passenger to touch the parking brake. If the parking brake is released unintentionally, serious injury may occur.
- All vehicles should always have the parking brake fully engaged when parked to avoid inadvertent movement of the car which can injure occupants or pedestrians.

Check the brake warning light by turning the ignition switch ON (do not start the engine). This light will be illuminated when the parking brake is applied with the ignition switch in the START or ON position.

Before driving, be sure the parking brake is fully released and the brake warning light is off.

If the brake warning light remains on after the parking brake is released while the engine is running, there may be a malfunction in the brake system. Immediate attention is necessary.

If at all possible, cease driving the vehicle immediately. If that is not possible, use extreme caution while operating the vehicle and only continue to drive the vehicle until you can reach a safe location or repair shop.
Driving your vehicle

Anti-lock brake system (ABS)

ABS (or ESC) will not prevent accidents due to improper or dangerous driving maneuvers. Even though vehicle control is improved during emergency braking, always maintain a safe distance between you and objects ahead. Vehicle speeds should always be reduced during extreme road conditions. The vehicle should be driven at reduced speeds in the following circumstances:

- When driving on rough, gravel or snow-covered roads
- When driving with tire chains installed
- When driving on roads where the road surface is pitted or has different surface heights.

Driving in these conditions increase the stopping distance for your vehicle.

The ABS continuously senses the speed of the wheels. If the wheels are going to lock, the ABS system repeatedly modulates the hydraulic brake pressure to the wheels.

When you apply your brakes under conditions which may lock the wheels, you may hear a “tik-tik” sound from the brakes, or feel a corresponding sensation in the brake pedal. This is normal and it means your ABS is active.

In order to obtain the maximum benefit from your ABS in an emergency situation, do not attempt to modulate your brake pressure and do not try to pump your brakes. Press your brake pedal as hard as possible to allow the ABS to control the force being delivered to the brakes.

**NOTICE**

A click sound may be heard in the engine compartment when the vehicle begins to move after the engine is started. These conditions are normal and indicate that the anti-lock brake system is functioning properly.

- Even with the anti-lock brake system, your vehicle still requires sufficient stopping distance. Always maintain a safe distance from the vehicle in front of you.
- Always slow down when cornering. The anti-lock brake system cannot prevent accidents resulting from excessive speeds.
- On loose or uneven road surfaces, operation of the anti-lock brake system may result in a longer stopping distance than for vehicles equipped with a conventional brake system.
Driving your vehicle

The ABS warning light will stay on for approximately 3 seconds after the ignition switch is ON. During that time, the ABS will go through self-diagnosis and the light will go off if everything is normal. If the light stays on, you may have a problem with your ABS. Contact an authorized Kia dealer as soon as possible.

• When you drive on a road having poor traction, such as an icy road, and have operated your brakes continuously, the ABS will be active continuously and the ABS warning light may illuminate. Pull your vehicle over to a safe place and stop the engine.
• Restart the engine. If the ABS warning light goes off, then your ABS system is normal. Otherwise, you may have a problem with the ABS. Contact an authorized Kia dealer as soon as possible.

*NOTICE*
When you jump start your vehicle because of a drained battery, the engine may not run as smoothly and the ABS warning light may turn on at the same time. This happens because of low battery voltage. It does not mean your ABS has malfunctioned.
• Do not pump your brakes!
• Have the battery recharged before driving the vehicle.
Electronic stability control (ESC)

The Electronic Stability control (ESC) system is designed to stabilize the vehicle during cornering maneuvers. ESC checks where you are steering and where the vehicle is actually going. ESC applies the brakes on individual wheels and intervenes with the engine management system to stabilize the vehicle.

Electronic stability control (ESC) will not prevent accidents. Excessive speed in turns, abrupt maneuvers and hydroplaning on wet surfaces can still result in serious accidents. Only a safe and attentive driver can prevent accidents by avoiding maneuvers that cause the vehicle to lose traction. Even with ESC installed, always follow all the normal precautions for driving - including driving at safe speeds for the conditions.

The Electronic Stability Control (ESC) system is an electronic system designed to help the driver maintain vehicle control under adverse conditions. It is not a substitute for safe driving practices. Factors including speed, road conditions and driver steering input can all affect whether ESC will be effective in preventing a loss of control. It is still your responsibility to drive and corner at reasonable speeds and to leave a sufficient margin of safety.

When you apply your brakes under conditions which may lock the wheels, you may hear a “tik-tik” sound from the brakes, or feel a corresponding sensation in the brake pedal. This is normal and it means your ESC is active.

**NOTICE**
A click sound may be heard in the engine compartment when the vehicle begins to move after the engine is started. These conditions are normal and indicate that the Electronic Stability Control System is functioning properly.

**NOTICE**
For maximum protection, always wear your seat belt. No system, no matter how advanced, can compensate for all driver error and/or driving conditions. Always drive responsibly.
Driving your vehicle

ESC operation
ESC ON condition
- • When the ignition is turned ON, ESC and ESC OFF indicator lights illuminate for approximately 3 seconds, then ESC is turned on.
- • Press the ESC OFF button for at least half a second after turning the ignition ON to turn ESC off. (ESC OFF indicator will illuminate). To turn the ESC on, press the ESC OFF button (ESC OFF indicator light will go off).
- • When starting the engine, you may hear a slight ticking sound. This is the ESC performing an automatic system self-check and does not indicate a problem.

When operating
When the ESC is in operation, the ESC indicator light blinks.
- • When the Electronic Stability Control is operating properly, you can feel a slight pulsation in the vehicle. This is only the effect of brake control and indicates nothing unusual.
- • When moving out of the mud or driving on a slippery road, pressing the accelerator pedal may not cause the engine rpm (revolutions per minute) to increase.

ESC operation off
ESC OFF state
This car has 2 kinds of ESC off states.
If the engine stops when ESC is off, ESC remains off. Upon restarting the engine, the ESC will automatically turn on again.
• ESC off state 1
To cancel ESC operation, press the ESC OFF button (ESC OFF ) shortly (ESC OFF indicator light (ESC OFF ) illuminates). At this state, the engine control function does not operate. It means the traction control function does not operate. Brake control function only operates.
The message (“Traction Control disabled”) will appear on the LCD display.

• ESC off state 2
To cancel ESC operation, press the ESC OFF button (ESC OFF ) for more than 3 seconds. ESC OFF indicator light (ESC OFF ) illuminates and ESC OFF warning chime will sound. At this state, the engine control function and brake control function do not operate. It means the car stability control function does not operate any more.
The message (“Traction & Stability Control disabled”) will appear on the LCD display.

Indicator light

When ignition switch is turned to ON, the indicator light illuminates, then goes off if the ESC system is operating normally.
The ESC indicator light blinks whenever ESC is operating or illuminates when ESC fails to operate.
The ESC OFF indicator light comes on when the ESC is turned off with the button.
Driving your vehicle

**CAUTION**

Driving with varying tire or wheel sizes may cause the ESC system to malfunction. When replacing tires, make sure they are the same size as your original tires.

**NOTICE**

• When operating the vehicle on a dynamometer, ensure that the ESC is turned off (ESC OFF light illuminated). If the ESC is left on, it may prevent the vehicle speed from increasing, and result in false diagnosis.
• Turning the ESC off does not affect ABS or brake system operation.

**WARNING - Operating ESC**

Never press the ESC OFF button while ESC is operating (ESC indicator light blinks).
If ESC is turned off while ESC is operating, the vehicle may slip out of control.

**WARNING - Electronic stability control**

Drive carefully even though your vehicle has Electronic Stability Control. It can only assist you in maintaining control under certain circumstances.

**ESC OFF usage**

When driving
• ESC should be turned on for daily driving whenever possible.
• To turn ESC off while driving, press the ESC OFF button while driving on a flat road surface.
Vehicle stability management (VSM)
This system provides further enhancements to vehicle stability and steering responses when a vehicle is driving on a slippery road or a vehicle detects changes in coefficient of friction between right wheels and left wheels when braking.

VSM operation
When the VSM is in operation, ESC indicator light (👍) blinks.
When the vehicle stability management is operating properly, you can feel a slight pulsation in the vehicle and/or abnormal steering responses (EPS). This is only the effect of brake and EPS control and indicates nothing unusual.

The VSM does not operate when:
• Driving on bank road such as gradient or incline
• Driving in reverse
• ESC OFF indicator light (👍) remains on the instrument cluster
• EPS indicator light remains on the instrument cluster

VSM operation off
If you press the ESC OFF button to turn off the ESC, the VSM will also cancel and the ESC OFF indicator light (👍) illuminates. To turn on the VSM, press the button again. The ESC OFF indicator light goes out.

Malfunction indicator
The VSM can be deactivated even if you don’t cancel the VSM operation by pressing the ESC OFF button. It indicates that a malfunction has been detected somewhere in the Electric Power Steering system or VSM system. If the ESC indicator light (👍) or EPS warning light remains on, take your vehicle to an authorized Kia dealer and have the system checked.

✽ NOTICE
• The VSM is designed to function above approximately 13 mph (22 km/h) on curves.
• The VSM is designed to function above approximately 6 mph (10 km/h) when a vehicle is braking on a split-mu road. The split-mu road is made of surfaces which have different friction forces.
Driving your vehicle

- The Vehicle Stability Management system is not a substitute for safe driving practices but a supplementary function only. It is the responsibility of the driver to always check the speed and the distance to the vehicle ahead. Always hold the steering wheel firmly while driving.
- Your vehicle is designed to activate according to the driver's intention, even with installed VSM. Always follow all the normal precautions for driving at safe speeds for the conditions – including driving in clement weather and on a slippery road.

Hill-start assist control (HAC)
A vehicle has the tendency to roll back on a steep hill when it starts to go after stopping. The Hill-start Assist Control (HAC) prevents the vehicle from rolling back by applying the brakes automatically for about 2 seconds. The brakes are released when the accelerator pedal is depressed or after about 2 seconds. The HAC is activated only for about 2 seconds, so when the vehicle is starting off always depress the accelerator pedal.

Good braking practices
- Check to be sure the parking brake is not engaged and the parking brake indicator light is out before driving away.
- Driving through water may get the brakes wet. They can also get wet when the vehicle is washed. Wet brakes can be dangerous! Your vehicle will not stop as quickly if the brakes are wet. Wet brakes may cause the vehicle to pull to one side.

To dry the brakes, apply the brakes lightly until the braking action returns to normal, taking care to keep the vehicle under control at all times. If the braking action does not return to normal, stop as soon as it is safe to do so and call an authorized Kia dealer for assistance.

WARNING - Maintaining Brake Pressure on Incline
HAC does not replace the need to apply brakes while stopped on an incline. While stopped, make sure you maintain brake pressure sufficient to prevent your vehicle from rolling backward and causing an accident. Don’t release the brake pedal until you are ready to accelerate forward.

Good braking practices
- Check to be sure the parking brake is not engaged and the parking brake indicator light is out before driving away.
- Driving through water may get the brakes wet. They can also get wet when the vehicle is washed. Wet brakes can be dangerous! Your vehicle will not stop as quickly if the brakes are wet. Wet brakes may cause the vehicle to pull to one side.

To dry the brakes, apply the brakes lightly until the braking action returns to normal, taking care to keep the vehicle under control at all times. If the braking action does not return to normal, stop as soon as it is safe to do so and call an authorized Kia dealer for assistance.

WARNING - Maintaining Brake Pressure on Incline
HAC does not replace the need to apply brakes while stopped on an incline. While stopped, make sure you maintain brake pressure sufficient to prevent your vehicle from rolling backward and causing an accident. Don’t release the brake pedal until you are ready to accelerate forward.
• Don't coast down hills with the vehicle out of gear. This is extremely hazardous. Keep the vehicle in gear at all times, use the brakes to slow down, then shift to a lower gear so that engine braking will help you maintain a safe speed.

• Don't "ride" the brake pedal. Resting your foot on the brake pedal while driving can be dangerous because the brakes might overheat and lose their effectiveness. It also increases the wear of the brake components.

• If a tire goes flat while you are driving, apply the brakes gently and keep the vehicle pointed straight ahead while you slow down. When you are moving slowly enough for it to be safe to do so, pull off the road and stop in a safe place.

• If your vehicle is equipped with an automatic transaxle, don't let your vehicle creep forward. To avoid creeping forward, keep your foot firmly on the brake pedal when the vehicle is stopped.

• Be cautious when parking on a hill. Firmly engage the parking brake and place the shift lever in P (automatic transaxle) or in first or reverse gear (manual transaxle). If your vehicle is facing downhill, turn the front wheels into the curb to help keep the vehicle from rolling. If your vehicle is facing uphill, turn the front wheels away from the curb to help keep the vehicle from rolling. If there is no curb or if it is required by other conditions to keep the vehicle from rolling, block the wheels.

• Under some conditions your parking brake can freeze in the engaged position. This is most likely to happen when there is an accumulation of snow or ice around or near the rear brakes or if the brakes are wet. If there is a risk that the parking brake may freeze, apply it only temporarily while you put the shift lever in P (automatic transaxle) or in first or reverse gear (manual transaxle) and block the rear wheels so the vehicle cannot roll. Then release the parking brake.

• Do not hold the vehicle on the incline with the accelerator pedal. This can cause the transaxle to overheat. Always use the brake pedal or parking brake.
Driving your vehicle

AUTONOMOUS EMERGENCY BRAKING (AEB) (IF EQUIPPED)

The AEB system is designed to potentially reduce accident risk. It recognizes the distance from the vehicle ahead or a pedestrian through the sensors (i.e. radar and camera), and, if necessary, warns the driver of a collision risk with a warning message or warning alarms.

WARNING
- Autonomous Emergency Braking (AEB) Limitations

The AEB system is a supplemental system and is not a substitute for safe driving practices. It is still the responsibility of the driver to ensure it is safe to use the AEB based on the speed of traffic and the distance to the nearest vehicle ahead of the driver.

WARNING
Take the following precautions when using the Autonomous Emergency Braking (AEB):
- This system is only a supplemental system and it is not intended to, nor does it replace the need for extreme care and attention of the driver. The sensing range and objects detectable by the sensors are limited. Pay attention to the road conditions at all times.
- NEVER drive too fast in accordance with the road conditions or while cornering.
- Always drive cautiously to prevent unexpected and sudden situations from occurring. AEB does not stop the vehicle completely and does not avoid collisions.

System setting and activation

System setting
The driver can activate the AEB by placing the engine start/stop button to the ON position and by selecting 'User Settings', 'Driving Assist', and 'Autonomous Emergency Braking System'. The AEB deactivates, when the driver cancels the system setting.
Driving your vehicle

The warning light illuminates on the LCD display, when you cancel the AEB system. The driver can monitor the AEB ON/OFF status on the LCD display. Also, the warning light illuminates when the ESC (Electronic Stability Control) is tuned off (Traction & Stability Control disabled.) When the warning light remains ON with the AEB activated, have your vehicle inspected by an authorized Kia dealer.

The driver can select the initial warning activation time in the User Settings in the instrument cluster LCD display. The options for the initial Forward Collision Warning include the following:

- **EARLY** - When this condition is selected, the initial Forward Collision Warning is activated earlier than normal. This setting maximizes the amount of distance between the vehicle or pedestrian ahead before the initial warning occurs.

- **NORMAL** - When this condition is selected, the initial Forward Collision Warning is activated normally. This setting allows for a smaller amount of distance between the vehicle or pedestrian ahead before the initial warning occurs than EARLY mode.

- **LATE** - When this condition is selected, the initial Forward Collision Warning is activated later than normal. This setting reduces the amount of distance between the vehicle or pedestrian ahead before the initial warning occurs. The driver can use it when the traffic is not busy on the road and driving speed is lower.
Prerequisite for activation
The AEB will activate when the AEB is selected on the LCD display, and when the following prerequisites are satisfied:

- The ESC (Electronic Stability Control) is activated.
- The driving speed is over 6 mph (10 km/h). (The AEB only works within a certain range of vehicle speeds)
- When the AEB recognizes a vehicle or the pedestrian in front. (The AEB may not recognize every obstacle or provide warnings and braking in every situation, so do not rely on the AEB to stop the vehicle in instances where the driver sees an obstacle and has the ability to apply the brakes)

WARNING
Set or cancel AEB with the controlling switches on the steering wheel only when the vehicle is stopped. Do not attempt to set or cancel the AEB while your vehicle is moving.

- The AEB automatically activates when you turn the vehicle on.
- The driver can deactivate the AEB by canceling the in the system setting on the LCD display.
- The AEB automatically deactivates when canceling ESC. When the ESC is canceled, the AEB cannot be activated on the LCD display.

AEB warning message and system control
The AEB produces warning messages, warning alarms, and emergency braking based on the level of risk of a frontal collision, such as when a vehicle ahead suddenly brakes or when it detects a collision with a pedestrian is imminent.
Driving your vehicle

**Forward Warning (1st warning)**

The warning message appears on the LCD display with the warning alarms.

**Collision Warning (2nd warning)**

- The warning message appears on the LCD display with the warning alarms.
- The AEB applies the brakes within certain limit to reduce the impact from a collision.

**Emergency braking (3rd warning)**

- The warning message appears on the LCD display with the warning alarms.
- The AEB controls the brakes within certain limit to reduce the impact from the collision.
- The AEB controls the maximum brakes just before the collision.
Brake operation

- In an urgent situation, the braking system enters into the ready status for prompt reaction against the driver's depressing the brake pedal.
- The AEB provides additional braking power for optimum braking performance, when the driver depresses the brake pedal.
- The braking control is automatically deactivated, when the driver sharply depresses the brake pedal, or when the driver abruptly turns the steering wheel.
- The braking control is automatically canceled, when risk factors disappear.

The driver should always exercise caution when operating the vehicle, even though there is no warning message or warning alarm.

⚠️ WARNING
The AEB cannot avoid all collisions. The AEB might not completely stop the vehicle before collision, due to ambient weather and road conditions. The driver has the responsibility to drive safely and control the vehicle.

⚠️ NOTICE
The AEB system logic operates within certain parameters, such as the distance from the vehicle or pedestrian ahead, the speed of the vehicle ahead, and the driver's vehicle speed. Certain conditions such as inclement weather and road conditions may affect the operation of the AEB system.

⚠️ WARNING
Never deliberately drive dangerously to activate the system as such conduct increases the risk of an accident.

⚠️ NOTICE
The AEB operates in accordance with the risk levels, such as the distance from the vehicle/passenger in front, the speed of the vehicle/passenger in front, and the driver's vehicle operation.
Driving your vehicle

Sensor to detect the distance from the vehicle in front (front radar)

The sensor detects the distance to the vehicle in front. However, a foreign substances on the sensor lens, such as snow and rain, may adversely affect the sensing performance. It may even temporarily cancel the AEB. Always keep the sensor lens clean.

- Do not apply license plate molding or foreign objects such as a bumper sticker or a bumper guard near the radar sensor. Doing so may adversely affect the sensing performance of the radar.
- Always keep the radar sensor and cover clean and free of dirt and debris.
- Use only a soft cloth to wash the vehicle. Do not spray pressurized water directly on the sensor or sensor cover.
- Be careful not to apply unnecessary force on the radar sensor or sensor cover. If the sensor is forcibly moved out of proper alignment, the AEB system may not operate correctly. In this case, a warning message may not be displayed. Have the vehicle inspected by an authorized Kia dealer.
- If the front bumper becomes damaged in the area around the radar sensor, the AEB system may not operate properly. Have the vehicle inspected by an authorized Kia dealer.

- Use only genuine Kia parts to repair or replace a damaged sensor or sensor cover. Do not apply paint to the sensor cover.
- NEVER install any accessories or stickers on the front windshield, nor tint the front windshield.
- NEVER locate any reflective objects (i.e. white paper, mirror) over the dashboard. Any light reflection may cause a malfunction of the system.
- Pay extreme caution to keep the camera out of water.
- NEVER disassemble the camera assembly, nor apply any impact on the camera assembly.
- Playing the vehicle audio system at high volume may offset the system warning sounds.
Driving your vehicle

**Warning message and warning light**

When the sensor is covered or the sensor lens is dirty with foreign substances, such as snow or rain, the AEB operation may temporarily stop. In this case, a warning message will appear to notify the driver.

This is not a malfunction with the AEB. To operate the AEB again, remove the foreign substances.

**NOTICE**

- Do not install any accessories, such as a license plate bracket or bumper sticker near the sensor area. Do not replace the bumper by yourself. Doing so may adversely affect the sensing performance.
- Always keep the sensor/bumper area clean.
- Use only a soft cloth to wash the vehicle. Also, do not spray highly pressurized water on the sensor installed on the bumper.
- Be careful not to apply unnecessary force on the frontal sensor area. When the sensor moves out of the correct position due to external force, the system may not operate correctly even without the warning light or message. In this case, have your vehicle inspected by an authorized Kia dealer.
- Use only the genuine Kia sensor cover. Do not arbitrarily apply paint on the sensor cover.

**System malfunction**

- When the AEB is not working properly, the AEB warning light ( ) will illuminate and the warning message will appear for a few seconds. After the message disappears, the master warning light ( ) will illuminate. In this case, have your vehicle inspected by an authorized Kia dealer.
- The AEB warning message may appear along with the illumination of the ESC warning light.
\textbf{NOTICE}

In certain instances and under certain driving conditions, the AEB system may activate prematurely. This initial warning message appears on the LCD display with a warning chime. Also, in certain instances the front radar sensor or camera recognition system may not detect the vehicle or pedestrian ahead. The AEB system may not activate and the warning message will not be displayed.

\textbf{NOTICE}

- If there is a malfunction with the AEB system, the automatic emergency braking is not applied even though it is operating normally.
- The AEB system may not activate if the driver applies the brake pedal to avoid a collision.
Driving your vehicle

- The brake control may be insufficient, possibly causing a collision, if a vehicle in front abruptly stops. Always pay extreme caution.
- Occupants may get injured, if the vehicle abruptly stops by the activated AEB system. Pay extreme caution.
- The AEB system operates only to detect vehicles or pedestrians in front of the vehicle.
- The AEB system does not operate when the vehicle is in reverse.
- The AEB system is not designed to detect other objects on the road such as animals.
- The AEB system does not detect vehicles in the opposite lane.
- The AEB system does not detect cross traffic vehicles that are approaching.

**Limitations of the system**

The Automatic Emergency Braking (AEB) system is designed to monitor the vehicle ahead or a pedestrian on the roadway through radar signals and camera recognition to warn the driver that a collision is imminent, and if necessary, apply emergency braking.

In certain situations, the radar sensor or the camera may not be able to detect the vehicle or pedestrian ahead. In these cases, the AEB system may not operate. The driver must pay careful attention in the following situations where the AEB operation may be limited.

**Recognizing vehicles**

The sensor may be limited when:
- The radar sensor or camera is blocked with a foreign object or debris
- Inclement weather such as heavy rain or snow obscures the field of view of the radar sensor or camera
- There is interference by electromagnetic waves
- There is severe irregular reflection from the radar sensor
- The radar/camera sensor recognition is limited
- The vehicle in front is too small to be detected (for example a motorcycle or a bicycle, etc.)
- The camera cannot fit the full outline of a vehicle in front
- The vehicle in front is an oversize vehicle or trailer that is too big to be detected by the camera recognition system (for example a tractor trailer, etc.)
- The driver's field of view is not well illuminated (either too dark or too much reflection or too much backlight that obscures the field of view)
Driving your vehicle

• The vehicle in front does not have their rear lights properly turned ON
• The outside brightness changes suddenly, for example when entering or exiting a tunnel
• Light coming from a street light or an oncoming vehicle is reflected on a wet road surface such as a puddle in the road
• The field of view in front is obstructed by sun glare
• The windshield glass is fogged up; a clear view of the road is obstructed
• The vehicle in front is driving erratically
• The vehicle drives through a construction area, on an unpaved road, or above metal materials, such as a railway
• The vehicle drives inside a building, such as a basement parking lot
• The adverse road conditions cause excessive vehicle vibrations while driving
• The vehicle in front is moving vertically to the driving direction
• The vehicle in front is stopped vertically
• The vehicle in front is driving towards your vehicle or reversing
• Sensor recognition changes rapidly when driving over a bump
• When the vehicle vibrates heavily
• When the vehicle in front drives in circles, such as on a roundabout
• Window tint on the front windshield, film, water repellent coating, damaged glass, camera lens contaminated with foreign objects (e.g. a sticker, insect, etc.)
• When the radar or camera/camera lens is damaged
• When the headlights are off or weak at night or in a tunnel
• Light such as street light, sunlight or oncoming vehicle light reflects from water on the road
• Driving with the sun in front of you (including headlights of a vehicle coming from the opposite direction)
• Signs, shadow on the road, tunnel entrance, toll gate, partially paved roads
• The windshield is fogged by humid air in the vehicle or frosted over
• In foggy weather
• The radar/camera sensor recognition is limited
- Driving on a curve
The performance of the AEB system may be limited when driving on a curved road.
In certain instances on a curved road, the AEB system may activate prematurely.
The AEB (Autonomous Emergency Braking) performance decreases while driving on a curve not recognizing the vehicle in front in the same lane. It may unnecessarily produce the warning alarm or brake, or it may not produce the warning alarm or brake at all.

Also, in certain instances the front radar sensor or camera recognition system may not detect the vehicle traveling on a curved road.
In these cases, the driver must maintain a safe braking distance, and if necessary, depress the brake pedal to reduce your driving speed in order to maintain a safe distance.

The AEB system may recognize a vehicle in the next lane when driving on a curved road.
In this case, the system may apply the brake.
Always pay attention to road and driving conditions, while driving. If necessary, depress the brake pedal to reduce your driving speed in order to maintain a safe distance.
Also, when necessary depress the accelerator pedal to prevent the system from unnecessarily decelerating your vehicle.
Check the traffic conditions around the vehicle before operating the AEB (Autonomous Emergency Braking).
Driving your vehicle

- Driving on a slope
  The AEB performance decreases while driving upward or downward on a slope, not recognizing the vehicle in front in the same lane. It may unnecessarily produce the warning message and the warning alarm, or it may not produce the warning message and the warning alarm at all.
  When the AEB suddenly recognizes the vehicle in front while passing over a slope, you may experience sharp deceleration.
  Always keep your eyes forward while driving upward or downward on a slope, and, if necessary, depress the brake pedal.

- Changing lanes
  When a vehicle changes lanes in front of you, the AEB system may not immediately detect the vehicle, especially if the vehicle changes lanes abruptly. In this case, you must maintain a safe braking distance, and if necessary, depress the brake pedal to reduce your driving speed in order to maintain a safe distance.

- Changing lanes
  When driving in stop-and-go traffic, and a stopped vehicle in front of you merges out of the lane, the AEB system may not immediately detect the new vehicle that is now in front of you. In this case, you must maintain a safe braking distance, and if necessary, depress the brake pedal to reduce your driving speed in order to maintain a safe distance.
Driving your vehicle

- Recognizing the vehicle
If the vehicle in front of you has cargo that extends rearward from the cab, or when the vehicle in front of you has higher ground clearance, additional special attention is required. The AEB system may not be able to recognize the cargo extending from the vehicle. In these instances, you must maintain a safe braking distance from the rearmost object, and if necessary, depress the brake pedal to reduce your driving speed in order to maintain distance.

**Recognizing pedestrians**
The sensor may be limited when:
- The pedestrian is not fully detected by the camera recognition system, for example, if the pedestrian is leaning over or is not fully walking upright
- The pedestrian is moving very quickly or appears abruptly in the camera detection area
- The pedestrian is wearing clothing that easily blends into the background, making it difficult to be detected by the camera recognition system
- The outside lighting is too bright (e.g. when driving in bright sunlight or in sun glare) or too dark (e.g. when driving on a dark rural road at night)
- There is an item similar to a person's body structure
- The pedestrian is small
- The pedestrian has impaired mobility
- The sensor recognition is limited
- It is difficult to detect and distinguish the pedestrian from other objects in the surroundings, for example, when there is a group of pedestrians or a large crowd
- Sensor recognition changes rapidly when driving over a bump
- When the vehicle vibrates heavily
- Window tint on the front windshield, film, water repellent coating, damaged glass, camera lens contaminated with foreign objects (e.g. a sticker, insect, etc.)
- When the radar or camera/camera lens is damaged
- When the headlights are off or weak at night or in a tunnel
- Light such as street light, sunlight or oncoming vehicle light reflects from water on the road
- Driving with the sun in front of you (including headlights of a vehicle coming from the opposite direction)
- Signs, shadow on the road, tunnel entrance, toll gate, partially paved roads
Driving your vehicle

- The windshield is fogged by humid air in the vehicle or frosted over
- In foggy weather
- The radar/camera sensor recognition is limited
- Do not use the Autonomous Emergency Braking system when towing a vehicle. Application of the AEB system while towing may adversely affect the safety of your vehicle or the towing vehicle.
- Use extreme caution when the vehicle in front of you has cargo that extends rearward from the cab, or when the vehicle in front of you has higher ground clearance.
- The AEB system is designed to detect and monitor the vehicle ahead or detect a pedestrian in the roadway through radar signals and camera recognition. It is not designed to detect bicycles, motorcycles, or smaller wheeled objects such as luggage bags, shopping carts, or strollers.
- Never try to test the operation of the AEB system. Doing so may cause severe injury or death.
- Please have the system inspected by a professional workshop when replacing or reinstalling the front windshield, front bumper or radar/camera. Kia recommends to visit an authorized Kia dealer/service partner.

✽ NOTICE
In some instances, the AEB system may be cancelled when subjected to electromagnetic interference.
CRUISE CONTROL SYSTEM (IF EQUIPPED)

1. Cruise indicator
2. Cruise set indicator

The cruise control system allows you to program the vehicle to maintain a constant speed without pressing the accelerator pedal. This system is designed to function above approximately 20 mph (30 km/h).

- If the cruise control is left on (CRUISE indicator light in the instrument cluster illuminated), the cruise control can be switched on accidentally. Keep the cruise control system off (CRUISE indicator light OFF) when the cruise control is not in use, to avoid inadvertently setting a speed.
- Use the cruise control system only when traveling on open highways in good weather.
- Do not use the cruise control driving in heavy or varying traffic, or on slippery (rainy, icy or snow-covered) or winding roads or over 6% up-hill or down-hill roads.

⚠️ WARNING - Misuse of Cruise Control

Do not use cruise control if the traffic situation does not allow you to drive safely at a constant speed and with sufficient distance to the vehicle in front.

✨ NOTICE

- During normal cruise control operation, when the SET switch is activated or reactivated after applying the brakes, the cruise control will energize after approximately 3 seconds. The delay is normal.
- To activate cruise control, depress the brake pedal at least once after turning the ignition switch to the ON position or starting the engine. This is to check if the brake switch, which is an important part to canceling cruise control, is in normal condition.
Cruise control switch

CRUISE: Turns cruise control system on or off.
CANCEL: Cancels cruise control operation.
RES+: Resumes or increases cruise control speed.
SET -: Sets or decreases cruise control speed.

To set cruise control speed:

1. Press the CRUISE button on the steering wheel to turn the system on. The CRUISE indicator light in the instrument cluster will illuminate.
2. Accelerate to the desired speed, which must be more than 20 mph (30 km/h).
3. Push the SET - switch, and release it at the desired speed. The SET indicator light in the instrument cluster will illuminate. Release the accelerator pedal at the same time. The desired speed will automatically be maintained.

* NOTICE - Manual transaxle
For manual transaxle vehicles, you should depress the brake pedal at least once to set the cruise control after starting the engine.

On a steep grade, the vehicle may slow down or speed up slightly while going uphill or downhill.
To increase cruise control set speed:

Follow either of these procedures:
- Push the RES + switch and hold it. Your vehicle will accelerate. Release the lever at the speed you want.
- Push the RES + switch and release it immediately. The cruising speed will increase by 1 mph (or 2km/h) each time you move the lever up (to RES+) in this manner.

To decrease the cruising speed:

Follow either of these procedures:
- Push the SET - switch and hold it. Your vehicle will gradually slow down. Release the lever at the speed you want to maintain.
- Push the SET - switch and release it immediately. The cruising speed will decrease by 1 mph (2 km/h) each time you move the lever down (to SET-) in this manner.

To temporarily accelerate with the cruise control on:

If you want to speed up temporarily when the cruise control is on, depress the accelerator pedal. Increased speed will not interfere with cruise control operation or change the set speed.
To return to the set speed, take your foot off the accelerator.
Driving your vehicle

To cancel cruise control, do one of the following:

- Press the brake pedal.
- Depress the clutch pedal if equipped with a manual transaxle.
- Shift into N (Neutral) with an automatic transaxle.
- Push the CANCEL switch located on the steering wheel.
- Decrease the vehicle speed lower than the memory speed by approximately 12 mph (20 km/h).
- Decrease the vehicle speed to less than approximately 15 mph (25 km/h).

Each of these actions will cancel cruise control operation (the SET indicator light in the instrument cluster will go off), but it will not turn the system off. If you wish to resume cruise control operation, push the RES + switch located on your steering wheel. You will return to your previously preset speed.

To resume cruising speed at more than approximately 20 mph (30 km/h):

If any method other than the CRUISE button was used to cancel cruising speed and the system is still activated, the most recent set speed will automatically resume when the RES + switch is pushed.

It will not resume, however, if the vehicle speed has dropped below approximately 20 mph (30 km/h).
Driving your vehicle

To turn cruise control off, do one of the following:

- Press the CRUISE button (the CRUISE indicator light in the instrument cluster will go off).
- Turn the ignition off.

Both of these actions cancel cruise control operation. If you want to resume cruise control operation, repeat the steps provided in “To set cruise control speed” on the previous page.
SMART CRUISE CONTROL SYSTEM (SCC) (IF EQUIPPED)

- Use the SCC only when traveling on open highways in good weather.
- Limited visibility (rain, snow, smog, etc)
- Cruise function should not be used when the vehicle is being towed to prevent any damage.

The SCC allows you to program the vehicle to maintain a set speed so long as it is not limited by traffic. When traffic is encountered the vehicle will slow down to maintain a set distance behind traffic without depressing the accelerator or brake pedal.

⚠️ WARNING
- Smart Cruise Control Inadvertent Activation
If the smart cruise control is left on (CRUISE indicator in the instrument cluster illuminated), it can be activated inadvertently. Keep the advanced smart cruise control system off (CRUISE indicator turn off) when the smart cruise control is not in use to avoid setting a speed which the driver is not aware of.

⚠️ WARNING
The Smart Cruise Control System (SCC) is deactivated when driving under the speed of 6.0 mph (10 km/h). In this case, the SCC will be unable to maintain the distance entered by the driver. It is the driver’s responsibility to depress the brake to maintain a safe distance from the vehicle the driver is approaching.

* SCC is the abbreviation for Smart Cruise Control.
Driving your vehicle

⚠️ WARNING
- Smart Cruise Control Limitations
  • The smart cruise control is a supplemental system and is not a substitute for safe driving practices. It is the responsibility of the driver to always check the speed and distance to the vehicle ahead.
  • Do not use the smart cruise control when it may not be safe to keep the car at a constant speed. For instance.
    - Highway interchange and tollgate
    - Road surrounded by multiple steel constructions (subway construction, steel tunnel, etc)
    - Parking lot
    - Lanes beside guard rail on a road
    - Slippery road with rain, ice, or snow

(Continued)
- Abrupt curved road
- Steep hills
- Windy roads
- Off roads
- Roads under construction
- Rumble strip
- The sensing ability decreases if the level of front and rear vehicle is changed from the factory.
- When driving near crash barriers
- When driving on a sharp curve
- When driving with limited view (possibly due to bad weather, such as fog, snow, rain or sandstorm)

• Always pay attention to the road and driving conditions to prevent unexpected situations from occurring even while the SCC is operating.

(Continued)
- The smart cruise control system cannot recognize a stopped vehicle, pedestrians or an oncoming vehicle. Always look ahead cautiously to prevent unexpected and sudden situations from occurring.
- Use the smart cruise control system only when traveling on open highways in good weather conditions.

(Continued)
Driving your vehicle

Speed setting (SCC)
To set cruise control speed:

1. Press the CRUISE button, to turn the system on. The CRUISE indicator in the instrument cluster will illuminate.
2. Accelerate to the desired speed.
   - 20 mph (30 km/h) ~ 110 mph (180 km/h) : when there is no vehicle in front
   - 6 mph (10 km/h) ~ 110 mph (180 km/h) : when there is a vehicle in front
3. Move the lever down (to SET-), and release it at the desired speed. The set speed and vehicle to vehicle distance on the LDC screen will illuminate.
4. Release the accelerator pedal. The desired speed will automatically be maintained.
   - If there is a vehicle in front of you, the speed may decrease to maintain the distance to the vehicle ahead.
   - On a steep grade, the vehicle may slow down or speed up slightly while going uphill or downhill.

To increase cruise control set speed:

Follow either of these procedures:
- Move the lever up (to RES+), and hold it. Your vehicle set speed will increase by 5 mph (10 km/h). Release the lever at the speed you want.
- Move the lever up (to RES+), and release it immediately. The cruising speed will increase by 1 mph (1.0 km/h) each time you move the lever up (to RES+) in this manner.
- SCC will operate to a maximum setting of 110 mph (180 km/h). However all local speed limit laws must be followed.
Driving your vehicle

* NOTICE
When vehicle speed is under 10 km/h (6 mph), the Smart Cruise Control is canceled. The driver must adjust the vehicle speed by depressing the accelerator or brake pedal according to the road condition ahead and driving condition.

To decrease the cruise control set speed:

Follow either of these procedures:

- Move the lever down (to SET -), and hold it. Your vehicle set speed will decrease by 5 mph (10 km/h). Release the lever at the speed you want.
- Move the lever down (to SET -), and release it immediately. The cruising speed will decrease by 1 mph (1.0 km/h) each time you move the lever down (to SET-) in this manner.
- You can set the cruise control to any speed above 20 mph (30 km/h).

To temporarily accelerate with the cruise control on:

If you want to speed up temporarily when the cruise control is on, depress the accelerator pedal. Increased speed will not interfere with cruise control operation or change the set speed. To return to the set speed, take your foot off the accelerator. If you move the lever down (to SET-) at increased speed, the cruising speed will be set again.

* NOTICE
Be careful when accelerating temporarily, because the speed is not regulated automatically at this time even if there is a vehicle in front of you.
**SCC will be temporarily canceled when:**

**Cancelled manually**
The smart cruise control is temporarily canceled when the brake pedal is depressed or the CANCEL button is pressed. The speed and vehicle to vehicle distance indicator on the cluster will disappear and the CRUISE indicator is illuminated continuously.

**Cancelled automatically**
- The driver's door is opened.
- The vehicle is shifted to N (Neutral), R (Reverse) or P (Park).
- The EPB (Electronic Parking Brake) is applied.
- The vehicle speed is over 120 mph (190 km/h).
- The vehicle stops on a steep incline.
- The ESC (Electronic Stability Control), TCS (Traction Control System) or ABS is operating.
- The ESC is turned off.
- The sensor or the cover is dirty or blocked with foreign matter.
- The vehicle is stopped for a certain period of time.
- The vehicle stops and goes repeatedly for a long period of time.
- The accelerator pedal is continuously depressed for a long period of time.
- The engine performance is abnormal.
- The driver starts driving by pushing the switch up (RES+)/down (SET-) or depressing the accelerator pedal, after stopping the vehicle by the Smart Cruise Control System with no other vehicle ahead.
- When the AEB (Autonomous Emergency Braking) is operating
- When the engine speed is in dangerous range
- The driver starts driving by pushing the switch up (RES+)/down (SET-) or depressing the accelerator pedal, after stopping the vehicle with a vehicle stopped far away in front.
- The AEB is activated.

Each of these actions will cancel the Smart Cruise Control operation. The Set Speed and Vehicle-to-Vehicle Distance on the LCD display will go off.
Driving your vehicle

In a condition the Smart Cruise Control is cancelled automatically, the Smart Cruise Control will not resume even though the RES+ or SET- switch is pushed.

✽ NOTICE
If the system is automatically cancelled, the warning chime will sound and a message (“Smart Cruise Control canceled”) will appear for a few seconds. You must adjust the vehicle speed by depressing the accelerator or brake pedal according to the road conditions ahead and driving condition. Always check the road conditions. Do not rely on the warning chime.

To resume cruise control set speed:

If any method other than the CRUISE button was used to cancel cruising speed and the system is still activated, the cruising speed will automatically resume when you move the lever up/down (to RES+ or SET-).
If you move the lever up (to RES+), the speed will resume to the recently set speed. When the speed of the vehicle is greater than or equal to 6 mph (10 km/h) but less than 20 mph (30 km/h), the smart cruise control system will be reset only when there is a vehicle in front.

⚠️ WARNING - Following Distance
• To avoid collisions, always be aware of the selected speed and vehicle to vehicle distance settings when activating your smart cruise control system.
• Always maintain sufficient braking distance and decelerate your vehicle by applying the brakes if necessary.
Driving your vehicle

To turn cruise control off:
Press the CRUISE button. (the CRUISE indicator in the instrument cluster will go off).

Vehicle to vehicle distance setting (SCC)

To set vehicle to vehicle distance:
This function allows you to program the vehicle to maintain relative distance to the vehicle ahead without depressing the accelerator pedal or brake pedal.

The vehicle to vehicle distance will automatically activate when the SCC is on.
Select the appropriate distance according to road conditions and vehicle speed.

Each time the button is pressed, the vehicle to vehicle distance changes as follows:
Distance 4 → Distance 3 → Distance 2 → Distance 1 → Distance 4

OPS053017

OPS056121N
Driving your vehicle

For example, if you drive at 56 mph (90 km/h), the distance is maintained as follows;

Distance 4 - approximately 172 feet (52.5 m)
Distance 3 - approximately 130 feet (40 m)
Distance 2 - approximately 106 feet (32.5 m)
Distance 1 - approximately 82 feet (25 m)

* NOTICE
The smart cruise control system remember the last vehicle to vehicle distance which the driver used in the vehicle with AEB.
• The vehicle will maintain the set speed, when the lane ahead is clear.
• The vehicle will slow down or speed up within selected speed to maintain the selected distance, when there is a vehicle ahead of you in the lane. (A vehicle will appear in front of your vehicle in the LCD display only when there is an actual vehicle in front of you)
• If the vehicle ahead speeds up, your vehicle will travel at a steady cruising speed after accelerating to the selected speed.
• The warning chime sounds and LCD display blinks if it is hard to maintain the selected distance to the vehicle ahead.
• If the warning chime sounds, actively adjust the vehicle speed by depressing the brake pedal according to the road condition ahead and driving condition.
• Even if the warning chime is not activated, always pay attention to the driving conditions to prevent dangerous situations from occurring.

Radar to detect distance to the vehicle ahead

The sensor detects distance to the vehicle ahead. If the sensor is covered with dirt or other foreign matter, the vehicle to vehicle distance control may not operate correctly. Always keep the sensor clean.
Driving your vehicle

Radar check message
If the radar or cover is dirty or obscured with foreign matter such as snow, this message (“Smart Cruise Control disabled temporarily”) will appear and it will disappear after for a while. In this case, the system may not function temporarily, but it does not indicate a malfunction of the Smart Cruise Control System. Clean the radar or cover by using a soft cloth and it will operate normally.

SCC (Smart Cruise Control) malfunction message
The message (“Check Smart Cruise Control System”) will appear when the vehicle to vehicle distance control system is not functioning normally. Take your vehicle to an authorized Kia dealer and have the system checked.

- Always keep the sensor and bumper clean.
- Use only a genuine Kia sensor cover for your vehicle.
- Do not install accessories around the sensor and do not replace the bumper by yourself. It may interfere with the sensor performance.
- Impact damage to the sensor or sensor area may cause the sensor to move slightly off position and result in the SCC not operating correctly without any warning or indicator from the cluster. If this occurs, have your vehicle checked by an authorized Kia dealer as soon as possible.

! CAUTION - Sensor Damage
To prevent sensor cover damage from occurring, wash the car with a soft cloth.

- Do not apply license plate frame or foreign objects such as a bumper sticker or a bumper guard near the radar sensor. Doing so may adversely affect the sensing performance of the radar.
- Always keep the radar sensor and lens cover clean and free of dirt and debris.
- Use only a soft cloth to wash the vehicle. Do not spray pressurized water directly on the sensor or sensor cover.
- Be careful not to apply unnecessary force on the radar sensor or sensor cover. If the sensor is forcibly moved out of proper alignment, the Smart Cruise Control System may not operate correctly. In this case, a warning message may not be displayed. Have the vehicle inspected by an authorized Kia dealer.
- If the front bumper becomes damaged in the area around the radar sensor, the Smart Cruise Control System may not operate properly. Have the vehicle inspected by an authorized Kia dealer.
• Use only genuine Kia parts to repair or replace a damaged sensor or sensor cover. Do not apply paint to the sensor cover.

To adjust the sensitivity of Smart Cruise Control
The sensitivity of vehicle speed when following the front vehicle to maintain the set distance can be adjusted. Go to the User Settings Mode (Driving Assist) and select SCC (Smart Cruise Control). You may select one of the three stages you prefer.

- Slow:
  Vehicle speed following the front vehicle to maintain the set distance is slower than normal speed.

- Normal:
  Vehicle speed following the front vehicle to maintain the set distance is normal

- Fast:
  Vehicle speed following the front vehicle to maintain the set distance is faster than normal speed.

* NOTICE
The system remembers the last selected mode.

To convert to cruise control mode:
The driver may choose to only use the cruise control mode (speed control function) by doing as follows:
1. Turn the SCC on (the cruise indicator light will be on but the system will not be activated).
2. Push the distance to distance switch for more than 2 seconds.
3. Choose between “Smart cruise control (SCC) mode” and “Cruise control (CC) mode.”

⚠️ WARNING
When using the cruise control mode, ensure it is safe to use the feature by assessing the distance to other vehicles since the system will not automatically slow down to avoid an accident.
Driving your vehicle

Limitations of the system

On curves

- On curves, the SCC may not detect a moving vehicle in your lane, and then your vehicle could accelerate to the set speed. Also, the vehicle speed will rapidly slow down when the vehicle ahead is recognized suddenly.

- Select the appropriate set speed on curves and adjust your vehicle speed by depressing the accelerator or brake pedal according to the road condition ahead and driving condition.

- Your vehicle speed can be reduced due to a vehicle in the adjacent lane. Adjust your vehicle speed by depressing the brake pedal according to the road condition ahead and driving condition. Apply the accelerator pedal and select the appropriate set speed. Check to be sure that the road conditions permit safe operation of the SCC.
**On inclines**

- During uphill or downhill driving, the SCC may not detect a moving vehicle in your lane, and cause your vehicle to accelerate to the set speed. Also, the vehicle speed will rapidly slow down when the vehicle ahead is recognized suddenly.
- Select the appropriate set speed on inclines and adjust your vehicle speed by depressing the accelerator or brake pedal according to the road condition ahead.

**Lane changing**

- A vehicle which moves into your lane from an adjacent lane cannot be recognized by the sensor until it is in the sensor's detection range.
- The sensor may not detect immediately when a vehicle cuts in suddenly. Always pay attention to the traffic, road and driving conditions.
- If a vehicle which moves into your lane is slower than your vehicle, your speed may decrease to maintain the distance to the vehicle ahead.
- If a vehicle which moves into your lane is faster than your vehicle, your vehicle will accelerate to the selected speed.
- Your vehicle may accelerate when a vehicle ahead of you disappears.
- When you are warned that the vehicle ahead of you is not detected, drive with caution.
Driving your vehicle

**Vehicle recognition**

Some vehicles ahead in your lane cannot be recognized by the sensor as follows:
- Narrow vehicles such as motorcycles or bicycles
- Vehicles offset to one side
- Slow-moving vehicles or suddenly decelerating vehicles
- Stopped vehicles
- Vehicles with small rear profile such as trailers with no loads

A vehicle ahead cannot be recognized correctly by the sensor if any of the following occurs:
- When the vehicle is pointing upwards due to overloading in the liftgate
- While making turns by steering
- When driving to one side of the lane
- When driving on narrow lanes or on curves

Adjust your vehicle speed by depressing the brake pedal according to the road condition ahead and driving condition.

If the vehicle right in front moves to another direction, the SCC system may not be able to avoid a not immediately sense a stopped vehicle in front and may crash. Always maintain a safe distance and be prepared to apply the brake pedal manually.
Driving your vehicle

• Always look out for pedestrians when your vehicle is maintaining a distance with the vehicle ahead.

• Always be cautious for vehicles that are taller with higher clearance, or vehicles carrying loads that stick out of the back of the vehicle.

WARNING - Emergency Stops
The smart cruise control system cannot guarantee the stopping in every emergency situation.
If an emergency stop is necessary, you must apply the brakes.

WARNING - Safe Use of SCC
The SCC can provide you with an additional level of safety and fatigue reduction. However you must maintain careful observation of the roadway in front and around you and maintain control of your vehicle and spacing around other vehicles as you normally would. For example, this will require you to apply the brakes as needed when coming upon a slower moving vehicle, or when a vehicle from another lane drives quickly in front of you.

WARNING - Inclines & Towing
Do not use SCC on steep inclines or when towing another vehicle or trailer since such extreme loading can interfere with your vehicle’s ability to maintain the selected speed.
Driving your vehicle

When using the Smart Cruise Control take the following precautions:

- If an emergency stop is necessary, you must apply the brakes. The vehicle cannot be stopped at every emergency situation by using the Smart Cruise Control System.

- Keep a safe distance according to road conditions and vehicle speed. If the vehicle to vehicle distance is too close during a high-speed driving, a serious collision may result.

- Always maintain sufficient braking distance and decelerate your vehicle by applying the brakes if necessary.

- The Smart Cruise Control System cannot recognize a stopped vehicle, pedestrians or an oncoming vehicle. Always look ahead cautiously to prevent unexpected and sudden situations from occurring.

- Vehicles moving in front of you with a frequent lane change may cause a delay in the system’s reaction or may cause the system to react to a vehicle actually in an adjacent lane. Always drive cautiously to prevent unexpected and sudden situations from occurring.

- Always be aware of the selected speed and vehicle to vehicle distance. The driver should not solely rely on the system but always pay attention to driving conditions and control your vehicle speed.

- The Smart Cruise Control System may not recognize complex driving situations so always pay attention to driving conditions and control your vehicle speed.

- Make sure to be well informed of the owner’s manual and practice using the smart cruise control system to ensure the safe use of the system.

- After an engine start, please stop for several seconds. If system initialization is not completed, the SCC does not normally operate.

- After an engine start, if any objects are not detected or the sensor cover is obscured with foreign substances, there is a possibility that the SCC system may not work.

- The following conditions may cause a malfunction: over-loading the liftgate, suspension modification, tire replacement with unauthorized tires or tires with different tread wear and pressure levels.
Outside rearview mirror may not alert the driver when:
- The outside rearview mirror housing is severely polluted
- The window is severely polluted
- The windows are severely tinted.

This device complies with Part 15 of the FCC rules.
Operation is subject to the following three conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.
3. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.

Radio frequency radiation exposure information:
This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance of 20 cm between the radiator (antenna) and your body. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
Driving your vehicle

DRIVE MODE INTEGRATED CONTROL SYSTEM (IF EQUIPPED)

The mode changes whenever the DRIVE MODE button is pressed.

- **Except DCT**
  
  ![Diagram](image)

  The drive mode may be selected according to the driver's preference or road condition.

  The system resets to be in the ECO mode, when the hybrid system is restarted.

  If there is a problem with the instrument cluster, the drive mode will be in ECO mode and may not change to NORMAL mode or SPORT mode.

- **For DCT**

  ![Diagram](image)

  When normal mode is selected, it is not displayed on the cluster.

**ECO mode (Active ECO)**

Active ECO helps improve fuel efficiency by controlling certain engine and transaxle system operating parameters. Fuel efficiency depends on the driver's driving habit and road condition.

- When the DRIVE MODE button is pressed and the ECO mode is selected, the ECO indicator (green) will illuminate to show that the Active ECO is operating.

- When the Active ECO is activated, it does not turn off even though the engine is restarted again. To turn off the system, press the DRIVE MODE button again.
Driving your vehicle

When Active ECO is activated:
• The acceleration may slightly be reduced even though you depress the accelerator fully.
• The air conditioner performance may be limited
• The shift pattern of the automatic transaxle may change.
• The engine noise may get louder.

The above situations are normal conditions when the active eco system is activated to improve fuel efficiency.

Limitation of Active ECO operation:
If the following conditions occur while Active ECO is operating, the system operation is limited even though there is no change in the ECO indicator.
• When the coolant temperature is low:
  The system will be limited until engine performance becomes normal.
• When driving up a hill:
  The system will be limited to gain power when driving uphill because the engine torque is restricted.
• When using manual mode:
  The system will be limited according to the shift location.
• When the accelerator pedal is deeply depressed for a few seconds:
  The system will be limited, judging that the driver wants to speed up.

SPORT mode
SPORT mode focuses on dynamic driving by automatically controlling the steering wheel, engine and transaxle system.
• When the DRIVE MODE button is pressed and the SPORT mode is selected, the SPORT indicator (yellow) will illuminate.
• Whenever the hybrid system is restarted, the Drive Mode will revert back to ECO mode. If SPORT mode is desired, re-select SPORT mode from the DRIVE MODE button
• If the system is activated:
  - After speeding, it maintains the gear and RPM for some time even though the accelerator pedal is not depressed.
  - Up-shifting is delayed.

**NOTICE**
In Sport drive mode, the fuel efficiency may decrease.
Driving your vehicle

LANE DEPARTURE WARNING SYSTEM (LDWS) (IF EQUIPPED)

This system detects the lane with a sensor at the front windshield and notifies you if it detects that your vehicle leaves the lane.

**WARNING - LDWS Alert**

The LDWS is a supplemental system and only intended to provide you with information regarding your vehicle's position on the roadway. Upon receiving an LDWS alert, you must take the necessary steps to maintain control of your vehicle. The LDWS does not provide any steering inputs into the vehicle for you. It can be dangerous to make a large sudden steering input in response to an alert, since that could result in loss of control.

- The LDWS does not make the vehicle change lanes. It is the driver's responsibility to always check the road conditions.
- If the sensor cannot detect the lane or if the vehicle speed does not exceed 40 mph (64 km/h), the LDWS will not be able to notify you if the vehicle leaves the lane.
- If your vehicle has window tint or other types of coating on the front windshield, the LDWS may not work properly.
- Prevent damage to the LDWS sensor from water or any liquid.
- Do not remove the LDWS parts and avoid damaging the sensor by avoiding strong impacts.
- Do not put objects that reflect light on the dash board.
- The operation of the LDWS can be affected by several factors (including environmental conditions). It is the responsibility of the driver to pay attention to the roadway and to maintain the vehicle in its lane at all times.
To operate the LDWS, press the button with the engine start/stop button in the ON position. The indicator illuminates on the cluster. To cancel the LDWS, press the button again.

If the system detects that your vehicle is leaving the lane when the LDWS is operating and vehicle speed exceeds 40 mph (64 km/h), the warning operates as follows:

1. **Visual warning**
   If you leave the lane, the lane you leave on the LCD display blinks yellow.

2. **Auditory warning**
   If you leave the lane, the warning sound operates.
Driving your vehicle

The color of symbol will change depend on the condition of LDWS system.

- White color: When you activate the lane departure warning system by pressing the LDWS button, system operating conditions are not satisfied or the sensor does not detect the lane line.

- Green color: When you activate the lane departure warning system by pressing the LDWS button, system operating conditions are satisfied and the sensor detect the lane line.

- Yellow color: when there is a malfunction with the lane departure warning system.

Warning indicator

When the LDWS is not working properly, the warning light will illuminate and the warning message will come on for a few seconds. After the message disappears, the master warning light will illuminate.

Take your vehicle to an authorized Kia dealer and have the system checked.
The LDWS does not operate when:
• The driver turns on the turn signal or the hazard warning flasher to change lane.
• Driving on the lane line.

NOTICE
To change lanes, operate the turn signal switch then change the lane.

The LDWS may not warn you even if the vehicle leaves the lane, or may warn you even if the vehicle does not leave the lane when:
• The lane is not visible due to snow, rain, stain, a puddle or other environmental conditions.
• The brightness of the outside changes suddenly such as tunnel enter/exit.
• The headlights are off at night or in a tunnel.
• The color of the lane marking from the road is difficult to distinguish.
• Driving on a steep grade or a curve.
• Light such as street light, sunlight or oncoming vehicle light reflects from water on the road.
• The lens or windshield is stained with foreign matter.
• The sensor cannot detect the lane because of fog, heavy rain or heavy snow.

• The surrounding of the inside rear view mirror temperature is high due to a direct ray of light.
• The lane is very wide or narrow.
• The lane line is damaged or indistinct.
• The windshield is fogged by humid air in the vehicle.
• The shadow is on the lane line by a median strip.
• The sensor cannot distinguish the lane from the road due to the dust/dirt.
• There is a mark similar to a lane line.
• There is a boundary structure.
• The distance from vehicle ahead is very short or the vehicle ahead drives hiding the lane line.
• The vehicle vibrates heavily due to road conditions.
• The lane number increases or decreases or the lane lines are crossing.

WARNING - LDWS Limitations
The Lane Departure Warning System is a supplemental system. Do not solely rely on the system but always pay attention and drive safely.
Driving your vehicle

- Putting something on the dashboard.
- Driving with the sun in front of you.
- Driving in areas under construction.
- The lane line is more than two in either side (Left/Right)

**Outside rearview mirror may not alert the driver when:**
- The outside rearview mirror housing is severely polluted
- The window is severely polluted
- The windows are severely tinted.

**This device complies with Part 15 of the FCC rules.**
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.
Driving your vehicle

BLIND SPOT DETECTION SYSTEM (BSD) (IF EQUIPPED)

➀ BSD (Blind spot detection)
Warning range is dependent on your vehicle speed. However, if the speed of your vehicle is faster by 10km/h or more than other nearby vehicles, the warning is not operated.

➁ LCA (Lane change assist)
When vehicles are approaching to your vehicle at high speed, the warning is operated.

➂ RCTA (Rear cross traffic alert)
When your vehicle moves backward, the sensor detects approaching vehicles to the left or right side direction and warning is operated.

The BSD (Blind spot detection) system uses a radar sensor to alert the driver while driving. It senses the rear side territory of the vehicle and provides information to the driver.

**WARNING - BSD Limitations**
- Always check the road condition while driving for unexpected situations even though the Blind Spot Detection System (BSD) is operating.
- The Blind Spot Detection System (BSD) is a supplemental system. Do not solely rely on the system and always pay attention to drive safely.
- The Blind Spot Detection System may not detect every object alongside the vehicle and is not a substitute for proper and safe lane changing procedures. Always drive safely and use caution when changing lanes.
Driving your vehicle

BSD (Blind Spot Detection) / LCA (Lane Change Assist)

Operating conditions

The indicator on the switch will illuminate when the BSD (Blind spot detection) system switch is pressed with the engine start/stop button switch ON. If the vehicle speed exceeds 18.6 mph (30 km/h), the system will activate.

If you press the switch again, the switch indicator and system will be turned off.

If the engine start/stop button switch is turned OFF and ON the system returns to the previous state.

When the system is not used turn the system off by pressing the switch.

When the system is turned on the warning light will illuminate for 3 seconds on the outside rearview mirror.

Warning type

The system will activate when:
1. The system is on
2. Vehicle speed is above 18.6 mph (30 km/h)
3. Other vehicles are detected in the rear side

If a vehicle is detected within the boundary of the system, a warning light will illuminate on the outside rearview mirror.

If the detected vehicle is not in detection range, the warning will be turned off.

WARNING

The Blind Spot Detection System with Lane Change Assist and Rear Cross Traffic Alert is not a substitute for proper and safe lane changing procedures. Always drive safely and use caution when changing lanes. The Blind Spot Detection System may not detect every object alongside the vehicle.
Driving your vehicle

The second stage alarm will activate when:
1. The first stage alert is on
2. The turn signal is on to change a lane

When the second stage alert is activated, a warning light will be blinking on the outside rearview mirror and an alarm will sound.

If you move the turn signal switch to origin position, the second stage alert will be deactivated.

- The second stage alarm can be deactivated.

- To activate the alarm:
  Go to the User Settings Mode → Sound and select "BSD" on the LCD display.

- To deactivate the alarm:
  Go to the User Settings Mode → Sound and deselect "BSD" on the LCD display.

The alarm function helps alert the driver. Deactivate this function only when it is necessary.

Detecting sensor

The sensors are located inside the rear bumper.
Always keep the rear bumper clean for the system to work properly.
Driving your vehicle

Warning message
The message (“Blind Spot Detection disabled. Radar blocked”) will appear to notify the driver if there are foreign substances on the rear bumper or it is hot near the rear bumper. The light on the switch and the system will be turned off automatically.
Remove the foreign substance on the rear bumper.
After the foreign substance is removed, if you drive for approximately 10 minutes, the system will work normally.
If the system does not work normally even though the foreign substance is removed, take your vehicle to an authorized Kia dealer and have the system checked.
It is possible to get the message with no foreign substance on the rear bumper, for example, when driving in sparse rural or open area, such as desert, where there is insufficient data for operation.
This message may also activate during heavy rain or due to road spray.
The warning message may activate with the rear bumper, in which the sensor is located, is covered or blocked with a foreign matter such as a sticker, a bumper guard, a bicycle stand, etc.
When trailer/carrier or other equipment is installed on the rear of the vehicle
Turn OFF the system when using a trailer, carrier or other equipment. Make sure to remove a trailer, carrier or other equipment prior to use of the BSD(Blind spot detection system). Remove the foreign substance on the bumper, if any.
Also, when a trailer or carrier is installed, the message may appear. In this case, the vehicle does not need service.
If the system does not work properly, a warning message will appear and the light on the switch will turn off. The system will turn off automatically.
Have the system checked by an authorized Kia dealer.
**RCTA (Rear cross traffic alert)**

When your vehicle moves backwards from a parking position, the sensor detects approaching vehicles to the left or right side direction and gives information to the driver.

**Operating conditions**

- Select RCTA (Rear Cross Traffic Alert) in “User Settings” under "Driving Assist" on the instrument cluster. The system will turn on and stand by to be activated.
- Select RCTA again, to turn the system off.
- If the vehicle is turned off and on again, the RCTA system will return to the state right before the vehicle was turned off. Turn the RCTA system off when not in use.
- The system is operated when the vehicle speed is below 6 mph (10 km/h) with the shift lever in R (Reverse).
- The RCTA (Rear Cross Traffic Alert) detection range is 1.6 feet (0.5 m) ~ 65 feet (20 m) based on side direction. If an approaching vehicle speed is 4 mph (7 km/h) ~ 22 mph (36 km/h) in detection range, The warning is on. However, the system sensing range is different based on conditions. Always pay attention to surrounding.
Driving your vehicle

- If an approaching vehicle detected by sensors, the warning is chime and the warning light will blink on the outside rearview mirror.
- If the detected vehicle is out of detection range, moving away in the opposite direction or moving slow, the warning is cancelled.
- The system may not be operating properly due to other factors or circumstances, so always pay attention to your surrounding.
- If the bumper on either side is blocked by a barrier or vehicles, the system sensing ability may be deteriorated.

**WARNING**

The Blind Spot Detection System with Lane Change Assist and Rear Cross Traffic Alert is not a substitute for proper and safe lane changing procedures. Always drive safely and use caution when changing lanes. The Blind Spot Detection System and Rear Cross Traffic Alert may not detect every object alongside the vehicle.

**NOTICE**

- The system may not work properly if the bumper has been replaced or if a repair work has been done near the sensor.
- The detection area differs according to the roads width. If the road is narrow the system may detect other vehicles in the second next lane.
- On the contrary, if the road is very wide the system may not detect other vehicles in the next lane.
- The system might be turned off due to strong electromagnetic waves.
**Non-operating condition**
Outside rearview mirror may not alert the driver when:
- The outside rearview mirror housing is damaged or covered with debris.
- The window is covered with debris.
- The windows are severely tinted.

**Driver’s Attention**
The driver must be cautious in the below situations, because the system may not detect other vehicles or objects in certain circumstances.
- The outside rearview mirror housing is damaged or covered with debris.
- The window is covered with debris.
- The windows are severely tinted.
- The vehicle drives on a curved road or through a tollgate.
- The sensor is polluted with rain, snow, mud, etc.
- The rear bumper, in which the sensor is located, is covered or blocked with a foreign matter such as a sticker, a bumper guard, a bicycle stand, etc.
- The rear bumper is damaged, or the sensor is out of the original default position.
- The vehicle height gets lower or higher due to heavy loading in a trunk, abnormal tire pressure, etc.
- The vehicle drives in a bad weather such as heavy rain or snow.

(Continued)
- There is a fixed object near the vehicle, such as a guardrail.
- A big vehicle is near such as a bus or truck.
- A motorcycle or bicycle is near.
- A flat trailer is near.
- If the vehicle has started at the same time as the vehicle next to you and has accelerated.
- When the other vehicle passes at a very fast speed.
- While changing lanes.
- When going down or up a steep, uneven road.
- When the other vehicle approaches very close.
- When a trailer or carrier is installed.
- When the temperature of the rear bumper is very high or low.
(Continued)
- When the sensors are blocked by other vehicles, walls or parking-lot pillars.
- When the detected vehicle also moves back, as your vehicle drives back.
- If there are small things like shopping cart and baby carriage.
- If there is low height vehicle like sport vehicle.
- When other vehicles are close to your vehicle.
- When the vehicle in the next lane moves two lanes away from you OR when the vehicle two lanes away moves to the next lane from you.
- When driving through a narrow road with many plants.
- When driving on wet surface.

Outside rearview mirror may not alert the driver when:
- The outside rearview mirror housing is severely polluted
- The window is severely polluted
- The windows are severely tinted.

This device complies with Part 15 of the FCC rules.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.
ECONOMICAL OPERATION

Your vehicle's fuel economy depends mainly on your style of driving, where you drive and when you drive. Each of these factors affects how many miles (kilometers) you can get from a gallon (liter) of fuel. To operate your vehicle as economically as possible, use the following driving suggestions to help save money in both fuel and repairs:

• Drive smoothly. Accelerate at a moderate rate. Don't make "jack-rabbit" starts or full-throttle shifts and maintain a steady cruising speed. Don't race between stoplights. Try to adjust your speed to the traffic so you don't have to change speeds unnecessarily. Avoid heavy traffic whenever possible. Always maintain a safe distance from other vehicles so you can avoid unnecessary braking. This also reduces brake wear.

• Drive at a moderate speed. The faster you drive, the more fuel your vehicle uses. Driving at a moderate speed, especially on the highway, is one of the most effective ways to reduce fuel consumption.

• Don't "ride" the brake or clutch pedal. This can increase fuel consumption and also increase wear on these components. In addition, driving with your foot resting on the brake pedal may cause the brakes to overheat, which reduces their effectiveness and may lead to more serious consequences.

• Take care of your tires. Keep them inflated to the recommended pressure. Incorrect inflation, either too much or too little, results in unnecessary tire wear. Check the tire pressures at least once a month.

• Be sure that the wheels are aligned correctly. Improper alignment can result from hitting curbs or driving too fast over irregular surfaces. Poor alignment causes faster tire wear and may also result in other problems as well as greater fuel consumption.

• Keep your vehicle in good condition. For better fuel economy and reduced maintenance costs, maintain your vehicle in accordance with the maintenance schedule in section 8. If you drive your vehicle in severe conditions, more frequent maintenance is required (see section 8 for details).

• Keep your vehicle clean. For maximum service, your vehicle should be kept clean and free of corrosive materials. It is especially important that mud, dirt, ice, etc. not be allowed to accumulate on the underside of the vehicle. This extra weight can result in increased fuel consumption and also contribute to corrosion.

• Travel lightly. Don't carry unnecessary weight in your vehicle. Weight reduces fuel economy.

• Don't let the engine idle longer than necessary. If you are waiting (and not in traffic), turn off your engine and restart only when you're ready to go.
Driving your vehicle

• Remember, your vehicle does not require extended warm-up. After the engine has started, allow the engine to run for 10 to 20 seconds prior to placing the vehicle in gear. In very cold weather, however, give your engine a slightly longer warm-up period.

• Don’t "lug" or "over-rev" the engine. Lugging is driving too slowly in a very high gear resulting in engine bucking. If this happens, shift to a lower gear. Over-revving is racing the engine beyond its safe limit. This can be avoided by shifting at the recommended speed.

• Use your air conditioning sparingly. The air conditioning system is operated by engine power so your fuel economy is reduced when you use it.

• Open windows at high speeds can reduce fuel economy.

• Fuel economy is less in crosswinds and headwinds. To help offset some of this loss, slow down when driving in these conditions.

WARNING

- Engine off during motion

Never turn the engine off to coast down hills or anytime the vehicle is in motion. The power steering and power brakes will not function properly without the engine running. In addition, turning off the ignition while driving could engage the steering wheel lock resulting in loss of vehicle steering. Keep the engine on and downshift to an appropriate gear for engine braking effect.

Keeping a vehicle in good operating condition is important both for economy and safety. Therefore, have an authorized Kia dealer perform scheduled inspections and maintenance.
Driving your vehicle

SPECIAL DRIVING CONDITIONS

Hazardous driving conditions
When hazardous driving conditions are encountered such as water, snow, ice, mud, sand, or similar hazards, follow these suggestions:
• Drive cautiously and allow extra distance for braking.
• Avoid sudden braking or steering.
• When braking with non-ABS brakes pump the brake pedal with a light up-and-down motion until the vehicle is stopped.
Do not pump the brake pedal on a vehicle equipped with ABS.
• If stalled in snow, mud, or sand, use second gear. Accelerate slowly to avoid spinning the drive wheels.
• Use sand, rock salt, or other non-slip material under the drive wheels to provide traction when stalled in ice, snow, or mud.

Reducing the risk of a rollover
This multi-purpose passenger vehicle is defined as a Crossover Utility Vehicle (CUV). Utility vehicles have a significantly higher rollover rate than other types of vehicles. CUV’s have higher ground clearance and a narrower track to make them capable of performing in a wide variety of off-road applications. Specific design characteristics give them a higher center of gravity than ordinary vehicles. An advantage of the higher ground clearance is a better view of the road, which allows you to anticipate problems. They are not designed for cornering at the same speeds as conventional passenger vehicles, any more than low-slung sports vehicles are designed to perform satisfactorily in off-road conditions. Due to this risk, driver and passengers are strongly recommended to buckle their seat belts. In a rollover crash, an unbelted person is significantly more likely to die than a person wearing a seat belt. There are steps that a driver can make to reduce the risk of a rollover.

WARNING - Downshifting
Do not downshift with an automatic transaxle while driving on slippery surfaces. The sudden change in tire speed could cause the tires to skid and result in an accident.
Driving your vehicle

If at all possible, avoid sharp turns or abrupt maneuvers, do not load your roof rack with heavy cargo, and never modify your vehicle in any way.

**WARNING - Replacement tires**
Always use the size and type of tires recommended in the tire section of the manual. Installation of variant tires can affect the safety and performance of your vehicle.

---

**WARNING - Rollover**
As with other Crossover Utility Vehicle (CUV), failure to operate this vehicle correctly may result in loss of control, an accident or vehicle rollover.
- Utility vehicles have a significantly higher rollover rate than other types of vehicles.
- Specific design characteristics (higher ground clearance, narrower track, etc.) give this vehicle a higher center of gravity than ordinary vehicles.
- A CUV is not designed for cornering at the same speeds as conventional vehicles.
- Avoid sharp turns or abrupt maneuvers.
- In a rollover crash, an unbelted person is significantly more likely to die than a person wearing a seat belt. Make sure everyone in the vehicle is properly buckled up.

---

**Rocking the vehicle**
If it is necessary to rock the vehicle to free it from snow, sand, or mud, first turn the steering wheel right and left to clear the area around your front wheels. Then, shift back and forth between 1st (First) and R (Reverse) in vehicles equipped with a manual transaxle or R (Reverse) and any forward gear in vehicles equipped with an automatic transaxle. Do not race the engine, and spin the wheels as little as possible. If you are still stuck after a few tries, have the vehicle pulled out by a tow vehicle to avoid engine overheating and possible damage to the transaxle.

---

**WARNING - Sudden vehicle movement**
Do not attempt to rock the vehicle if people or objects are nearby. The vehicle may suddenly move forward or backwards as it becomes unstuck.
Driving your vehicle

**CAUTION - Vehicle rocking**
*Prolonged rocking may cause engine overheating, transaxle damage or failure, and tire damage.*

**CAUTION - Spinning tires**
*Do not spin the wheels, especially at speeds more than 35 mph (56 km/h). Spinning the wheels at high speeds when the vehicle is stationary could cause a tire to overheat which could result in tire damage that may injure bystanders.*

The ESC system should be turned OFF prior to rocking the vehicle.

---

**Smooth cornering**

Avoid braking or gear changing in corners, especially when roads are wet. Ideally, corners should always be taken under gentle acceleration. If you follow these suggestions, tire wear will be held to a minimum.

---

**Driving at night**

Because night driving presents more hazards than driving in the daylight, here are some important tips to remember:

- Slow down and keep more distance between you and other vehicles, as it may be more difficult to see at night, especially in areas where there may not be any street lights.
Driving your vehicle

• Adjust your mirrors to reduce the glare from other driver's headlights.
• Keep your headlights clean and properly aimed. (On vehicles not equipped with the automatic headlight aiming feature.) Dirty or improperly aimed headlights will make it much more difficult to see at night.
• Avoid staring directly at the headlights of oncoming vehicles. You could be temporarily blinded, and it will take several seconds for your eyes to readjust to the darkness.

Driving in the rain

Rain and wet roads can make driving dangerous, especially if you're not prepared for the slick pavement. Here are a few things to consider when driving in the rain:

• A heavy rainfall will make it harder to see and will increase the distance needed to stop your vehicle, so slow down.
• Keep your windshield wiping equipment in good shape. Replace your windshield wiper blades when they show signs of streaking or missing areas on the windshield.
• If your tires are not in good condition, making a quick stop on wet pavement can cause a skid and possibly lead to an accident. Be sure your tires are in good shape.
• Turn on your headlights to make it easier for others to see you.
• Driving too fast through large puddles can affect your brakes. If you must go through puddles, try to drive through them slowly.
• If you believe you may have gotten your brakes wet, apply them lightly while driving until normal braking operation returns.
Driving in flooded areas
Avoid driving through flooded areas unless you are sure the water is no higher than the bottom of the wheel hub. Drive through any water slowly. Allow adequate stopping distance because brake performance may be affected.

After driving through water, dry the brakes by gently applying them several times while the vehicle is moving slowly.

Driving off-road
Drive carefully off-road because your vehicle may be damaged by rocks or roots of trees. Become familiar with the off-road conditions where you are going to drive before you begin driving.

Highway driving
Tires
Adjust the tire inflation pressures to specification. Low tire inflation pressures will result in overheating and possible failure of the tires.

Avoid using worn or damaged tires which may result in reduced traction or tire failure.

Never exceed the maximum tire inflation pressure shown on the tires.

⚠️ WARNING - Under/over inflated tires
Always check the tires for proper inflation before driving. Underinflated or overinflated tires can cause poor handling, loss of vehicle control, and sudden tire failure leading to accidents, injuries, and even death. For proper tire pressures, refer to “Tires and wheels” in section 9.

⚠️ WARNING - Tire tread
Always check the tire tread before driving your vehicle. Worn-out tires can result in loss of vehicle control. Worn-out tires should be replaced as soon as possible. For further information and tread limits, refer to "Tires and wheels" in section 8.
Driving your vehicle

**Fuel, engine coolant and engine oil**
High speed travel consumes more fuel than urban motoring. Do not forget to check both the engine coolant and engine oil.

**Drive belt**
A loose or damaged drive belt may result in overheating of the engine.
Driving your vehicle

WINTER DRIVING

Severe weather conditions in the winter result in greater wear and other problems. To minimize the problems of winter driving, you should follow these suggestions:

Snowy or icy conditions

To drive your vehicle in deep snow, it may be necessary to use snow tires or to install tire chains on your tires. If snow tires are needed, it is necessary to select tires equivalent in size and type of the original equipment tires. Failure to do so may adversely affect the safety and handling of your vehicle. Furthermore, speeding, rapid acceleration, sudden brake applications, and sharp turns are potentially very hazardous practices. During deceleration, use engine braking to the fullest extent. Sudden brake applications on snowy or icy roads may cause skids to occur. You need to keep sufficient distance between the vehicle in operation in front of your vehicle. Also, apply the brake gently. It should be noted that installing tire chains on the tire will provide a greater driving force, but will not prevent side skids.

NOTICE

Tire chains are not legal in all states. Check state laws before fitting tire chains.

Snow tires

If you mount snow tires on your vehicle, make sure they are radial tires of the same size and load range as the original tires. Mount snow tires on all four wheels to balance your vehicle's handling in all weather conditions. Keep in mind that the traction provided by snow tires on dry roads may not be as high as your vehicle's original equipment tires. You should drive cautiously even when the roads are clear. Check with the tire dealer for maximum speed recommendations. Do not install studded tires without first checking local, state and municipal regulations for possible restrictions against their use.

WARNING - Snow tire size

Snow tires should be equivalent in size and type to the vehicle's standard tires. Otherwise, the safety and handling of your vehicle may be adversely affected.
Tire chains

Since the sidewalls of radial tires are thinner, they can be damaged by mounting some types of snow chains on them. Therefore, the use of snow tires is recommended instead of snow chains. Do not mount tire chains on vehicles equipped with aluminum wheels; snow chains may cause damage to the wheels. If snow chains must be used, use wire-type chains with a thickness of less than 0.59 in (15 mm). Damage to your vehicle caused by improper snow chain use is not covered by your vehicle manufacturer warranty.

Install tire chains only in pair and only on the front tires.

⚠️ CAUTION - Snow chains
Make sure the snow chains are the correct size and type for your tires. Incorrect snow chains can cause damage to the vehicle body and suspension and may not be covered by your vehicle manufacturer warranty.

Chain installation
When installing chains, follow the manufacturer's instructions and mount them as tightly as you can. Drive slowly with chains installed. If you hear the chains contacting the body or chassis, stop and tighten them. If they still make contact, slow down until it stops. Remove the chains as soon as you begin driving on cleared roads.

When mounting snow chains, park the vehicle on level ground away from traffic. Turn on the vehicle Hazard Warning flashers and place a triangular emergency warning device behind the vehicle if available. Always place the vehicle in P (Park), apply the parking brake and turn off the engine before installing snow chains.

- The use of chains may adversely affect vehicle handling.
- Do not exceed 20 mph (30 km/h) or the chain manufacturer's recommended speed limit, whichever is lower.
- Drive carefully and avoid bumps, holes, sharp turns, and other road hazards, which may cause the vehicle to bounce.
- Avoid sharp turns or locked-wheel braking.
Use high quality ethylene glycol coolant

Your vehicle is delivered with high quality ethylene glycol coolant in the cooling system. It is the only type of coolant that should be used because it helps prevent corrosion in the cooling system, lubricates the water pump and prevents freezing. Be sure to replace or replenish your coolant in accordance with the maintenance schedule in section 8. Before winter, have your coolant tested to assure that its freezing point is sufficient for the temperatures anticipated during the winter.

Check battery and cables

Winter puts additional burdens on the battery system. Visually inspect the battery and cables as described in section 8. The level of charge in your battery can be checked by an authorized Kia dealer or a service station.

Change to "winter weight" oil if necessary

In some climates it is recommended that a lower viscosity "winter weight" oil be used during cold weather. See section 9 for recommendations. If you aren’t sure what weight oil you should use, consult an authorized Kia dealer.

Check spark plugs and ignition system

Inspect your spark plugs as described in section 8 and replace them if necessary. Also check all ignition wiring and components to be sure they are not cracked, worn or damaged in any way.

To keep locks from freezing

To keep the locks from freezing, squirt an approved de-icer fluid or glycerine into the key opening. If a lock is covered with ice, squirt it with an approved de-icing fluid to remove the ice. If the lock is frozen internally, you may be able to thaw it out by using a heated key. Handle the heated key with care to avoid injury.

Use approved window washer anti-freeze in system

To keep the water in the window washer system from freezing, add an approved window washer anti-freeze solution in accordance with instructions on the container. Window washer anti-freeze is available from an authorized Kia dealer and most auto parts outlets. Do not use engine coolant or other types of anti-freeze as these may damage the paint finish.

⚠️ CAUTION - Snow chains

- Chains that are the wrong size or improperly installed can damage your vehicle’s brake lines, suspension, body and wheels.
- Stop driving and retighten the chains any time you hear them hitting the vehicle.

Use approved window washer anti-freeze in system

To keep the water in the window washer system from freezing, add an approved window washer anti-freeze solution in accordance with instructions on the container. Window washer anti-freeze is available from an authorized Kia dealer and most auto parts outlets. Do not use engine coolant or other types of anti-freeze as these may damage the paint finish.
Driving your vehicle

Don’t let your parking brake freeze
Under some conditions your parking brake can freeze in the engaged position. This is most likely to happen when there is an accumulation of snow or ice around or near the rear brakes or if the brakes are wet. If there is a risk the parking brake may freeze, apply it only temporarily while you put the gear shift lever in P (Park, automatic transaxle) or in first or reverse gear (manual transaxle) and block the rear wheels so the vehicle cannot roll. Then release the parking brake.

Don’t let ice and snow accumulate underneath
Under some conditions, snow and ice can build up under the fenders and interfere with the steering. When driving in severe winter conditions where this may happen, you should periodically check underneath the vehicle to be sure the movement of the front wheels and the steering components are not obstructed.

Carry emergency equipment
Depending on the severity of the weather, you should carry appropriate emergency equipment. Some of the items you may want to carry include tow straps or chains, flashlight, emergency flares, sand, shovel, jumper cables, window scraper, gloves, ground cloth, coveralls, blanket, etc.

TRAILER TOWING
We do not recommend using this vehicle for trailer towing.
Driving your vehicle

VEHICLE LOAD LIMIT

Tire and loading information label

The label located on the driver's door sill gives the original tire size, cold tire pressures recommended for your vehicle, the number of people that can be in your vehicle and vehicle capacity weight.
Driving your vehicle

**Vehicle capacity weight:**
827 lbs. (375 kg)
Vehicle capacity weight is the maximum combined weight of occupants and cargo. If your vehicle is equipped with a trailer, the combined weight includes the tongue load.

**Seating capacity:**
Total - 5 persons
(Front seat : 2 persons, Rear seat : 3 persons)
Seating capacity is the maximum number of occupants including a driver, your vehicle may carry.
However, the seating capacity may be reduced based upon the weight of all of the occupants, and the weight of the cargo being carried or towed.
Do not overload the vehicle as there is a limit to the total weight, or load limit including occupants and cargo, the vehicle can carry.

**Towing capacity:**
We do not recommend using this vehicle for trailer towing.
Cargo capacity:
The cargo capacity of your vehicle will increase or decrease depending on the weight and the number of occupants and the tongue load, if your vehicle is equipped with a trailer.

Steps for determining correct load limit

1. Locate the statement "The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs." on your vehicle's placard.

2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.

3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs.

   \[(1400 - 750 \times 5) = 650 \text{ lbs.}\]

5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

6. If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.
Driving your vehicle

Refer to your vehicle’s tire and loading information label for specific information about your vehicle’s capacity weight and seating positions. The combined weight of the driver, passengers and cargo should never exceed your vehicle’s capacity weight.

</table>
The certification label is located on the driver's door sill at the center pillar. This label shows the maximum allowable weight of the fully loaded vehicle. This is called the GVWR (Gross Vehicle Weight Rating). The GVWR includes the weight of the vehicle, all occupants, fuel and cargo.

This label also tells you the maximum weight that can be supported by the front and rear axles, called Gross Axle Weight Rating (GAWR).

To find out the actual loads on your front and rear axles, you need to go to a weigh station and weigh your vehicle. Your dealer can help you with this. Be sure to spread out your load equally on both sides of the centerline.

The label will help you decide how much cargo and installed equipment your vehicle can carry.

If you carry items inside your vehicle - like suitcases, tools, packages, or anything else - they are moving as fast as the vehicle. If you have to stop or turn quickly, or if there is a crash, the items will keep going and can cause an injury if they strike the driver or a passenger.

---

**WARNING - Over loading**

Never exceed the GVWR for your vehicle, the GAWR for either the front or rear axle and vehicle capacity weight. Exceeding these ratings can affect your vehicle’s handling and braking ability.
Driving your vehicle

**WARNING - Over loading**
Do not overload your vehicle. Overloading your vehicle can cause heat buildup in your vehicle's tires and possible tire failure, increased stopping distances and poor vehicle handling all of which may result in a crash.

**WARNING - Loose cargo**
Do not travel with unsecured blunt objects in the passenger compartment of your vehicle (e.g. suit cases or unsecured child seats). These items may strike occupant during a sudden stop or crash.

**NOTICE**
Overloading your vehicle may cause damage. Repairs would not be covered by your warranty. Do not overload your vehicle.
VEHICLE WEIGHT GLOSSARY

This section will guide you in the proper loading of your vehicle and/or trailer, to keep your loaded vehicle weight within its design rating capability, with or without a trailer. Properly loading your vehicle will provide maximum return of the vehicle design performance. Before loading your vehicle, familiarize yourself with the following terms for determining your vehicle's weight ratings, with or without a trailer, from the vehicle's specifications and the certification label:

**Base curb weight**
This is the weight of the vehicle including a full tank of fuel and all standard equipment. It does not include passengers, cargo, or optional equipment.

**Vehicle curb weight**
This is the weight of your new vehicle when you picked it up from your dealer plus any aftermarket equipment.

**Cargo weight**
This figure includes all weight added to the Base Curb Weight, including cargo and optional equipment.

**GAW (Gross axle weight)**
This is the total weight placed on each axle (front and rear) - including vehicle curb weight and all payload.

**GAWR (Gross axle weight rating)**
This is the maximum allowable weight that can be carried by a single axle (front or rear). These numbers are shown on the certification label. The total load on each axle must never exceed its GAWR.

**GVW (Gross vehicle weight)**
This is the Base Curb Weight plus actual Cargo Weight plus passengers.

**GVWR (Gross vehicle weight rating)**
This is the maximum allowable weight of the fully loaded vehicle (including all options, equipment, passengers and cargo). The GVWR is shown on the certification label located on the driver's door sill.

ROAD WARNING
Hazard warning flasher

The hazard warning flasher serves as a warning to other drivers to exercise extreme caution when approaching, overtaking, or passing your vehicle. It should be used whenever emergency repairs are being made or when the vehicle is stopped near the edge of a roadway.

Depress the flasher switch with the ignition switch in any position. The flasher switch is located in the center console switch panel. All turn signal lights will flash simultaneously.

- The hazard warning flasher operates whether your vehicle is running or not.
- The turn signals do not work when the hazard flasher is on.
- Care must be taken when using the hazard warning flasher while the vehicle is being towed.
IN CASE OF AN EMERGENCY WHILE DRIVING

If the engine stalls at a crossroad or crossing
If the engine stalls at a crossroad or crossing, set the shift lever in the N (Neutral) position and then push the vehicle to a safe place.

If you have a flat tire while driving
If a tire goes flat while you are driving:
1. Take your foot off the accelerator pedal and let the vehicle slow down while driving straight ahead. Do not apply the brakes immediately or attempt to pull off the road as this may cause a loss of control. When the vehicle has slowed to such a speed that it is safe to do so, brake carefully and pull off the road. Drive off the road as far as possible and park on a firm level ground. If you are on a divided highway, do not park in the median area between the two traffic lanes.
2. When the vehicle is stopped, turn on your emergency hazard flashers, set the parking brake and put the transaxle in P (Park, automatic transaxle) or reverse (manual transaxle).
3. Have all passengers get out of the vehicle. Be sure they all get out on the side of the vehicle that is away from traffic.
4. When changing a flat tire, follow the instruction provided later in this section.

If the engine stalls while driving
1. Reduce your speed gradually, keeping a straight line. Move cautiously off the road to a safe place.
2. Turn on your emergency flashers.
3. Try to start the engine again. If your vehicle will not start, contact an authorized Kia dealer or seek other qualified assistance.

* NOTICE
If there was a check light and loss of power or stall and, if say to do so, wait at least 10 seconds to restart the vehicle after it stalls. This may reset the car so it will no longer run at low power (limp home) condition.
What to do in an emergency

IF THE ENGINE WILL NOT START

If engine doesn't turn over or turns over slowly
1. If your vehicle has an automatic transaxle, be sure the shift lever is in N (Neutral) or P (Park) and the emergency brake is set.
2. Check the battery connections to be sure they are clean and tight.
3. Turn on the interior light. If the light dims or goes out when you operate the starter, the battery is discharged.
4. Check the starter connections to be sure they are securely tightened.
5. Do not push or pull the vehicle to start it. See instructions for "Jump starting".

If engine turns over normally but does not start
1. Check the fuel level.
2. With the ignition switch in the LOCK position, check all connectors at the ignition coils and spark plugs. Reconnect any that may be disconnected or loose.
3. Check the fuel line in the engine compartment.
4. If the engine still does not start, call an authorized Kia dealer or seek other qualified assistance.

WARNING - Push/pull start
Do not push or pull the vehicle to start it. Push or pull starting may cause the catalytic converter to overload and create a fire hazard.
EMERGENCY STARTING

Jump starting can be dangerous if done incorrectly. Therefore, to avoid harm to yourself or damage to your vehicle or battery, follow these jump starting procedures. If in doubt, we strongly recommend that you have a competent technician or towing service jump start your vehicle.

**WARNING - Battery**
Never attempt to check the electrolyte level of the battery as this may cause the battery to rupture or explode causing serious injury.

**WARNING - Frozen batteries**
Do not attempt to jump start the vehicle if the discharged battery is frozen or if the electrolyte level is low as the battery may rupture or explode.

**CAUTION - 12 volt battery**
Use only a 12-volt jumper system. You can damage a 12-volt starting motor, ignition system, and other electrical parts beyond repair by use of a 24-volt power supply (either two 12-volt batteries in series or a 24-volt motor generator set).

Connect cables in numerical order and disconnect in reverse order.

(A) : Jumper Cables
(B) : Booster battery
(C) : Discharged battery
What to do in an emergency

Jump starting procedure

1. Make sure the booster battery is 12-volt and that its negative terminal is grounded.
2. If the booster battery is in another vehicle, do not allow the vehicles to come in contact.
3. Turn off all unnecessary electrical loads.
4. Connect the jumper cables in the exact sequence shown in the illustration. First connect one end of a jumper cable to the positive terminal of the discharged battery (1), then connect the other end to the positive terminal of the booster battery (2).

Proceed to connect one end of the other jumper cable to the negative terminal of the booster battery (3), then the other end to a solid, stationary, metallic point (for example, the engine lifting bracket) away from the battery (4). Do not connect it to or near any part that moves when the engine is cranked.

Do not allow the jumper cables to contact anything except the correct battery terminals or the correct ground. Do not lean over the battery when making connections.

WARNING - Battery
Keep all flames or sparks away from the battery. The battery produces hydrogen gas which will explode if exposed to flame or sparks.

WARNING - Sulfuric acid risk
When jump starting your vehicle be careful not to get acid on yourself, your clothing or on the vehicle. Automobile batteries contain sulfuric acid. This is poisonous and highly corrosive.

WARNING - Battery cables
Do not connect the jumper cable from the negative terminal of the booster battery to the negative terminal of the discharged battery. This can cause the discharged battery to overheat and crack, releasing battery acid.

Make sure to connect one end of the jumper cable to the negative terminal of the booster battery, and the other end to a metallic point, far away from the battery.
**NOTICE**
Make sure to connect one end of the jumper cable to the negative terminal of the booster battery, and the other end to a metallic point, far away from the battery.

5. Start the engine of the vehicle with the booster battery and let it run at 2,000 rpm, then start the engine of the vehicle with the discharged battery.

*If the cause of your battery discharging is not apparent, you should have your vehicle checked by an authorized Kia dealer.*

---

**Push-starting**
Vehicles equipped with automatic transaxle lock system cannot be push-started.
Follow the directions in this section for jump-starting.

---

**WARNING - Tow starting vehicle**
*Never tow a vehicle to start it because the sudden surge forward when the engine starts could cause a collision with the tow vehicle.*
What to do in an emergency

IF THE ENGINE OVERHEATS

If your temperature gauge indicates overheating, you experience a loss of power, or hear loud pinging or knocking, the engine will probably be too hot. If this happens, you should:

1. Pull off the road and stop as soon as it is safe to do so.
2. Place the shift lever in P (Park, automatic transaxle) or Neutral (manual transaxle) and set the parking brake. If the air conditioning is on, turn it off.
3. If engine coolant is running out under the vehicle or steam is coming out from underneath the hood, stop the engine. Do not open the hood until the coolant has stopped running or the steaming has stopped. If there is no visible loss of engine coolant and no steam, leave the engine running and check to be sure the engine cooling fan is operating. If the fan is not running, turn the engine off.
4. Check to see if the water pump drive belt is missing. If it is not missing, check to see that it is tight. If the drive belt seems to be satisfactory, check for coolant leaking from the radiator, hoses or under the vehicle. (If the air conditioning had been in use, it is normal for cold water to be draining from it when you stop).
5. If the water pump drive belt is broken or engine coolant is leaking out, stop the engine immediately and call the nearest authorized Kia dealer for assistance.
6. If you cannot find the cause of the overheating, wait until the engine temperature has returned to normal. Then, if coolant has been lost, carefully add coolant to the reservoir to bring the fluid level in the reservoir up to the halfway mark.
7. Proceed with caution, keeping alert for further signs of overheating. If overheating happens again, call an authorized Kia dealer for assistance.

Serious loss of coolant indicates there is a leak in the cooling system and this should be checked as soon as possible by an authorized Kia dealer.

WARNING - Under the hood
While the engine is running, keep hair, hands and clothing away from moving parts such as the fan and drive belts to prevent injury.

WARNING - Radiator cap
Do not remove the radiator cap when the engine is hot. This may result in coolant being blown out of the opening and cause serious burns.
TIRE PRESSURE MONITORING SYSTEM (TPMS)

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.
What to do in an emergency

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

* NOTICE
If the TPMS, Low Tire Pressure indicator do not illuminate for 3 seconds when the ignition switch is turned to the ON position or engine is running, or if they remain illuminated after coming on for approximately 3 seconds, take your vehicle to your nearest authorized Kia dealer and have the system checked.

 NOTICE

Low tire pressure telltale

When the tire pressure monitoring system warning indicators are illuminated, one or more of your tires is significantly under-inflated.

If the telltale illuminates, immediately reduce your speed, avoid hard cornering and anticipate increased stopping distances. You should stop and check your tires as soon as possible. Inflate the tires to the proper pressure as indicated on the vehicle's placard or tire inflation pressure label located on the driver's side center pillar outer panel. If you cannot reach a service station or if the tire cannot hold the newly added air, replace the low pressure tire with the spare tire.
Then the Low Tire Pressure telltale may flash for approximately one minute and then remain continuously illuminated after restarting and about 20 minutes of continuous driving at speed above 15.5 mph (25 km/h) before you have the low pressure tire repaired and replaced on the vehicle. In winter or cold weather, the low tire pressure telltale may be illuminated if the tire pressure was adjusted to the recommended tire inflation pressure in warm weather. It does not mean your TPMS is malfunctioning because the decreased temperature leads to a proportional lowering of tire pressure.

When you drive your vehicle from a warm area to a cold area or from a cold area to a warm area, or the outside temperature is greatly higher or lower, you should check the tire inflation pressure and adjust the tires to the recommended tire inflation pressure.

**WARNING - Low pressure damage**

Do not drive on low pressure tires. Significantly low tire pressure can cause the tires to over-heat and fail making the vehicle unstable and resulting in increased braking distances and a loss of vehicle control.

The TPMS malfunction indicator will illuminate after it blinks for approximately one minute when there is a problem with the Tire Pressure Monitoring System. Have the system checked by an authorized Kia dealer as soon as possible to determine the cause of the problem.
What to do in an emergency

• The TPMS malfunction indicator may blink for approximately 1 minute and then remain continuously illuminated if the vehicle is moving around electric power supply cables or radios transmitters such as at police stations, government and public offices, broadcasting stations, military installations, airports, or transmitting towers, etc. This can interfere with normal operation of the Tire Pressure Monitoring System (TPMS).

• The TPMS malfunction indicator may blink for approximately 1 minute and then remain continuously illuminated if snow chains are used or some separate electronic devices such as notebook computer, mobile charger, remote starter or navigation etc., are used in the vehicle. This can interfere with normal operation of the Tire Pressure Monitoring System (TPMS).

Changing a tire with TPMS

If you have a flat tire, the Low Tire Pressure telltale will come on. Have the flat tire repaired by an authorized Kia dealer as soon as possible or replace the flat tire with the spare tire.

⚠️ CAUTION - Repair Agents

Never use a puncture-repairing agent not approved by Kia to repair and/or inflate a low pressure tire. The tire sealant not approved by Kia may damage the tire pressure sensor.

Each wheel is equipped with a tire pressure sensor mounted inside the tire behind the valve stem. You must use TPMS specific wheels. It is recommended that you always have your tires serviced by an authorized Kia dealer.

Even if you replace the low pressure tire with the spare tire, the Low Tire Pressure telltale will remain on until the low pressure tire is repaired and placed on the vehicle.

After you replace the low pressure tire with the spare tire, the TPMS malfunction indicator may illuminate after a few minutes because the TPMS sensor mounted on the spare wheel is not initiated.

Once the low pressure tire is re inflated to the recommended pressure and installed on the vehicle or the TPMS sensor mounted on the replaced spare wheel is initiated by an authorized Kia dealer, the TPMS malfunction indicator and the low tire pressure telltale will extinguish within a few minutes of driving.

If the indicator is not extinguished after a few minutes of driving, please visit an authorized Kia dealer.
If an original mounted tire is replaced with the spare tire, the TPMS sensor on the replaced spare wheel should be initiated and the TPMS sensor on the original mounted wheel should be deactivated. If the TPMS sensor on the original mounted wheel located in the spare tire carrier still activates, the tire pressure monitoring system may not operate properly. Have the tire with TPMS serviced or replaced by an authorized Kia dealer.

You may not be able to identify a low tire by simply looking at it. Always use a good quality tire pressure gauge to measure the tire's inflation pressure. Please note that a tire that is hot (from being driven) will have a higher pressure measurement than a tire that is cold (from sitting stationary for at least 3 hours and driven less than 1 mile (1.6 km) during that 3 hour period).

Allow the tire to cool before measuring the inflation pressure. Always be sure the tire is cold before inflating to the recommended pressure.

Do not use any tire sealant if your vehicle is equipped with a Tire Pressure Monitoring System. The liquid sealant can damage the tire pressure sensors.

- The TPMS cannot alert you to severe and sudden tire damage caused by external factors such as nails or road debris.
- If you feel any vehicle instability, immediately take your foot off the accelerator, apply the brakes gradually and with light force, and slowly move to a safe position off the road.

**NOTICE - Protecting TPMS**

Tampering with, modifying, or disabling the Tire Pressure Monitoring System (TPMS) components may interfere with the system's ability to warn the driver of low tire pressure conditions and/or TPMS malfunctions. Tampering with, modifying, or disabling the Tire Pressure Monitoring System (TPMS) components may void the warranty for that portion of the vehicle.
This device complies with Part 15 of the FCC rules.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.
IF YOU HAVE A FLAT TIRE (WITH SPARE TIRE, IF EQUIPPED)

Jack and tools

The jack, jack handle, wheel lug nut wrench are stored in the luggage compartment.

Pull up the luggage box cover to reach this equipment.

(1) Jack handle
(2) Jack
(3) Wheel lug nut wrench

Jacking instructions

The jack is provided for emergency tire changing only.

To prevent the jack from “rattling” while the vehicle is in motion, store it properly.

Follow jacking instructions to reduce the possibility of personal injury.

⚠️ WARNING - Tire Jack

Do not place any portion of your body under a vehicle that is only supported by a jack since the vehicle can easily roll off the jack. Use vehicle support stands.

⚠️ WARNING - Changing tires

Never attempt vehicle repairs in the traffic lanes of a public road or highway.

• Always move the vehicle completely off the road and onto the shoulder before trying to change a tire. The jack should be used on a firm level ground. If you cannot find a firm, level place off the road, call a towing service company for assistance.

• Be sure to use the correct front and rear jacking positions on the vehicle; never use the bumpers or any other part of the vehicle for jack support.

• Do not allow anyone to remain in the vehicle while it is on the jack.

• Make sure any children present are in a secure place away from the road and from the vehicle to be raised with the jack.
Removing and storing the spare tire

Turn the tire hold-down wing bolt counterclockwise.
Store the tire in the reverse order of removal.
To prevent the spare tire and tools from “rattling” while the vehicle is in motion, store them properly.

Changing tires

1. Park on a level surface and apply the parking brake firmly.
2. Place the transaxle shift lever in R (Reverse) with manual transaxle or P (Park) with automatic transaxle.
3. Activate the hazard warning flashers.

WARNING
- Running vehicle on jack
Do not start or run the engine of the vehicle while the vehicle is on the jack as this may cause the vehicle to fall off the jack.
What to do in an emergency

4. Remove the wheel lug nut wrench, jack, jack handle, and spare tire from the vehicle.
5. Block both the front and rear of the wheel that is diagonally opposite from the jack position.

**WARNING**
- Changing a tire
- To prevent vehicle movement while changing a tire, always set the parking brake fully, and always block the wheel diagonally opposite the wheel being changed.
- We recommend that the wheels of the vehicle be blocked, and that no person remain in a vehicle that is being jacked.

6. Loosen the wheel lug nuts counterclockwise one turn each, but do not remove any nut until the tire has been raised off the ground.
What to do in an emergency

7. Place the jack at the front (1) or rear (2) jacking position closest to the tire you are changing. Place the jack at the designated locations under the frame.

8. Insert the jack handle into the jack and turn it clockwise, raising the vehicle until the tire just clears the ground. This measurement is approximately 1 in. (30 mm).

Before removing the wheel lug nuts, make sure the vehicle is stable and that there is no chance for movement or slippage.

9. Loosen the wheel nuts and remove them with your fingers. Slide the wheel off the studs and lay it flat so it cannot roll away. To put the wheel on the hub, pick up the spare tire, line up the holes with the studs and slide the wheel onto them. If this is difficult, tip the wheel slightly and get the top hole in the wheel lined up with the top stud. Then jiggle the wheel back and forth until the wheel can slide over the other studs.

**WARNING - Jack location**

To reduce the possibility of injury, be sure to use only the jack provided with the vehicle in the correct jack position; never use any other part of the vehicle for jack support.
Wheels may have sharp edges. Handle them carefully to avoid possible severe injury. Before putting the wheel into place, be sure that there is nothing on the hub or wheel (such as mud, tar, gravel, etc.) that prevents the wheel from fitting solidly against the hub.

10. To install the wheel, hold it on the studs, put the wheel nuts on the studs and tighten them finger tight. Jiggle the tire to be sure it is completely seated, then tighten the nuts as much as possible with your fingers again.

11. Insert the wrench into the jack and lower the vehicle to the ground by turning the wheel nut wrench counterclockwise. Then position the wrench as shown in the drawing and tighten the wheel nuts. Be sure the socket is seated completely over the nut. Do not stand on the wrench handle or use an extension pipe over the wrench handle. Go around the wheel tightening every nut following the numerical sequence shown in the image until they are all tight. Then double-check each nut for tightness. After changing wheels, have an authorized Kia dealer tighten the wheel nuts to their proper torque as soon as possible.

**Wheel nut tightening torque:**
79 ~ 94 lb·ft (11 ~ 13 kg·m)
If you have a tire gauge, remove the valve cap and check the air pressure. If the pressure is lower than recommended, drive slowly to the nearest service station and inflate to the correct pressure. If it is too high, adjust it until it is correct. Always reinstall the valve cap after checking or adjusting the tire pressure. If the cap is not replaced, dust and dirt may get into the tire valve and air may leak from the tire. If you lose a valve cap, buy another and install it as soon as possible.

After you have changed the wheels, always secure the flat tire in its place and return the jack and tools to their proper storage locations.

⚠️ CAUTION - Reusing lug nuts

Make certain during wheel removal that the same nuts that were removed are reinstalled - or, if replaced, that nuts with metric threads and the same chamfer configuration are used. Your vehicle has metric threads on the wheel studs and nuts. Installation of a non-metric thread nut on a metric stud will not secure the wheel to the hub properly and will damage the stud so that it must be replaced.

⚠️ WARNING - Wheel studs

If the studs are damaged, they may lose their ability to retain the wheel. This could lead to the loss of the wheel and a collision.

To prevent the jack, jack handle, wheel lug nut wrench and spare tire from rattling while the vehicle is in motion, store them properly.

Check the inflation pressures as soon as possible after installing the spare tire. Adjust it to the specified pressure, if necessary. Refer to “Tires and wheels” in chapter 9.

Note that most lug nuts do not have metric threads. Be sure to use extreme care in checking for thread style before installing aftermarket lug nuts or wheels. If in doubt, consult an authorized Kia dealer.
Important - use of compact spare tire (if equipped)

Your vehicle is equipped with a compact spare tire. This compact spare tire takes up less space than a regular-size tire. This tire is smaller than a conventional tire and is designed for temporary use only.

- You should drive carefully when the compact spare is in use. The compact spare should be replaced by the proper conventional tire and rim at the first opportunity.
- The operation of this vehicle is not recommended with more than one compact spare tire in use at the same time.

⚠️ WARNING - Spare tire

Do not operate your vehicle on this compact spare at speeds over 50 mph (80 km/h). The compact spare tire is for emergency use only. The original tire should be repaired or replaced as soon as possible to avoid failure of the spare.

The compact spare should be inflated to 60 psi (420 kPa).

🌟 NOTICE

Check the inflation pressure after installing the spare tire. Adjust it to the specified pressure, as necessary.

When using a compact spare tire, observe the following precautions:

- Under no circumstances should you exceed 50 mph (80 km/h); a higher speed could damage the tire.
- Ensure that you drive slowly enough for the road conditions to avoid all hazards. Any road hazard, such as a pothole or debris, could seriously damage the compact spare.
- Any continuous road use of this tire could result in tire failure, loss of vehicle control, and possible personal injury.
- Do not exceed the vehicle’s maximum load rating or the load-carrying capacity shown on the sidewall of the compact spare tire.
Avoid driving over obstacles. The compact spare tire diameter is smaller than the diameter of a conventional tire and reduces the ground clearance approximately 1 inch (25 mm), which could result in damage to the vehicle.

Do not take this vehicle through an automatic vehicle wash while the compact spare tire is installed.

Do not use tire chains on the compact spare tire. Because of the smaller size, a tire chain will not fit properly. This could damage the vehicle and result in loss of the chain.

Do not use the compact spare tire on any other vehicle because this tire has been designed especially for your vehicle.

The compact spare tire's tread life is shorter than a regular tire. Inspect your compact spare tire regularly and replace worn compact spare tires with the same size and design, mounted on the same wheel.

The compact spare tire should not be used on any other wheels, nor should standard tires, snow tires, wheel covers or trim rings be used with the compact spare wheel. If such use is attempted, damage to these items or other vehicle components may occur.

Do not use more than one compact spare tire at a time.

Do not tow a trailer while the compact spare tire is installed.
What to do in an emergency

Jack label

1. Model Name
2. Maximum allowable load
3. When using the jack, set your parking brake.
4. When using the jack, stop the engine.
5. Do not get under a vehicle that is supported by a jack.
6. The designated locations under the frame
7. When supporting the vehicle, the base plate of jack must be vertical under the lifting point.
8. Shift into Reverse gear on vehicles with manual transmission or move the shift lever to the P position on vehicles with automatic transmission.
9. The jack should be used on firm level ground.
10. Jack manufacturer
11. Production date
12. Representative company and address

※ The actual Jack label in the vehicle may differ from the illustration. For more detailed specifications, refer to the label attached to the jack.
What to do in an emergency

**IF YOU HAVE A FLAT TIRE (TIRE MOBILITY KIT, IF EQUIPPED)**

For safe operation, carefully read and follow the instructions in this manual before use.

1. Compressor
2. Sealant bottle

The Tire Mobility Kit is a temporary fix to the tire and the tire should be inspected by an authorized Kia dealer as soon as possible.

When two or more tires are flat, do not use the tire mobility kit because the supported one sealant of Tire Mobility Kit is only used for one flat tire.

**WARNING - Tire wall**

Do not use the Tire Mobility Kit to repair punctures in the tire walls. This can result in an accident due to tire failure.

Have your tire repaired as soon as possible. The tire may lose air pressure at any time after inflating with the Tire Mobility Kit.

**Introduction**

With the Tire Mobility Kit you stay mobile even after experiencing a tire puncture.

The system of compressor and sealing compound effectively and comfortably seals most punctures in a passenger car tire caused by nails or similar objects and reinflates the tire.

After you ensured that the tire is properly sealed you can drive cautiously on the tire (distance up to 200 km (120 miles)) at a max. speed of (80 km/h) in order to reach a service station or tire dealer for the tire replacement.
It is possible that some tires, especially with larger punctures or damage to the sidewall, cannot be sealed completely. Air pressure loss in the tire may adversely affect tire performance. For this reason, you should avoid abrupt steering or other driving maneuvers, especially if the vehicle is heavily loaded or if a trailer is in use.

The Tire Mobility Kit is not designed or intended as a permanent tire repair method and is to be used for one tire only. This instruction shows you step by step how to temporarily seal the puncture simply and reliably. Read the section "Notes on the safe use of the Tire Mobility Kit".

**Notes on the suggested use of the Tire Mobility Kit**
- Park your car at the side of the road so that you can work with the Tire Mobility Kit away from moving traffic.
- To be sure your vehicle will not move, even when you're on fairly level ground, always set your parking brake.
- Only use the Tire Mobility Kit for sealing/inflation passenger car tires. Only punctured areas located within the tread region of the tire can be sealed using the tire mobility kit.
- Do not use on motorcycles, bicycles or any other type of tires.
- When the tire and wheel are damaged, do not use Tire Mobility Kit for your safety.
- Use of the Tire Mobility Kit may not be effective for tire damage larger than approximately 0.24 in (6 mm). Please contact the nearest Kia dealership if the tire cannot be made roadworthy with the Tire Mobility Kit.
- Do not use the Tire Mobility Kit if a tire is severely damaged by driving run flat or with insufficient air pressure.
- Do not remove any foreign objects such as nails or screws that have penetrated the tire.
- Provided the car is outdoors, leave the engine running. Otherwise operating the compressor may eventually drain the car battery.
- Never leave the Tire Mobility Kit unattended while it is being used.
- Do not leave the compressor running for more than 10 min. at a time or it may overheat.
- Do not use the Tire Mobility Kit if the ambient temperature is below -22°F (-30°C).
Components of the Tire Mobility Kit

1. Speed restriction label
2. Sealant bottle and label with speed restriction
3. Filling hose from sealant bottle to wheel
4. Connectors and cable for the power outlet direct connection
5. Holder for the sealant bottle
6. Compressor
7. On/off switch
8. Pressure gauge for displaying the tire inflation pressure
9. Screw cap for reducing tire inflation pressure
10. Hose to connect compressor and sealant bottle or compressor and wheel

Connectors, cable and connection hose are stored in the compressor housing.

⚠️ WARNING - Expired sealant
Do not use the Tire sealant after the sealant has expired (i.e. pasted the expiration date on the sealant container). This can increase the risk of tire failure.

⚠️ WARNING - Sealant
- Keep out of reach of children.
- Avoid contact with eyes.
- Do not swallow.

Strictly follow the specified sequence, otherwise the sealant may escape under high pressure.
Using the Tire Mobility Kit
1. Detach the speed restriction label (1) from the sealant bottle (2), and place it in a highly visible place inside the vehicle such as on the steering wheel to remind the driver not to drive too fast.

✽✽ NOTICE
Before using the tire repair kit, please read carefully the instruction attached on the sealant case. Detach the speed limit label on the sealant case and put it on a highly visible place. Always drive within the speed limit.

Carefully follow below steps.
2. Shake the sealant case.
3. Screw connection hose (10) onto the connector of the sealant bottle.
4. Ensure that screw cap (9) is closed.
5. Unscrew the valve cap from the valve of the defective wheel and screw filling hose (3) of the sealant bottle onto the valve.
6. Insert the sealant bottle into the housing (5) of the compressor so that the bottle is upright.
7. Ensure that the compressor is switched off, position 0.
8. Plug the compressor power cord into the front passenger side power outlet of the vehicle.

**WARNING**
If sealant is dispersed when the injection hose and tire air injection valve have not been fully connected, the sealant may overflow and clog the valve.

**NOTICE**
Only use the front passenger side power outlet when connecting the power cord.
What to do in an emergency

9. With the engine start/stop button position on or ignition switch position on, switch on the compressor and let it run for approximately 5~7 minutes to fill the sealant up to proper pressure. (refer to the Tire and Wheels, chapter 9). The inflation pressure of the tire after filling is unimportant and will be checked/corrected later.

Be careful not to overinflate the tire and stay away from the tire when filling it.

10. Switch off the compressor.

11. Detach the hoses from the sealant bottle connector and from the tire valve.

Return the Tire Mobility Kit to its storage location in the vehicle.

Distributing the sealant

12. Immediately drive approximately 4~6 miles (7~10 km or, about 10 min) to evenly distribute the sealant in the tire.

Do not exceed a speed of 50 mph (80 km/h). If possible, do not fall below a speed of 12 mph (20 km/h).

While driving, if you experience any unusual vibration, ride disturbance or noise, reduce your speed and drive with caution until you can safely pull off of the side of the road.

Call for road side service or towing.

When you use the Tire Mobility Kit, the tire pressure sensors and wheel may be stained by sealant.

Therefore, remove the tire pressure sensors and wheel stained by sealant and have it serviced by an authorized Kia dealer.

WARNING - Carbon monoxide
Do not leave your vehicle running in a poorly ventilated area for extended periods of time. Carbon monoxide poisoning and suffocation can occur.

WARNING - Tire pressure
Do not attempt to drive your vehicle if the tire pressure is below 29 PSI(200kpa). This could result in an accident due to sudden tire failure.
What to do in an emergency

Checking the tire inflation pressure
1. After driving approximately 4 ~ 6 miles (7 ~ 10 km or about 10 min), stop at a safe location.
2. Connect connection hose (10) of the compressor directly to the tire valve.
3. Plug the compressor power cord into the vehicle power outlet.
4. Adjust the tire inflation pressure to the recommended tire inflation.
   With the ignition switched on, proceed as follows.
   • To increase the inflation pressure: Switch on the compressor, position I. To check the current inflation pressure setting, briefly switch off the compressor.

**NOTICE**
The pressure gauge may show higher than actual reading when the compressor is running. To get an accurate tire pressure, the compressor needs to be turned off.

- To reduce the inflation pressure: Loosen the screw cap (9) on the compressor hose.

⚠️ CAUTION - Tire pressure sensor
When you use the Tire Mobility Kit including sealant not approved by Kia, the tire pressure sensors may be damaged by sealant. The sealant on the tire pressure sensor and wheel should be removed when you replace the tire with a new one and inspect the tire pressure sensors in authorized dealer.
Technical Data
System voltage: DC 12 V
Working voltage: DC 10 - 15 V
Amperage rating: max. 15 A
Suitable for use at temperatures:
  -22 ~ +158°F (-30 ~ +70°C)
Max. working pressure:
  87 psi (6 bar)
Size
Compressor: 6.7 x 5.9 x 2.4 in.
  (170 x 150 x 60 mm)
Sealant bottle: 3.3 x 2.8 ø in.
  (85 x 70 ø mm)
Compressor weight:
  1.77 lbs (0.8 kg)
Sealant volume:
  12.2 cu. in. (200 ml)
What to do in an emergency

TOWING
Towing service

For trailer towing guidelines information, refer to “Trailer towing” in chapter 6.

It is acceptable to tow the vehicle with the rear wheels on the ground (without dollies) and the front wheels off the ground.

If any of the loaded wheels or suspension components are damaged or the vehicle is being towed with the front wheels on the ground, use a towing dolly under the front wheels.

When being towed by a commercial tow truck and wheel dollies are not used, the front of the vehicle should always be lifted, not the rear.

If emergency towing is necessary, we recommend having it done by an authorized Kia dealer or a commercial tow-truck service. Proper lifting and towing procedures are necessary to prevent damage to the vehicle. The use of wheel dollies or flatbed is recommended.

⚠️ WARNING - Side and curtain air bag

If your vehicle is equipped with side and curtain air bag, set the ignition switch to LOCK or ACC position when the vehicle is being towed. The side and curtain air bag may deploy when the ignitions is ON, and the rollover sensor detects the situation as a rollover.
What to do in an emergency

When towing your vehicle in an emergency without wheel dollies:
1. Set the ignition switch in the ACC position.
2. Place the transaxle shift lever in N (Neutral).
3. Release the parking brake.

\[\text{\textbf{CAUTION}} - \text{Towing gear position}\]
 Failure to place the transaxle shift lever in N (Neutral) may cause internal damage to the transaxle.

\[\text{\textbf{CAUTION}} - \text{Towing}\]
- Do not tow the vehicle backwards with the front wheels on the ground as this may cause damage to the vehicle.
- Do not tow with sling-type equipment. Use wheel lift or flatbed equipment.

Removable towing hook (front) (if equipped)
1. Remove the towing hook from the tool case.
2. Remove the hole cover pressing the lower part of the cover on the front bumper.
3. Install the towing hook by turning it clockwise into the hole until it is fully secured.

4. Remove the towing hook and install the cover after use.

If towing is necessary, we recommend you to have it done by an authorized Kia dealer or a commercial tow truck service.

If towing service is not available in an emergency, your vehicle may be temporarily towed using a cable or chain secured to the emergency towing hook under the front (or rear) of the vehicle. Use extreme caution when towing the vehicle. A driver must be in the vehicle to steer it and operate the brakes.

Towing in this manner may be done only on hard-surfaced roads for a short distance and at low speeds. Also, the wheels, axles, power train, steering and brakes must all be in good condition.

- Do not use the tow hooks to pull a vehicle out of mud, sand or other conditions from which the vehicle cannot be driven out under its own power.
- Avoid towing a vehicle heavier than the vehicle doing the towing.
- The drivers of both vehicles should communicate with each other frequently.
What to do in an emergency

**CAUTION**

*Using a portion of the vehicle other than the tow hooks for towing may damage the body of your vehicle.*

- Attach a towing strap to the tow hook.
- Using a portion of the vehicle other than the tow hooks for towing may damage the body of your vehicle.
- Only use a cable or chain specifically intended for use in towing vehicles. Securely fasten the cable or chain to the towing hook provided.
- Before emergency towing, check that the hook is not broken or damaged.
- Fasten the towing cable or chain securely to the hook.
- Do not jerk the hook. Apply it steadily and with even force.
- To avoid damaging the hook, do not pull from the side or at a vertical angle. Always pull straight ahead.

**WARNING - Emergency Towing Precautions**

Use extreme caution when towing the vehicle.

- Avoid sudden starts or erratic driving maneuvers which would place excessive stress on the emergency towing hook and towing cable or chain. The hook and towing cable or chain may break and cause serious injury or damage.
- If the disabled vehicle is unable to be moved, do not forcibly continue the towing. We recommend that you contact an authorized Kia dealer or a commercial tow truck service for assistance.
- Tow the vehicle as straight ahead as possible.
- Keep away from the vehicle during towing.

- Use a towing strap less than 16 feet (5 m) long. Attach a white or red cloth (about 12 inches (30 cm) wide) in the middle of the strap for easy visibility.
- Drive carefully so that the towing strap is not loose during towing.
What to do in an emergency

**Emergency towing precautions**
- Turn the ignition switch to ACC so the steering wheel isn’t locked.
- Place the transaxle shift lever in N (Neutral).
- Release the parking brake.
- Press the brake pedal with more force than usual since you will have reduced brake performance.
- More steering effort will be required because the power steering system will be disabled.
- If you are driving down a long hill, the brakes may overheat and brake performance will be reduced. Stop often and let the brakes cool off.
- If the car is being towed with all four wheels on the ground, it can be towed only from the front. Be sure that the transaxle is in neutral. Be sure the steering is unlocked by placing the ignition switch in the ACC position. A driver must be in the towed vehicle to operate the steering and brakes.

⚠️ **CAUTION - Automatic transaxle**
To avoid serious damage to the automatic transaxle, limit the vehicle speed to 10 mph (15 km/h) and drive less than 1 mile (1.5 km) when towing.

⋆ **NOTICE**
Before towing, check the automatic transaxle for fluid leaks under your vehicle. If the automatic transaxle fluid is leaking, a flatbed equipment or towing dolly must be used.

MAINTENANCE SERVICES

You should exercise the utmost care to prevent damage to your vehicle and injury to yourself whenever performing any maintenance or inspection procedures.

Should you have any doubts concerning the inspection or servicing of your vehicle, we strongly recommend that you have an authorized Kia dealer perform this work.

An authorized Kia dealer has factory trained technicians and genuine Kia parts to service your vehicle properly. For expert advice and quality service, see an authorized Kia dealer.

Inadequate, incomplete or insufficient servicing may result in operational problems with your vehicle that could lead to vehicle damage, an accident, or personal injury.

Owner’s responsibility

* NOTICE

Maintenance Service and Record Retention are the owner’s responsibility. You should retain documents that show proper maintenance has been performed on your vehicle in accordance with the scheduled maintenance service charts shown on the following pages. You need this information to establish your compliance with the servicing and maintenance requirements of your vehicle warranties.

Detailed warranty information is provided in your Warranty & Consumer Information manual.

Repairs and adjustments required as a result of improper maintenance or a lack of required maintenance are not covered.

We recommend you have your vehicle maintained and repaired by an authorized Kia dealer. An authorized Kia dealer meets Kia’s high service quality standards and receives technical support from Kia in order to provide you with a high level of service satisfaction.
NOTICE - NHTSA Safety Corrosion Alert

The National Highway Traffic Safety Administration (NHTSA) has issued a general warning to all vehicle owners of all brands regarding the risks associated with vehicle underbody corrosion. From your initial purchase, take the following steps to prevent unsafe corrosion damage to your vehicle:

- Wash the undercarriage of your vehicle regularly during the winter and whenever your vehicle has been exposed to salts or chemicals.
- Do a thorough washing of the undercarriage at the end of the winter.
- Use professional service technicians or governmental inspection stations to annually inspect for corrosion.

(Continued)

- Immediately seek an inspection of your vehicle if you become visually aware of corrosion flaking or scaling or if you become aware of a change in vehicle performance, such as soft or spongy brakes, fluids leaking, impairment of directional control, suspension noises or rattling metal straps.

NHTSA further advises that after a vehicle is 7 years old, it is essential that you take these indicated maintenance steps to ensure that you protect yourself from unsafe corrosion conditions.

Owner maintenance precautions

Improper or incomplete service may result in problems. This section gives instructions only for the maintenance items that are easy to perform.

As explained earlier in this section, several procedures can be done only by an authorized Kia dealer with special tools.

NOTICE

Improper owner maintenance during the warranty period may affect warranty coverage. For details, read the separate Warranty & Consumer Information manual provided with the vehicle. If you're unsure about any servicing or maintenance procedure, have it done by an authorized Kia dealer.
**WARNING - Maintenance work**

Do not wear jewelry or loose clothing while working under the hood of your vehicle with the engine running. These can become entangled in moving parts, if you must run the engine while working under the hood, make certain that you remove all jewelry (especially rings, bracelets, watches, and necklaces) and all neckties, scarves, and similar loose clothing before getting near the engine or cooling fans.
OWNER MAINTENANCE

The following lists are vehicle checks and inspections that should be performed by the owner or an authorized Kia dealer at the frequencies indicated to help ensure safe, dependable operation of your vehicle.

Any adverse conditions should be brought to the attention of your dealer as soon as possible.

These Owner Maintenance Checks are generally not covered by warranties and you may be charged for labor, parts and lubricants used.

Owner maintenance schedule

*When you stop for fuel:*
- Check the engine oil level.
- Check the coolant level in the coolant reservoir.
- Check the windshield washer fluid level.
- Look for low or under-inflated tires.
- Check if the front of the radiator and condenser are clean and not blocked with leaves, dirt or insects etc. If any of the above parts are extremely dirty or you are not sure of their condition, take your vehicle to an authorized Kia dealer.

*While operating your vehicle:*
- Note any changes in the sound of the exhaust or any smell of exhaust fumes in the vehicle.
- Check for vibrations in the steering wheel. Notice any increased steering effort or looseness in the steering wheel, or change in its straight-ahead position.
- Notice if your vehicle constantly turns slightly or “pulls” to one side when traveling on smooth, level roads.
- When stopping, listen and check for unusual sounds, pulling to one side, increased brake pedal travel or “hard-to-push” brake pedal.
- If any slipping or changes in the operation of your transaxle occurs, check the transaxle fluid level.
- Check the automatic transaxle P (Park) function.
- Check the parking brake.
- Check for fluid leaks under your vehicle (water dripping from the air conditioning system during or after use is normal).

**WARNING - Hot coolant**

Be careful when checking your engine coolant level when the engine is hot. Scalding hot coolant and steam may blow out under pressure.
At least monthly:
- Check the coolant level in the engine coolant reservoir.
- Check the operation of all exterior lights, including the stoplights, turn signals and hazard warning flashers.
- Check the inflation pressures of all tires including the spare.

At least twice a year (i.e., every Spring and Fall):
- Check the radiator, heater and air conditioning hoses for leaks or damage.
- Check the windshield washer spray and wiper operation. Clean the wiper blades with clean cloth dampened with washer fluid.
- Check the headlight alignment.
- Check the muffler, exhaust pipes, shields and clamps.
- Check the lap/shoulder belts for wear and function.
- Check for worn tires and loose wheel lug nuts.

At least once a year:
- Clean the body and door drain holes.
- Lubricate the door hinges and checks, and hood hinges.
- Lubricate the door and hood locks and latches.
- Lubricate the door rubber weatherstrips.
- Check the air conditioning system.
- Inspect and lubricate the automatic transaxle linkage and controls.
- Clean the battery and terminals.
- Check the brake fluid level.
SCHEDULED MAINTENANCE SERVICE

Follow the Normal Maintenance Schedule if the vehicle is usually operated where none of the following conditions apply. If any of the following conditions apply, follow the Maintenance Under Severe Usage Conditions.

- Repeated driving short distance of less than 5 miles (8 km) in normal temperature or less than 10 miles (16 km) in freezing temperature
- Extensive engine idling or low speed driving for long distances
- Driving on rough, dusty, muddy, unpaved, graveled or salt-spread roads
- Driving in areas using salt or other corrosive materials or in very cold weather
- Driving in heavy dust conditions
- Driving in heavy traffic areas
- Driving on uphill, downhill, or mountain roads repeatedly
- Towing a trailer or using a camper, or roof rack
- Driving as a patrol car, taxi, other commercial use of vehicle towing
- Driving over 106 mile/h (170 km/h)
- Frequently driving in stop-and-go conditions

If your vehicle is operated under the above conditions, you should inspect, replace or refill more frequently than the following Normal Maintenance Schedule. After 120 months or 150,000 miles continue to follow the prescribed maintenance intervals.
NORMAL MAINTENANCE SCHEDULE

The following maintenance services must be performed to ensure good emission control and performance. Keep receipts for all vehicle emission services to protect your warranty. Where both mileage and time are shown, the frequency of service is determined by whichever occurs first.

*1 Inspect "Water Pump" when replacing the drive belt or timing belt.

*2 Fuel tank air filter is considered to be maintenance free but periodic inspection is recommended for this maintenance schedule depends on fuel quality.

*3 Inspect for excessive tappet noise and/or engine vibration and adjust if necessary.

*4 The drive belt should be replaced when cracks occur or tension is reduced excessively.

*5 When replacing coolant, use only a qualified coolant additive for your vehicle and never mix hard water in the coolant filled at the factory. An improper coolant mixture can result in serious malfunction or engine damage.

*6 If TOP TIER Detergent Gasoline is not available, one bottle of additive is recommended. Additives are available from your authorized Kia dealer along with information on how to use them. Do not mix other additives.
Normal Maintenance Schedule - Non Turbo Models

The following maintenance services must be performed to ensure good emission control and performance. Keep receipts for all vehicle emission services to protect your warranty. Where both mileage and time are shown, the frequency of service is determined by whichever occurs first.

*4 : Fuel tank air filter are considered to be maintenance free but periodic inspection is recommended for this maintenance schedule depends on fuel quality.
MAINTENANCE UNDER SEVERE USAGE CONDITIONS

The following items must be serviced more frequently on cars normally used under severe driving conditions. Refer to the chart below for the appropriate maintenance intervals.

R : Replace
I : Inspect and, after inspection, clean, adjust, repair or replace if necessary

SEVERE DRIVING CONDITIONS
A - Repeatedly driving short distance of less than 5 miles in normal temperature or less than 10 miles in freezing temperature
B - Extensive engine idling or low speed driving for long distances
C - Driving on rough, dusty, muddy, unpaved, graveled or salt-spread roads
D - Driving in areas using salt or other corrosive materials or in very cold weather
E - Driving in heavy dust condition
F - Driving in heavy traffic area
G - Driving on uphill, downhill, or mountain road
H - Towing a Trailer, or using a camper, or roof rack
I - Driving as a patrol car, taxi, other commercial use or vehicle towing
J - Driving over 106 MPH
K - Frequently driving in stop-and-go conditions
EXPLANATION OF SCHEDULED MAINTENANCE ITEMS

Engine oil and filter
The engine oil and filter should be changed at the intervals specified in the maintenance schedule. If the vehicle is being driven in severe conditions, more frequent oil and filter changes are required.

Drive belts
Inspect all drive belts for evidence of cuts, cracks, excessive wear or oil saturation and replace if necessary. Drive belts should be checked periodically for proper tension and adjusted as necessary.

Fuel filter (for gasoline)
Kia gasoline vehicle is equipped with a lifetime fuel filter that is integrated with the fuel tank. Regular maintenance or replacement is generally not needed. This may vary depending on fuel quality. If you experience any of the following: fuel flow restriction, surging, loss of power, or a hard starting issue, inspection and, if necessary, replacement may be needed. Have the fuel filter inspected or replaced by an authorized Kia dealer.

Fuel lines, fuel hoses and connections
Check the fuel lines, fuel hoses and connections for leakage and damage. Have an authorized Kia dealer replace any damaged or leaking parts immediately.

Vapor hose and fuel filler cap
The vapor hose and fuel filler cap should be inspected at those intervals specified in the maintenance schedule. Make sure that a new vapor hose or fuel filler cap is correctly replaced.
**Vacuum crankcase ventilation hoses (if equipped)**

Inspect the surface of hoses for evidence of heat and/or mechanical damage. Hard and brittle rubber, cracking, tears, cuts, abrasions, and excessive swelling indicate deterioration. Particular attention should be paid to examine those hose surfaces nearest to high heat sources, such as the exhaust manifold.

Inspect the hose routing to assure that the hoses do not come in contact with any heat source, sharp edges or moving components which might cause heat damage or mechanical wear. Inspect all hose connections, such as clamps and couplings, to make sure they are secure, and that no leaks are present. Hoses should be replaced immediately if there is any evidence of deterioration or damage.

**Air cleaner filter**

A Genuine Kia air cleaner filter is recommended when the filter is replaced.

**Spark plugs**

Make sure to install new spark plugs of the correct heat range.

**Valve clearance (if equipped)**

Inspect for excessive valve noise and/or engine vibration and adjust if necessary. An authorized Kia dealer should perform the operation.

**Cooling system**

Check the cooling system components, such as the radiator, coolant reservoir, hoses and connections for leakage and damage. Replace any damaged parts.

**Coolant**

The coolant should be changed at the intervals specified in the maintenance schedule.
Maintenance

Manual transaxle fluid (if equipped)
Inspect the manual transaxle fluid according to the maintenance schedule.

Automatic transaxle fluid (if equipped)
Automatic transaxle fluid should not be checked under normal usage conditions.
But in severe conditions, the fluid should be changed at an authorized Kia dealer in accordance to the scheduled maintenance at the beginning of this section.

* NOTICE
Automatic transaxle fluid color is reddish.
As the vehicle is driven, the automatic transaxle fluid will begin to look darker.
It is the normal condition and you should not judge the need to replace the fluid based upon the changed color.

⚠️ CAUTION - Transaxle fluids
The use of a non-specified fluid could result in transaxle malfunction and failure.
Use only specified automatic transaxle fluid. (Refer to “Recommended lubricants and capacities” in chapter 9.)

Dual clutch transmission Fluid
Inspect the dual clutch transmission fluid according to the maintenance schedule.

Brake hoses and lines
Visually check for proper installation, chafing, cracks, deterioration and any leakage. Replace any deteriorated or damaged parts immediately.

* NOTICE - NHTSA Safety Corrosion Alert
NHTSA has warned all vehicle owners of all brands that they must maintain their vehicles in a manner which will prevent brake hose and brake line failures due to corrosion when such vehicles are exposed to winter road salt and related chemicals. While serious corrosion conditions typically only manifest themselves as safety issues after 7 years of vehicle use, the corrosion process starts immediately and thus underbody cleaning maintenance must commence from your vehicle's first exposure to road salts and chemicals. NHTSA urges vehicle owners to take the following steps to prevent corrosion:

(Continued)
Maintenance

(Continued)

1. Wash the undercarriage of your vehicle regularly throughout the winter and do a thorough washing in the spring to remove road salt and other de-icing chemicals.

2. Monitor the brake system for signs of corrosion by having regular professional inspections and watching for signs of problems, including loss of brake fluid, unusual leaks and soft or spongy feel in the brake pedal.

3. Replace the entire brake pipe assembly if you find severe corrosion that causes scaling or flaking of brake components.

**Brake/clutch (if equipped) fluid**

Check the brake fluid level in the brake fluid reservoir. The level should be between “MIN” and “MAX” marks on the side of the reservoir. Use only hydraulic brake fluid conforming to DOT 3 or DOT 4 specification.

**Brake discs, pads, calipers and rotors**

Check the pads for excessive wear, discs for run out and wear, and calipers for fluid leakage.

**Exhaust pipe and muffler**

Visually inspect the exhaust pipes, muffler and hangers for cracks, deterioration, or damage. Start the engine and listen carefully for any exhaust gas leakage. Tighten connections or replace parts as necessary.

**Parking brake**

Inspect the parking brake system including the parking brake lever (or pedal) and cables.
**Suspension mounting bolts**
Check the suspension connections for looseness or damage. Retighten to the specified torque.

**Steering gear box, linkage & boots/lower arm ball joint**
With the vehicle stopped and engine off, check for excessive free-play in the steering wheel.
Check the linkage for bends or damage. Check the dust boots and ball joints for deterioration, cracks, or damage. Replace any damaged parts.

**Drive shafts and boots**
Check the drive shafts, boots and clamps for cracks, deterioration, or damage. Replace any damaged parts and, if necessary, repack the grease.

**Air conditioning refrigerant**
Check the air conditioning lines and connections for leakage and damage.
CHECKING FLUID LEVELS

When checking engine oil, engine coolant, brake fluid, and washer fluid, always be sure to clean the area around any filler plug, drain plug, or dipstick before checking or draining any lubricant or fluid. This is especially important in dusty or sandy areas and when the vehicle is used on unpaved roads. Cleaning the plug and dipstick areas will prevent dirt and grit from entering the engine and other mechanisms that could be damaged.
ENGINE OIL
Checking the engine oil level

1. Be sure the vehicle is on level ground.
2. Start the engine and allow it to reach normal operating temperature.
3. Turn the engine off and wait for a few minutes (about 5 minutes) for the oil to return to the oil pan.
4. Pull the dipstick out, wipe it clean, and re-insert it fully.

5. Pull the dipstick out again and check the level. The level should be between F and L.

⚠️ CAUTION - Replacing engine oil

Do not overfill the engine oil. It may damage the engine.

’à NOTICE - Replacing engine oil

• Do not spill engine oil, when adding or changing engine oil. If you drop the engine oil on the engine room, wipe it off immediately.

⚠️ WARNING - Radiator hose
Be very careful not to touch the radiator hose when checking or adding the engine oil as it may be hot enough to burn you.
Maintenance

If it is near or at L, add enough oil to bring the level to F. **Do not overfill.**

**Use a funnel to help prevent oil from being spilled on engine components.**

*Use only the specified engine oil. (Refer to “Recommended lubricants and capacities” in chapter 9.)*

**Changing the engine oil and filter**

Have engine oil and filter changed by an authorized Kia dealer according to the Maintenance Schedule at the beginning of this chapter.

**CALIFORNIA PROPOSITION 65 WARNING**

Engine oil contains chemicals known to the State of California to cause cancer, birth defects and reproductive harm. Used engine oil may cause irritation or cancer of the skin if left in contact with the skin for prolonged periods of time. Always protect your skin by washing your hands thoroughly with soap and warm water as soon as possible after handling used oil.
ENGINE COOLANT
The high-pressure cooling system has a reservoir filled with year round antifreeze coolant. The reservoir is filled at the factory.
Check the antifreeze protection and coolant level at least once a year, at the beginning of the winter season, and before traveling to a colder climate.

Checking the coolant level

⚠️ CAUTION - Radiator Cap
Never attempt to remove the radiator cap while the engine is operating or hot. Doing so might lead to cooling system and engine damage.

Turn the engine off and wait until it cools down. Use extreme care when removing the radiator cap. Wrap a thick towel around it, and turn it counterclockwise slowly to the first stop. Step back while the pressure is released from the cooling system.
When you are sure all the pressure has been released, press down on the cap, using a thick towel, and continue turning counterclockwise to remove it.

⚠️ WARNING - Cooling fan
Use caution when working near the blade of the cooling fan. The electric motor (cooling fan) is controlled by engine coolant temperature, refrigerant pressure and vehicle speed. It may sometimes operate even when the engine is not running.
Check the condition and connections of all cooling system hoses and heater hoses. Replace any swollen or deteriorated hoses. The coolant level should be filled between F and L marks on the side of the coolant reservoir when the engine is cool.

If the coolant level is low, add enough specified coolant to provide protection against freezing and corrosion. Bring the level to F, but do not overfill. If frequent additions are required, see an authorized Kia dealer for a cooling system inspection.

**Recommended engine coolant**
- When adding coolant, use only deionized water or soft water for your vehicle and never mix hard water in the coolant filled at the factory. An improper coolant mixture can result in serious malfunction or engine damage.
- The engine in your vehicle has aluminum engine parts and must be protected by an ethylene-glycol with phosphate based coolant to prevent corrosion and freezing.
- DO NOT USE alcohol or methanol coolant or mix them with the specified coolant.
- Do not use a solution that contains more than 60% antifreeze or less than 35% antifreeze, which would reduce the effectiveness of the solution.
For mixture percentage, refer to the following table.

<table>
<thead>
<tr>
<th>Ambient Temperature</th>
<th>Mixture Percentage (volume)</th>
<th>Antifreeze</th>
<th>Water</th>
</tr>
</thead>
<tbody>
<tr>

<td>50</td>
<td></td>
</tr>
<tr>
<td>-49°F (-45°C)</td>
<td>60</td>
<td>40</td>
<td></td>
</tr>
</tbody>
</table>

**Changing the coolant**

Have the coolant changed by an authorized Kia dealer according to the Maintenance Schedule at the beginning of this chapter. Put a thick cloth around the radiator cap before refilling the coolant in order to prevent the coolant from overflowing into engine parts such as the alternator.

**WARNING**

Radiator cap

Do not remove the radiator cap when the engine and radiator are hot. Scalding hot coolant and steam may blow out under pressure which may result in serious injury.
BRAKE/CLUTCH FLUID

Checking the brake/clutch* fluid level

Check the fluid level in the reservoir periodically. The fluid level should be between MAX and MIN marks on the side of the reservoir. Before removing the reservoir cap and adding brake/clutch* fluid, clean the area around the reservoir cap thoroughly to prevent brake/clutch* fluid contamination.

* if equipped

⚠️ CAUTION - Proper fluid

*Only use brake fluid in brake system. Small amounts of improper fluids (such as engine oil) can cause damage to the brake system.*

If the level is low, add fluid to the MAX level. The level will fall with accumulated mileage. This is a normal condition associated with the wear of the brake linings and/or clutch disc (if equipped). If the fluid level is excessively low, have the brake/clutch* system checked by an authorized Kia dealer.

Use only the specified brake/clutch* fluid. (Refer to “Recommended lubricants and capacities” in chapter 9.)

Never mix different types of fluid.

In the event the brake/clutch* system requires frequent additions of fluid, the vehicle should be inspected by an authorized Kia dealer.

When changing and adding brake/clutch* fluid, handle it carefully. Do not let it come in contact with your eyes. If brake/clutch* fluid should come in contact with your eyes, immediately flush them with a large quantity of fresh tap water. Have your eyes examined by a doctor as soon as possible.
Brake/clutch* fluid, which has been exposed to open air for an extended time should never be used as its quality cannot be guaranteed. It should be disposed of properly.
WASHER FLUID

Checking the washer fluid level

The reservoir is translucent so that you can check the level with a quick visual inspection.

Check the fluid level in the washer fluid reservoir and add fluid if necessary. Plain water may be used if washer fluid is not available. However, use washer solvent with antifreeze characteristics in cold climates to prevent freezing.

**WARNING - Flammable Fluid**

Do not allow the washer fluid to come in contact with open flames or sparks. The windshield washer fluid reservoir is flammable under certain circumstances. This can result in a fire.

**WARNING - Coolant**

- Do not use radiator coolant or antifreeze in the washer fluid reservoir.
- Radiator coolant can severely obscure visibility when sprayed on the windshield and may cause loss of vehicle control.

**WARNING - Windshield fluid**

Do not drink the windshield washer fluid. The windshield washer fluid is poisonous to humans and animals.
PARKING BRAKE
Checking the parking brake

Check the stroke of the parking brake by counting the number of “clicks” heard while fully applying it from the released position. Also, the parking brake alone should securely hold the vehicle on a fairly steep grade. If the stroke is more or less than specified, have the parking brake adjusted by an authorized Kia dealer.

Stroke: 6~8 “clicks” at a force of 44 lbs (20 kg, 196 N).

AIR CLEANER
Filter replacement

It must be replaced when necessary, and should not be washed. You can clean the filter when inspecting the air cleaner element. Clean the filter by using compressed air.

1. Loosen the air cleaner cover attaching clips and open the cover.
2. Wipe the inside of the air cleaner.
3. Replace the air cleaner filter.
4. Lock the cover with the cover attaching clips.

Replace the filter according to the Maintenance Schedule.
If the vehicle is operated in extremely dusty or sandy areas, replace the element more often than the usual recommended intervals. (Refer to “Maintenance under severe usage conditions” in this chapter.)

⚠️ CAUTION - Air filter maintenance
- **Do not drive with the air cleaner removed; this will result in excessive engine wear.**
- **When removing the air cleaner filter, be careful that dust or dirt does not enter the air intake, or damage may result.**
- **Use a Kia genuine part. Use of non-genuine parts could damage the air flow sensor.**
CLIMATE CONTROL AIR FILTER (IF EQUIPPED)

Filter inspection
The climate control air filter should be replaced according to the maintenance schedule. If the vehicle is operated in severely air-polluted cities or on dusty rough roads for a long period, it should be inspected more frequently and replaced earlier. When you replace the climate control air filter, replace it performing the following procedure, and be careful to avoid damaging other components.

Filter replacement
1. Open the glove box.
2. With the glove box open, remove the Air filter cover.
3. Remove the climate control air filter case by pulling out both sides of the cover.

4. Replace the climate control air filter.

5. Reassemble in the reverse order of disassembly.

When replacing the climate control air filter install it properly. Otherwise, the system may produce noise and the effectiveness of the filter may be reduced.
Commercial hot waxes applied by automatic vehicle washes have been known to make the windshield difficult to clean.

Contamination of either the windshield or the wiper blades with foreign matter can reduce the effectiveness of the windshield wipers. Common sources of contamination are insects, tree sap, and hot wax treatments used by some commercial vehicle washes. If the blades are not wiping properly, clean both the window and the blades with a good cleaner or mild detergent, and rinse thoroughly with clean water.

**Blade replacement**

When the wipers no longer clean adequately, the blades may be worn or cracked, and require replacement. To prevent damage to the wiper arms or other components, do not attempt to move the wipers manually. The use of a non-specified wiper blade could result in wiper malfunction and failure.
Front windshield wiper blade

Type A
1. Raise the wiper arm and turn the wiper blade assembly to expose the plastic locking clip.

⚠️ **CAUTION - Wiper arms**
*Do not allow the wiper arm to fall against the windshield, since it may chip or crack the windshield.*

2. Compress the clip and slide the blade assembly downward.
3. Lift it off the arm.
4. Install the blade assembly in the reverse order of removal.

Type B
1. Raise the wiper arm.

⚠️ **CAUTION - Wiper arms**
*Do not allow the wiper arm to fall against the windshield, since it may chip or crack the windshield.*
2. Lift up the wiper blade clip. Then pull down the blade assembly and remove it.

3. Install the new blade assembly in the reverse order of removal.

Rear window wiper blade

1. Raise the wiper arm and pull out the wiper blade assembly.
2. Install the new blade assembly by inserting the center part into the slot in the wiper arm until it clicks into place.

3. Make sure the blade assembly is installed firmly by trying to pull it slightly.

To prevent damage to the wiper arms or other components, have an authorized Kia dealer replace the wiper blade.
BATTERY
For best battery service

- Keep the battery securely mounted.
- Keep the battery top clean and dry.
- Keep the terminals and connections clean, tight, and coated with petroleum jelly or terminal grease.
- Rinse any spilled electrolyte from the battery immediately with a solution of water and baking soda.
- If the vehicle is not going to be used for an extended time, disconnect the battery cables.

**WARNING - Risk of explosion**
Keep lit cigarettes and all other flames or sparks away from the battery. The battery contains hydrogen -- a highly combustible gas which will explode if it comes in contact with a flame or spark.

**WARNING - Sulfuric acid in batteries**
Keep batteries out of the reach of children because batteries contain highly corrosive SULFURIC ACID and electrolytes. Do not allow battery acid to contact your skin, eyes, clothing or paint finish. Wear eye protection when charging or working near a battery. Always provide ventilation when working in an enclosed space.
Always read the following instructions carefully when handling a battery.

If any electrolyte gets into your eyes, flush your eyes with clean water for at least 15 minutes and get immediate medical attention.

If electrolyte gets on your skin, thoroughly wash the contacted area. If you feel pain or burning sensation, get medical attention immediately.

An inappropriately disposed battery can be harmful to the environment and human health. Dispose the battery according to your local law(s) or regulation.

Never attempt to recharge the battery when the battery cables are connected.

**NOTICE**

If you connect unauthorized electronic devices to the battery, the battery may be discharged. Never use unauthorized devices.

**WARNING - Risk of electrocution**

Never touch the electrical ignition system while the vehicle is running. This system works with high voltage which can "zap" you.

**WARNING - Recharging battery**

Never attempt to recharge the battery when the battery cables are connected.

**CALIFORNIA PROPOSITION 65 WARNING**

Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer, birth defects and reproductive harm. Batteries also contain other chemicals known to the State of California to cause cancer. Wash hands after handling.

**Battery recharging**

Your vehicle has a maintenance-free, calcium-based battery.

- If the battery becomes discharged in a short time (because, for example, the headlights or interior lights were left on while the vehicle was not in use), recharge it by slow charging (trickle) for 10 hours.
- If the battery gradually discharges because of high electric load while the vehicle is being used, recharge it at 20-30A for two hours.
When recharging the battery, observe the following precautions:

- The battery must be removed from the vehicle and placed in an area with good ventilation.
- Do not allow cigarettes, sparks, or flame near the battery.
- Watch the battery during charging, and stop or reduce the charging rate if the battery cells begin gassing (boiling) violently or if the temperature of the electrolyte of any cell exceeds 120°F (49°C).
- Wear eye protection when checking the battery during charging.
- Disconnect the battery charger in the following order.

1. Turn off the battery charger main switch.
2. Unhook the negative clamp from the negative battery terminal.
3. Unhook the positive clamp from the positive battery terminal.

Before performing maintenance or recharging the battery, turn off all accessories and stop the engine.

The negative battery cable must be removed first and installed last when the battery is disconnected.

Reset items

Items should be reset after the battery has been discharged or the battery has been disconnected.

- Auto up/down window (See chapter 4)
- Sunroof (See chapter 4)
- Trip computer (See chapter 4)
- Climate control system (See chapter 4)
- Clock (See chapter 4)
- Audio (See chapter 5)
TIRES AND WHEELS

Tire care
For proper maintenance, safety, and maximum fuel economy, you must always maintain recommended tire inflation pressures and stay within the load limits and weight distribution recommended for your vehicle.

Recommended cold tire inflation pressures
All tire pressures (including the spare) should be checked when the tires are cold. “Cold Tires” means the vehicle has not been driven for at least three hours or driven less than one mile (1.6 km).
Recommended pressures must be maintained for the best ride, vehicle handling, and minimum tire wear.
For recommended inflation pressure, refer to “Tire and wheels” in chapter 9.

WARNING - Tire under inflation
Inflate your tire consistent with the instructions provided in this manual. Severe under inflation can lead to severe heat build-up, causing blowouts, tread separation and other tire failures that can result in the loss of vehicle control. This risk is much higher on hot days and when driving for long periods at high speeds.
• Underinflation also results in excessive wear, poor handling and reduced fuel economy. Wheel deformation also is possible. Keep your tire pressures at the proper levels. If a tire frequently needs refilling, have it checked by an authorized Kia dealer.

• Overinflation produces a harsh ride, excessive wear at the center of the tire tread, and a greater possibility of damage from road hazards.

• Warm tires normally exceed recommended cold tire pressures by 4 to 6 psi (28 to 41 kPa). Do not release air from warm tires to adjust the pressure or the tires will be underinflated.

• Be sure to reinstall the tire inflation valve caps. Without the valve cap, dirt or moisture could get into the valve core and cause air leakage. If a valve cap is missing, install a new one as soon as possible.

Always observe the following:
• Check tire pressure when the tires are cold. (After vehicle has been parked for at least three hours or hasn't been driven more than one mile (1.6 km) since startup.)
• Check the pressure of your spare tire each time you check the pressure of other tires.
• Never overload your vehicle. Be careful not to overload a vehicle luggage rack if your vehicle is equipped with one.

**WARNING - Tire inflation**
Overinflation or underinflation can reduce tire life, adversely affect vehicle handling, and lead to sudden tire failure. This could result in loss of vehicle control and potential injury.

**Checking tire inflation pressure**
Check your tires once a month or more. Also, check the tire pressure of the spare tire.

**How to check**
Use a good quality gauge to check tire pressure. You cannot tell if your tires are properly inflated simply by looking at them. Radial tires may look properly inflated even when they're underinflated. Check the tire's inflation pressure when the tires are cold. - "Cold" means your vehicle has been sitting for at least three hours or driven no more than 1 mile (1.6 km).
Remove the valve cap from the tire valve stem. Press the tire gauge firmly onto the valve to get a pressure measurement. If the cold tire inflation pressure matches the recommended pressure on the tire and loading information label, no further adjustment is necessary. If the pressure is low, add air until you reach the recommended amount.

If you overfill the tire, release air by pushing on the metal stem in the center of the tire valve. Recheck the tire pressure with the tire gauge. Be sure to put the valve caps back on the valve stems. They help prevent leaks by keeping out dirt and moisture.

- Inspect your tires frequently for proper inflation as well as wear and damage. Always use a tire pressure gauge.
- Tires with too much or too little pressure wear unevenly causing poor handling, loss of vehicle control, and sudden tire failure leading to accidents, injuries, and even death. The recommended cold tire pressure for your vehicle can be found in this manual and on the tire label located on the driver's side center pillar.
- Remember to check the pressure of your spare tire. Kia recommends that you check the spare every time you check the pressure of the other tires on your vehicle.

Tire rotation
To equalize tread wear, it is recommended that the tires be rotated every 7,500 miles (12,000 km) or sooner if irregular wear develops.

During rotation, check the tires for correct balance.

When rotating tires, check for uneven wear and damage. Abnormal wear is usually caused by incorrect tire pressure, improper wheel alignment, out-of-balance wheels, severe braking or severe cornering. Look for bumps or bulges in the tread or side of tire. Replace the tire if you find either of these conditions. Replace the tire if fabric or cord is visible. After rotation, be sure to bring the front and rear tire pressures to specification and check lug nut tightness.

Refer to “Tire and wheels” in chapter 9.
Disc brake pads should be inspected for wear whenever tires are rotated.

Rotate radial tires that have an asymmetric tread pattern only from front to rear and not from right to left.

**WARNING - Mixing tires**

- Do not use the compact spare tire (if equipped) for tire rotation.
- Do not mix bias ply and radial ply tires under any circumstances. This may cause unusual handling characteristics.

**Wheel alignment and tire balance**

The wheels on your vehicle were aligned and balanced carefully at the factory to give you the longest tire life and best overall performance.

In most cases, you will not need to have your wheels aligned again. However, if you notice unusual tire wear or your vehicle pulling one way or the other, the alignment may need to be reset.

If you notice your vehicle vibrating when driving on a smooth road, your wheels may need to be rebalanced.

**CAUTION - Wheel weight**

Improper wheel weights can damage your vehicle’s aluminum wheels. Use only approved wheel weights.
Tire replacement

If the tire is worn evenly, a tread wear indicator (A) will appear as a solid band across the tread. This shows there is less than 1/16 inch (1.6 mm) of tread left on the tire. Replace the tire when this happens.

Do not wait for the band to appear across the entire tread before replacing the tire.

The ABS works by comparing the speed of the wheels. The tire size affects wheel speed. When replacing tires, all 4 tires must use the same size originally supplied with the vehicle. Using tires of a different size can cause the ABS (Anti-lock Brake System) and ESC (Electronic Stability Control) to work irregularly.

✽ NOTICE

We recommend that when replacing tires, use the same originally supplied with the vehicles. If not, that affects driving performance.

Compact spare tire replacement

A compact spare tire has a shorter tread life than a regular size tire. Replace it when you can see the tread wear indicator bars on the tire. The replacement compact spare tire should be the same size and design tire as the one provided with your new vehicle and should be mounted on the same compact spare tire wheel. The compact spare tire is not designed to be mounted on a regular size wheel, and the compact spare tire wheel is not designed for mounting a regular size tire.
Wheel replacement
When replacing the metal wheels for any reason, make sure the new wheels are equivalent to the original factory units in diameter, rim width and offset.
A wheel that is not the correct size may adversely affect wheel and bearing life, braking and stopping abilities, handling characteristics, ground clearance, body-to-tire clearance, snow chain clearance, speedometer and odometer calibration, headlight aim and bumper height.

⚠️ CAUTION - Wheels
Wheels that do not meet Kia specifications may fit poorly and result in damage to the vehicle or unusual handling and poor vehicle control.

Tire traction
Tire traction can be reduced if you drive on worn tires, tires that are improperly inflated or on slippery road surfaces. Tires should be replaced when tread wear indicators appear. Slow down whenever there is rain, snow or ice on the road to reduce the possibility of losing control of the vehicle.

Tire maintenance
In addition to proper inflation, correct wheel alignment helps to decrease tire wear. If you find a tire is worn unevenly, have your dealer check the wheel alignment.
When you have new tires installed, make sure they are balanced. This will increase vehicle ride comfort and tire life. Additionally, a tire should always be rebalanced if it is removed from the wheel.

Tire sidewall labeling
This information identifies and describes the fundamental characteristics of the tire and also provides the tire identification number (TIN) for safety standard certification. The TIN can be used to identify the tire in case of a recall.

1. Manufacturer or brand name
Manufacturer or Brand name is shown.
2. Tire size designation
A tire's sidewall is marked with a tire size designation. You will need this information when selecting replacement tires for your vehicle. The following explains what the letters and numbers in the tire size designation mean.

Example tire size designation:
(These numbers are provided as an example only; your tire size designation could vary depending on your vehicle.)
P235/65R17 108T

P - Applicable vehicle type (tires marked with the prefix “P” are intended for use on passenger vehicles or light trucks; however, not all tires have this marking).
235 - Tire width in millimeters.
65 - Aspect ratio. The tire's section height as a percentage of its width.
R - Tire construction code (Radial).
17 - Rim diameter in inches.
108 - Load Index, a numerical code associated with the maximum load the tire can carry.
T - Speed Rating Symbol. See the speed rating chart in this section for additional information.

Wheel size designation
Wheels are also marked with important information that you need if you ever have to replace one. The following explains what the letters and numbers in the wheel size designation mean.

Example wheel size designation: 7.0JX17

7.0 - Rim width in inches.
J - Rim contour designation.
17 - Rim diameter in inches.
Tire speed ratings
The chart below lists many of the different speed ratings currently being used for passenger vehicle tires. The speed rating is part of the tire size designation on the sidewall of the tire. This symbol corresponds to that tire's designed maximum safe operating speed.

<table>
<thead>
<tr>
<th>Speed Rating Symbol</th>
<th>Maximum Speed</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>112 mph (180 km/h)</td>
</tr>
<tr>
<td>T</td>
<td>118 mph (190 km/h)</td>
</tr>
<tr>
<td>H</td>
<td>130 mph (210 km/h)</td>
</tr>
<tr>
<td>V</td>
<td>149 mph (240 km/h)</td>
</tr>
<tr>
<td>Z</td>
<td>Above 149 mph (240 km/h)</td>
</tr>
</tbody>
</table>

3. Checking tire life (TIN : Tire Identification Number)
Any tires that are over 6 years old, based on the manufacturing date, (including the spare tire) should be replaced by new ones. You can find the manufacturing date on the tire sidewall (possibly on the inside of the wheel), displaying the DOT Code. The DOT Code is a series of numbers on a tire consisting of numbers and English letters. The manufacturing date is designated by the last four digits (characters) of the DOT code.

DOT : XXXX XXXX OOOO
The front part of the DOT means a plant code number, tire size and tread pattern and the last four numbers indicate week and year manufactured.
For example:
DOT XXXX XXXX 1618 represents that the tire was produced in the 16th week of 2018.

WARNING - Tire age
Replace tires within the recommended time frame. Failure to replace tires as recommended can result in sudden tire failure, which could lead to a loss of control and an accident.
4. **Tire ply composition and material**

The number of layers or plies of rubber-coated fabric in the tire. Tire manufacturers also must indicate the materials in the tire, which include steel, nylon, polyester, and others. The letter "R" means radial ply construction; the letter "D" means diagonal or bias ply construction; and the letter "B" means belted-bias ply construction.

5. **Maximum permissible inflation pressure**

This number is the greatest amount of air pressure that should be put in the tire. Do not exceed the maximum permissible inflation pressure. Refer to the Tire and Loading Information label for recommended inflation pressure.

6. **Maximum load rating**

This number indicates the maximum load in kilograms and pounds that can be carried by the tire. When replacing the tires on the vehicle, always use a tire that has the same load rating as the factory installed tire.

7. **Uniform tire quality grading**

Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width.

For example:

- TREADWEAR 200
- TRACTION AA
- TEMPERATURE A

Tires degrade over time, even when they are not being used. Regardless of the remaining tread, we recommend that tires be replaced after approximately six (6) years of normal service. Heat caused by hot climates or frequent high loading conditions can accelerate the aging process.

**Tread wear**

The tread wear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one-and-a-half times (1½) as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate. These grades are molded on the side-walls of passenger vehicle tires. The tires available as standard or optional equipment on your vehicle may vary with respect to grade.
Maintenance

Traction - AA, A, B & C
The traction grades, from highest to lowest, are AA, A, B and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

Temperature - A, B & C
The temperature grades are A (the highest), B and C representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel.

Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger vehicle tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Tire terminology and definitions
Air Pressure: The amount of air inside the tire pressing outward on the tire. Air pressure is expressed in pounds per square inch (psi) or kilopascal (kPa).

Accessory Weight: This means the combined weight of optional accessories. Some examples of optional accessories are, automatic transaxle, power seats, and air conditioning.

Aspect Ratio: The relationship of a tire's height to its width.

Belt: A rubber coated layer of cords that is located between the plies and the tread. Cords may be made from steel or other reinforcing materials.

Bead: The tire bead contains steel wires wrapped by steel cords that hold the tire onto the rim.

Bias Ply Tire: A pneumatic tire in which the plies are laid at alternate angles less than 90 degrees to the centerline of the tread.
Cold Tire Pressure: The amount of air pressure in a tire, measured in pounds per square inch (psi) or kilopascals (kPa) before a tire has built up heat from driving.

Curb Weight: This means the weight of a motor vehicle with standard and optional equipment including the maximum capacity of fuel, oil and coolant, but without passengers and cargo.

DOT Markings: A code molded into the sidewall of a tire signifying that the tire is in compliance with the U.S. Department of Transportation motor vehicle safety standards. The DOT code includes the Tire Identification Number (TIN), an alphanumeric designator which can also identify the tire manufacturer, production plant, brand and date of production.

GVWR: Gross Vehicle Weight Rating
GAWR FRT: Gross Axle Weight Rating for the Front Axle.
GAWR RR: Gross Axle Weight Rating for the Rear axle.

Intended Outboard Sidewall: The side of an asymmetrical tire, that must always face outward when mounted on a vehicle.

Kilopascal (kPa): The metric unit for air pressure.

Light truck (LT) tire: A tire designated by its manufacturer as primarily intended for use on lightweight trucks or multipurpose passenger vehicles.

Load ratings: The maximum load that a tire is rated to carry for a given inflation pressure.

Load Index: An assigned number ranging from 1 to 279 that corresponds to the load carrying capacity of a tire.

Maximum Inflation Pressure: The maximum air pressure to which a cold tire may be inflated. The maximum air pressure is molded onto the sidewall.

Maximum Load Rating: The load rating for a tire at the maximum permissible inflation pressure for that tire.

Maximum Loaded Vehicle Weight: The sum of curb weight; accessory weight; vehicle capacity weight; and production options weight.

Normal Occupant Weight: The number of occupants a vehicle is designed to seat multiplied by 150 pounds (68 kg).

Occupant Distribution: Designated seating positions.

Outward Facing Sidewall: The side of an asymmetrical tire that has a particular side that faces outward when mounted on a vehicle. The outward facing sidewall bears white lettering or bears manufacturer, brand, and/or model name molding that is higher or deeper than the same moldings on the inner facing sidewall.

Passenger (P-Metric) Tire: A tire used on passenger cars and some light duty trucks and multipurpose vehicles.

Ply: A layer of rubber-coated parallel cords.
**Pneumatic tire:** A mechanical device made of rubber, chemicals, fabric and steel or other materials, that, when mounted on an automotive wheel, provides the traction and contains the gas or fluid that sustains the load.

**Production options weight:** The combined weight of installed regular production options weighing over 5 lb. (2.3 kg) in excess of the standard items which they replace, not previously considered in curb weight or accessory weight, including heavy duty brakes, ride levelers, roof rack, heavy duty battery, and special trim.

**Recommended Inflation Pressure:** Vehicle manufacturer's recommended tire inflation pressure and shown on the tire placard.

**Radial Ply Tire:** A pneumatic tire in which the ply cords that extend to the beads are laid at 90 degrees to the centerline of the tread.

**Rim:** A metal support for a tire and upon which the tire beads are seated.

**Sidewall:** The portion of a tire between the tread and the bead.

**Speed Rating:** An alphanumeric code assigned to a tire indicating the maximum speed at which a tire can operate.

**Traction:** The friction between the tire and the road surface. The amount of grip provided.

**Tread:** The portion of a tire that comes into contact with the road.

**Treadwear Indicators:** Narrow bands, sometimes called "wear bars," that show across the tread of a tire when only 2/32 inch of tread remains.

**UTQGS:** Uniform Tire Quality Grading Standards, a tire information system that provides consumers with ratings for a tire's traction, temperature and treadwear. Ratings are determined by tire manufacturers using government testing procedures. The ratings are molded into the sidewall of the tire.

**Vehicle Capacity Weight:** The number of designated seating positions multiplied by 150 lbs. (68 kg) plus the rated cargo and luggage load.

**Vehicle Maximum Load on the Tire:** Load on an individual tire due to curb and accessory weight plus maximum occupant and cargo weight.

**Vehicle Normal Load on the Tire:** Load on an individual tire that is determined by distributing to each axle its share of the curb weight, accessory weight, and normal occupant weight and driving by 2.

**Vehicle Placard:** A label permanently attached to a vehicle showing the original equipment tire size and recommended inflation pressure.
All season tires
Kia specifies all season tires on some models to provide good performance for use all year round, including snowy and icy road conditions. All season tires are identified by ALL SEASON and/or M+S (Mud and Snow) on the tire sidewall. Snow tires have better snow traction than all season tires and may be more appropriate in some areas.

Summer tires
Kia specifies summer tires on some models to provide superior performance on dry roads. Summer tire performance is substantially reduced in snow and ice. Summer tires do not have the tire traction rating M+S (Mud and Snow) on the tire side wall. If you plan to operate your vehicle in snowy or icy conditions, Kia recommends the use of snow tires or all season tires on all four wheels.

Snow tires
If you equip your vehicle with snow tires, they should be the same size and have the same load capacity as the original tires. Snow tires should be installed on all four wheels; otherwise, poor handling may result. Snow tires should carry 4 psi (28 kPa) more air pressure than the pressure recommended for the standard tires on the tire label on the driver's side of the center pillar, or up to the maximum pressure shown on the tire sidewall, whichever is less.

Do not drive faster than 75 mph (120 km/h) when your vehicle is equipped with snow tires.

Tire chains
Tire chains, if necessary, should be installed on the front wheels. Be sure that the chains are installed in accordance with the manufacturer's instructions. To minimize tire and chain wear, do not continue to use tire chains when they are no longer needed.
When driving on roads covered with snow or ice, drive at less than 20 mph (30 km/h).

Use the SAE “S” class or wire chains.

If you hear noise caused by chains contacting the body, retighten the chain to avoid contact with the vehicle body.

To prevent body damage, retighten the chains after driving 0.3~0.6 miles (0.5~1.0 km).

Do not use tire chains on vehicles equipped with aluminum wheels. In unavoidable circumstance, use a wire type chain.

Use wire chains less than 0.59 inches (15 mm) to prevent damage to the chain’s connection.

**Radial-ply tires**

Radial-ply tires provide improved tread life, road hazard resistance and smoother high speed ride. The radial-ply tires used on this vehicle are of belted construction, and are selected to complement the ride and handling characteristics of your vehicle. Radial-ply tires have the same load carrying capacity, as bias-ply or bias belted tires of the same size, and use the same recommended inflation pressure. Mixing of radial-ply tires with bias-ply or bias belted tires is not recommended. Any combinations of radial-ply and bias-ply or bias belted tires when used on the same vehicle will seriously deteriorate vehicle handling. The best rule to follow is: Identical radial-ply tires should always be used as a set of four.

Longer wearing tires can be more susceptible to irregular tread wear. It is very important to follow the tire rotation interval shown in this section to achieve the tread life potential of these tires. Cuts and punctures in radial-ply tires are repairable only in the tread area, because of sidewall flexing. Consult your tire dealer for radial-ply tire repairs.
Low aspect ratio tire (if equipped)

Low aspect ratio tires, whose aspect ratio is lower than 50, are provided for sporty looks.

Because the low aspect ratio tires are optimized for handling and braking, it may be more uncomfortable to ride in and there is more noise compared with normal tires.

⚠️ CAUTION

*Because the sidewall of the low aspect ratio tire is shorter than the normal, the wheel and tire of the low aspect ratio tire is easier to be damaged. So, follow the instructions below.*

- **When driving on a rough road or off road**, drive cautiously because tires and wheels may be damaged. And after driving, inspect tires and wheels.

- **When passing over a pothole, speed bump, manhole, or curb stone**, drive slowly so that the tires and wheels are not damaged.

- **If the tire is impacted**, we recommend that you inspect the tire condition or contact an authorized Kia dealer.

- **To prevent damage to the tire**, inspect the tire condition and pressure every 1,900 miles (3,000 km).

- It is not easy to recognize the tire damage with your own eyes. But if there is the slightest hint of tire damage, even though you cannot see the tire damage with your own eyes, have the tire checked or replaced because the tire damage may cause air leakage from the tire.

- If the tire is damaged by driving on a rough road, off road, pothole, manhole, or curb stone, it will not be covered by the warranty.

- You can find out the tire information on the tire sidewall.
A vehicle's electrical system is protected from electrical overload damage by fuses.

This vehicle has 2 (or 3) fuse panels, one located in the driver's side panel bolster, the other in the engine compartment near the battery.

If any of your vehicle's lights, accessories, or controls do not work, check the appropriate circuit fuse. If a fuse has blown, the element inside the fuse will melt.

If the electrical system does not work, first check the driver's side fuse panel.

Always replace a blown fuse with one of the same rating.

If the replacement fuse blows, this indicates an electrical problem. Avoid using the system involved and immediately consult an authorized Kia dealer.

Three kinds of fuses are used: micro mini type for lower amperage rating, cartridge type, and multi fuse for higher amperage ratings.

**WARNING - Fuse replacement**
- Never replace a fuse with anything but another fuse of the same rating.
- A higher capacity fuse could cause damage and possibly a fire.
- Never install a wire or aluminum foil instead of the proper fuse - even as a temporary repair. It may cause extensive wiring damage and a possible fire.

- Do not arbitrarily modify or add-on electric wiring to the vehicle.
**CAUTION**

*Do not use a screwdriver or any other metal object to remove fuses because it may cause a short circuit and damage the system.*

**NOTICE**

- When replacing fuse, turn the ignition “OFF” and turn off switches of all electrical devices then remove battery (-) terminal.
- The actual fuse/relay panel label may differ from equipped items.

**WARNING - Electrical Fire**

- Always ensure replacements fuses and relays are securely fastened when installed. Failure to do so can result in a vehicle fire.
- We recommend that you do not remove fuses, relays and terminals that are fastened with bolts or nuts. If they are not completely re-installed, such looseness may cause electrical arcing and a possible fire. If fuses, relays and terminals fastened with bolts or nuts need replacement, consult with an authorized Kia dealer.

**CAUTION - Fuse fire**

- When replacing a blown fuse or relay, make sure the new fuse or relay fits tightly into the clips. Failure to tightly install the fuse or relay may cause damage to the wiring and electric systems.
- Do not remove fuses, relays and terminals fastened with bolts or nuts. The fuses, relays and terminals may not be fastened correctly which may cause vehicle damage.

**CAUTION - Fuse Replacement**

*Do not input any other objects except fuses or relays into fuse/relay terminals such as a driver or wiring. It may cause contact failure and system malfunction.*
Inner panel fuse replacement

1. Turn the ignition switch and all other switches off.
2. Open the fuse panel cover.
3. Pull the suspected fuse straight out. Use the fuse puller provided on the engine compartment fuse panel cover.
4. Check the removed fuse; replace it if it is blown.
   
   *Spare fuses are provided in the engine compartment fuse panel.*
5. Push in a new fuse of the same rating, and make sure it fits tightly in the clips.
   
   If it fits loosely, consult an authorized Kia dealer.

*If you do not have a spare, use a fuse of the same rating from a circuit you may not need for operating the vehicle, such as the power outlet fuse.*
*If the headlights or other electrical components do not work and the fuses are OK, check the fuse panel in the engine compartment. If a fuse is blown, it must be replaced.*
**Fuse switch**

Put the fuse switch at the ON position.
If you move the switch to the OFF position, some items such as audio and digital clock must be reset and transmitter (or smart key) may not work properly.

**NOTICE**

If you need to park your vehicle for prolonged periods more than 1 month, move the transportation fuse switch to the OFF position to prevent the battery being discharged.

**Engine compartment fuse replacement**

1. Turn the ignition switch and all other switches off.
2. Remove the fuse panel cover by pressing the tab and pulling the cover up. When the blade type fuse is disconnected, remove it by using the clip designed for changing fuses located in the engine room fuse box. Upon removal, securely insert reserve fuse of equal quantity.
3. Check the removed fuse; replace it if it is blown. To remove or insert the fuse, use the fuse puller in the engine compartment fuse panel.

4. Push in a new fuse of the same rating, and make sure it fits tightly in the clips. If it fits loosely, consult an authorized Kia dealer.

**NOTICE**
If the multi fuse is blown, consult an authorized Kia dealer.

**CAUTION**
Visually inspect the battery cap for secure closing. If the battery cap is not securely latched, the electrical system may be damaged due to moisture entering the system.

---

**CAUTION - Fuse panel covers**
After checking the fuse panel in the engine compartment, securely install the fuse panel cover with using cover locking sound. If not, electrical failures may occur from water contact.

---

If the multi fuse is blown, it must be removed as follows:
1. Turn off the engine.
2. Disconnect the negative battery cable.
3. Remove the nuts shown in the picture above.
4. Replace the fuse with a new one of the same rating.
5. Reinstall in the reverse order of removal.
Fuse/relay panel description

Inside the fuse/relay panel covers, you can find the fuse/relay label describing fuse/relay name and capacity.

NOTICE
Not all fuse panel descriptions in this manual may be applicable to your vehicle. It is accurate at the time of printing. When you inspect the fuse panel in your vehicle, refer to the fuse panel label.

LIGHT BULBS

Bulb replacement precaution
Please keep extra bulbs on hand with appropriate wattage ratings in case of emergencies.
Refer to “Bulb Wattage” in chapter 9.
When changing lamps, first turn off the engine at a safe place, firmly apply the parking brake and detach the battery’s negative (-) terminal.

Use only bulbs of the specified wattage.

✽ NOTICE
• If the light bulb or lamp connector is removed while the lamp is still on, the fuse box's electronic system may log it as a malfunction. Therefore, a lamp malfunction incident may be recorded as a Diagnostic Trouble Code (DTC) in the fuse box.
• It is normal for an operating lamp to flicker momentarily. This is due to a stabilization function of the vehicle’s electronic control device. If the lamp lights up normally after momentarily blinking, then it is functioning as normal. However, if the lamp continues to flicker several times or turns off completely, there may be an error in the vehicle’s electronic control device. Please have the vehicle checked by an authorized Kia dealer immediately.

WARNING - Working on the lights
Prior to working on the light, firmly apply the parking brake, ensure that the ignition switch is turned to the LOCK position and turn off the lights to avoid sudden movement of the vehicle and burning your fingers or receiving an electric shock.

CAUTION - Headlamp Lens
To prevent damage, do not clean the headlamp lens with chemical solvents or strong detergents.

CAUTION - Light replacement
Be sure to replace the burned-out bulb with one of the same wattage rating. Otherwise, it may cause damage to the fuse or electric wiring system.
If you don't have the necessary tools, the correct bulbs and the expertise, consult an authorized Kia dealer. In many cases, it is difficult to replace vehicle light bulbs because other parts of the vehicle must be removed before you can get to the bulb. This is especially true if you have to remove the headlamp assembly to get to the bulb(s).

Removing/installing the headlamp assembly can result in damage to the vehicle.

If non-genuine parts or substandard bulbs are used, it may lead to blowing a fuse or other wiring damages.

Do not install extra lamps or LEDs to the vehicle. If additional lights are installed, it may lead to lamp malfunctions and flickering. Additionally, the fuse box and other writing may be damaged.

Light bulb position (Rear)

Headlamp (HID type) bulb replacement

If the light bulb does not operate, have the vehicle checked by an authorized Kia dealer.

**NOTICE**

HID lamps have superior performance vs. halogen bulbs. HID lamps are estimated by the manufacturer to last twice as long or longer than halogen bulbs depending on their frequency of use. They will probably require replacement at some point in the life of the vehicle. Cycling the headlamps on and off more than typical use will shorten HID lamps life. HID lamps do not fail in the same manner as halogen incandescent lamps. If a headlamp goes out after a period of operation but immediately relights when the headlamp switch is cycled, it is likely the HID lamp needs to be replaced. HID lamping components are more complex than conventional halogen bulbs thus have higher replacement cost.

(1) Tail lamp (Bulb type)
(2) Tail and stop lamp (Bulb type)
(3) Rear turn signal lamp
(4) Back-up lamp
(5) Tail lamp (Bulb type)
(6) Tail and stop lamp (LED type)
Headlamp (Low/High beam) bulb replacement

1. Turn off the engine and open the hood. Disconnect the negative battery cable.
2. Disconnect the power connector front the back of the headlamp assembly.
3. Loosen the retaining bolts.
4. Pull out the end of the front bumper.
5. Remove the headlamp assembly from the body of the vehicle.

* If you can reach the bulb without removing the headlamp assembly, you do not need to do step 3, 4 and 5.
6. Remove the headlamp bulb cover by turning it counterclockwise.
7. Disconnect the headlamp bulb socket-connector.
8. Unsnap the headlamp bulb retaining wire by depressing the end and pushing it upward.

9. Remove the bulb from the headlamp assembly.
10. Install a new headlamp bulb and snap the headlamp bulb retaining wire into position by aligning the wire with the groove on the bulb.
11. Connect the headlamp bulb socket connector.
12. Install the headlamp bulb cover by turning it clockwise.
13. Connect the power connector to the back of the headlamp assembly.
14. Reinstall the headlamp assembly to the body of the vehicle.

*WARNING - Halogen bulbs
Handle halogen bulbs with care.
• Halogen bulbs contain pressurized gas that will produce flying pieces of glass if broken.

*NOTICE
If the headlamp aiming adjustment is necessary after the headlamp assembly is reinstalled, we recommend that you consult an authorized Kia dealer.
• Always handle them carefully, and avoid scratches and abrasions. If the bulbs are lit, avoid contact with liquids. Never touch the glass with bare hands. Residual oil may cause the bulb to overheat and burst when lit. A bulb should be operated only when installed in a headlamp.

• If a bulb becomes damaged or cracked, replace it immediately and carefully dispose of it.

• Wear eye protection when changing a bulb. Allow the bulb to cool down before handling it.

Front turn signal lamp bulb replacement

1. Turn off the engine and open the hood. Disconnect the negative battery cable.

2. Disconnect the power connector from the back of the headlamp assembly.

3. Loosen the retaining bolts.
4. Pull out the end of the front bumper.
5. Remove the headlamp assembly from the body of the vehicle.

※ If you can reach the bulb without removing the headlamp assembly, you do not need to do step 3, 4 and 5.

6. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.
7. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket.
8. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.
9. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly and turning the socket clockwise.
10. Reinstall the lamp assembly to the body of the vehicle.
**Front side marker bulb replacement**

1. Turn off the engine and open the hood. Disconnect the negative battery cable.

2. Disconnect the power connector front the back of the headlamp assembly.
3. Loosen the retaining bolts.

4. Pull out the end of the front bumper.
5. Remove the headlamp assembly from the body of the vehicle.

※ If you can reach the bulb without removing the headlamp assembly, you do not need to do step 3, 4 and 5.
6. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.
7. Pull the bulb out of the socket.
8. Insert a new bulb into the socket.
9. Install the socket into the assembly by aligning the tabs on the socket with the slots on the assembly and turning the socket clockwise.
10. Reinstall the lamp assembly to the body of the vehicle.

If the position lamp + DRL (1) does not operate, we recommend that you checked an authorized Kia dealer.

1. Remove the front bumper under cover.
2. Reach your hand into the back of the front bumper.
3. Disconnect the power connector from the socket.
4. Remove the bulb-socket from the housing by turning the socket counter clockwise until the tabs on the socket align with the slots on the housing.
5. Install the new bulb-socket into the housing by aligning the tabs on the socket with the slots in the housing. Push the socket into the housing and turn the socket clockwise.
6. Connect the power connector to the socket.
7. Reinstall the front bumper under cover.

★ NOTICE
If the fog lamp aiming adjustment is necessary after the fog lamp assembly is reinstalled, we recommend that you consult an authorized Kia dealer.

Side repeater lamp (LED type) bulb replacement
If the Side repeater lamp (LED type) does not operate, we recommend that you have your vehicle checked by an authorized Kia dealer.
Rear turn signal lamp bulb replacement

1. Open the liftgate.
2. Loosen the lamp assembly retaining screws with a screwdriver.
3. Remove the rear combination lamp assembly from the body of the vehicle.
4. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.
5. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket.
6. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.
7. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly and turning the socket clockwise.
8. Reinstall the lamp assembly to the body of the vehicle.
Stop and tail lamp bulb replacement

1. Open the liftgate.
2. Loosen the lamp assembly retaining screws with a screwdriver.
3. Remove the rear combination lamp assembly from the body of the vehicle.

4. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.
5. Remove the bulb from the socket by pressing it in and rotating it counterclockwise until the tabs on the bulb align with the slots in the socket.
6. Insert a new bulb by inserting it into the socket and rotating it until it locks into place.

7. Install the socket in the assembly by aligning the tabs on the socket with the slots in the assembly and turning the socket clockwise.
8. Reinstall the lamp assembly to the body of the vehicle.
Back-up lamp bulb replacement

1. Open the liftgate.
2. Loosen the lamp assembly retaining screws with a screwdriver.
3. Remove the rear combination lamp assembly from the body of the vehicle.
4. Remove the socket from the assembly by turning the socket counterclockwise until the tabs on the socket align with the slots on the assembly.
5. Pull the bulb out of the socket.
6. Insert a new bulb into the socket.
7. Install the socket into the assembly by aligning the tabs on the socket with the slots on the assembly and turning the socket clockwise.
8. Reinstall the lamp assembly to the body of the vehicle.
If the Stop and tail lamp (LED type) (1) does not operate, we recommend that you have your vehicle checked by an authorized Kia dealer.

**Stop and tail lamp (LED type) bulb replacement**

1. Open the liftgate.
2. Remove the cover.
3. Loosen the retaining bolts and remove the hose (1).

**High mounted stop lamp bulb replacement**

4. Pull out the module from the high mounted stop lamp assembly by pulling both clips.
5. Replace the bulbs by pulling it out.
6. Reinstall in the reverse order.
High mounted stop lamp (LED type) bulb replacement

If the High mounted stop lamp (LED type) (1) does not operate, we recommend that you have your vehicle checked by an authorized Kia dealer.

License plate lamp bulb replacement

1. Remove the lens by pressing the tabs.
2. Remove the socket from the lens.
3. Remove the bulb by turning it counter clockwise.
4. Install a new bulb in the socket and install the socket to the lens.
5. Reinstall the lens securely.

Map lamp bulb replacement

![Map lamp bulb replacement image]

**WARNING - Interior lamps**

Prior to working on the Interior lamps, ensure that the “OFF” button is depressed to avoid burning your fingers or receiving an electric shock.
1. Using a flat-blade screwdriver, gently pry the lens cover from lamp housing.
2. Remove the bulb by pulling it straight out.
3. Install a new bulb in the socket.
4. Align the lens cover tabs with the lamp housing notches and snap the lens into place.

⚠️ CAUTION
Be careful not to dirty or damage the lens, lens tab, and plastic housings.

⚠️ WARNING - Interior lamps
Prior to working on the Interior lamps, ensure that the “OFF” button is depressed to avoid burning your fingers or receiving an electric shock.
Glove box lamp bulb replacement

1. Using a flat-blade screwdriver, gently pry the lamp assembly from interior.
2. Remove the bulb by pulling it straight out.
3. Install a new bulb in the socket.
4. Install the lamp assembly to interior.

CAUTION

Be careful not to dirty or damage the lens, lens tab, and plastic housings.

Luggage lamp bulb replacement

1. Using a flat-blade screwdriver, gently pry the lamp assembly from interior.
2. Remove the bulb by pulling it straight out.
3. Install a new bulb in the socket.
4. Install the lamp assembly to interior.
Vanity mirror lamp bulb replacement

1. Using a flat-blade screwdriver, gently pry the lamp assembly from interior.
2. Remove the bulb by pulling it straight out.
3. Install a new bulb in the socket.
4. Install the lamp assembly to interior.

⚠️ CAUTION
Be careful not to dirty or damage the lens, lens tab, and plastic housings.

⚠️ WARNING - Interior lamps
Prior to working on the Interior lamps, ensure that the “OFF” button is depressed to avoid burning your fingers or receiving an electric shock.
APPEARANCE CARE

Exterior care

Exterior general caution
It is very important to follow the label directions when using any chemical cleaner or polish. Read all warning and caution statements that appear on the label.

Finish maintenance

Washing
To help protect your vehicle’s finish from rust and deterioration, wash it thoroughly and frequently at least once a month with lukewarm or cold water. If you use your vehicle for off-road driving, you should wash it after each off-road trip. Pay special attention to the removal of any accumulation of salt, dirt, mud, and other foreign materials. Make sure the drain holes in the lower edges of the doors and rocker panels are kept clear and clean. Insects, tar, tree sap, bird droppings, industrial pollution and similar deposits can damage your vehicle’s finish if not removed immediately. Even prompt washing with plain water may not completely remove all these deposits. A mild soap, safe for use on painted surfaces, may be used.

After washing, rinse the vehicle thoroughly with lukewarm or cold water. Do not allow soap to dry on the finish.

After washing the vehicle, test the brakes while driving slowly to see if they have been affected by water. If braking performance is impaired, dry the brakes by applying them lightly while maintaining a slow forward speed.

CAUTION

- Do not use strong soap, chemical detergents or hot water, and do not wash the vehicle in direct sunlight or when the body of the vehicle is warm.
- Be careful when washing the side windows of your vehicle. Especially, with high-pressure water. Water may leak through the windows and wet the interior.
- To prevent damage to the plastic parts and lamps, do not clean with chemical solvents or strong detergents.
**High-pressure washing**

- When using high-pressure washers, make sure to maintain sufficient distance from the vehicle. Insufficient clearance or excessive pressure can lead to component damage or water penetration.

- Do not spray the camera, sensors or its surrounding area directly with a high pressure washer. Shock applied from high pressure water may cause the device to not operate normally.

- Do not bring the nozzle tip close to boots (rubber or plastic covers) or connectors as they may be damaged if they come into contact with high pressure water.

**Waxing**

Wax the vehicle when water will no longer bead on the paint. Always wash and dry the vehicle before waxing. Use a good quality liquid or paste wax, and follow the manufacturer’s instructions. Wax all metal trim to protect it and to maintain its luster.

Removing oil, tar, and similar materials with a spot remover will usually strip the wax from the finish. Be sure to re-wax these areas even if the rest of the vehicle does not yet need waxing.

**NOTICE**

Do not apply wax on embossed unpainted unit, as it may tarnish the unit.
**Finish damage repair**
Deep scratches or stone chips in the painted surface must be repaired promptly. Exposed metal will quickly rust and may develop into a major repair expense.

**NOTICE**
If your vehicle is damaged and requires any metal repair or replacement, be sure the body shop applies anti-corrosion materials to the parts repaired or replaced.

**Bright-metal maintenance**
- To remove road tar and insects, use a tar remover, not a scraper or other sharp object.
- To protect the surfaces of bright-metal parts from corrosion, apply a coating of wax or chrome preservative and rub to a high luster.
- During winter weather or in coastal areas, cover the bright metal parts with a heavier coating of wax or preservative. If necessary, coat the parts with non-corrosive petroleum jelly or other protective compound.

---

⚠️ **CAUTION - Drying vehicle**
- Wiping dust or dirt off the body with a dry cloth will scratch the finish.
- Do not use steel wool, abrasive cleaners, acid detergents or strong detergents containing high alkaline or caustic agents on chrome-plated or anodized aluminum parts. This may result in damage to the protective coating and cause discoloration or paint deterioration.

- To remove road tar and insects, use a tar remover, not a scraper or other sharp object.
- To protect the surfaces of bright-metal parts from corrosion, apply a coating of wax or chrome preservative and rub to a high luster.
- During winter weather or in coastal areas, cover the bright metal parts with a heavier coating of wax or preservative. If necessary, coat the parts with non-corrosive petroleum jelly or other protective compound.
**Underbody maintenance**

Road salt and other corrosive chemicals are used in cold weather states to melt snow and prevent ice accumulation. If these chemicals are not regularly removed, they will corrode the vehicle underbody and over time damage fuel lines, the fuel tank retention system, the vehicle suspension, the exhaust system, and even the body frame. The National Highway Traffic Safety Administration has warned all vehicle owners of all brands of the need to take the following steps:

- Wash the undercarriage of your vehicle regularly during the winter and whenever your vehicle has been exposed to salts or chemicals.
- Do a thorough washing of the undercarriage at the end of the winter.
- Use professional service technicians or governmental inspection stations to annually inspect for corrosion.
- Immediately seek an inspection of your vehicle if you become visually aware of corrosion flaking or scaling or if you become aware of a change in vehicle performance, such as soft or spongey brakes, fluids leaking, impairment of directional control, suspension noises or rattling metal straps.

**Aluminum wheel maintenance**

The aluminum wheels are coated with a clear protective finish.

- Do not use any abrasive cleaner, polishing compound, solvent, or wire brushes on aluminum wheels. They may scratch the finish.
- Clean the wheel when it has cooled.
- Use only a mild soap or neutral detergent, and rinse thoroughly with water. Also, be sure to clean the wheels after driving on salted roads. This helps prevent corrosion.
- Avoid washing the wheels with highspeed vehicle wash brushes.
- Do not use any alkaline or acid detergents. It may damage and corrode the aluminum wheels coated with a clear protective finish.
Corrosion protection
Protecting your vehicle from corrosion
By using the most advanced design and construction practices to combat corrosion, we produce vehicles of the highest quality. However, this is only part of the job. To achieve the long-term corrosion resistance your vehicle can deliver, the owner's cooperation and assistance is also required.

Common causes of corrosion
The most common causes of corrosion on your vehicle are:
• Road salt, dirt and moisture that is allowed to accumulate underneath the vehicle.
• Removal of paint or protective coatings by stones, gravel, abrasion or minor scrapes and dents which leave unprotected metal exposed to corrosion.

High-corrosion areas
If you live in an area where your vehicle is regularly exposed to corrosive materials, corrosion protection is particularly important. Some of the common causes of accelerated corrosion are road salts, dust control chemicals, ocean air and industrial pollution.

Moisture breeds corrosion
Moisture creates the conditions in which corrosion is most likely to occur. For example, corrosion is accelerated by high humidity, particularly when temperatures are just above freezing. In such conditions, the corrosive material is kept in contact with the vehicle's surface by moisture that evaporates slowly. Mud is particularly corrosive because it dries slowly and holds moisture in contact with the vehicle. Although the mud appears to be dry, it can still retain the moisture and promote corrosion.

WARNING
After washing the vehicle, test the brakes while driving slowly to see if they have been affected by water. If braking performance is impaired, dry the brakes by applying them lightly while maintaining a slow forward speed.
High temperatures can also accelerate corrosion of parts that are not properly ventilated so the moisture can be dispersed. For all these reasons, it is particularly important to keep your vehicle clean and free of mud or accumulations of other materials. This applies not only to the visible surfaces but particularly to the underside of the vehicle.

**To help prevent corrosion**
You can help prevent corrosion from beginning by observing the following:

**Keep your vehicle clean**
The best way to prevent corrosion is to keep your vehicle clean and free of corrosive materials. Attention to the underside of the vehicle is particularly important.

- If you live in a high-corrosion area — where road salts are used, near the ocean, areas with industrial pollution, acid rain, etc.—, you should take extra care to prevent corrosion. In winter, hose off the underside of your vehicle at least once a month and be sure to clean the underside thoroughly when winter is over.
- When cleaning underneath the vehicle, give particular attention to the components under the fenders and other areas that are hidden from view. Do a thorough job; just dampening the accumulated mud rather than washing it away will accelerate corrosion rather than prevent it. Water under high pressure and steam are particularly effective in removing accumulated mud and corrosive materials.
- When cleaning lower door panels, rocker panels and frame members, be sure that drain holes are kept open so that moisture can escape and not be trapped inside to accelerate corrosion.

**Keep your garage dry**
Don't park your vehicle in a damp, poorly ventilated garage. This creates a favorable environment for corrosion. This is particularly true if you wash your vehicle in the garage or drive it into the garage when it is still wet or covered with snow, ice or mud. Even a heated garage can contribute to corrosion unless it is well ventilated so moisture is dispersed.
Keep paint and trim in good condition
Scratches or chips in the finish should be covered with "touch-up" paint as soon as possible to reduce the possibility of corrosion. If bare metal is showing through, the attention of a qualified body and paint shop is recommended.

Bird droppings: Bird droppings are highly corrosive and may damage painted surfaces in just a few hours. Always remove bird droppings as soon as possible.

Don’t neglect the interior
Moisture can collect under the floor mats and carpeting and cause corrosion. Check under the mats periodically to be sure the carpeting is dry. Use particular care if you carry fertilizers, cleaning materials or chemicals in the vehicle.
These should be carried only in proper containers and any spills or leaks should be cleaned up, flushed with clean water and thoroughly dried.

Interior care
Interior general precautions
Prevent chemicals such as perfume, cosmetic oil, sun cream, hand cleaner, and air freshener from contacting the interior parts because they may cause damage or discoloration. If they do contact the interior parts, wipe them off immediately. If necessary, use a vinyl cleaner, see product instructions for correct usage.

⚠️ CAUTION - Electrical components
Never allow water or other liquids to come in contact with electrical/electronic components inside the vehicle as this may damage them.

⚠️ CAUTION - Leather
When cleaning leather products (steering wheel, seats etc.), use neutral detergents or low alcohol content solutions. If you use high alcohol content solutions or acid/alkaline detergents, the color of the leather may fade or the surface may get stripped off.
**Taking care of leather seats**
- Vacuum the seat periodically to remove dust and sand on the seat. It will prevent abrasion or damage of the leather and maintain its quality.
- Wipe the natural leather seat cover often with dry or soft cloth.
- Sufficient use of a leather protective may prevent abrasion of the cover and helps maintain the color. Be sure to read the instructions and consult a specialist when using leather coating or protective agents.
- Leather with bright colors (beige, cream beige) is easily contaminated and clear in appearance. Clean the seats frequently.
- Avoid wiping with wet cloth. It may cause the surface to crack.

**Cleaning the leather seats**
- Remove all contaminations instantly. Refer to instructions below for removal of each contaminant.
- Cosmetic products (sunscreen, foundation, etc.)
  - Apply cleansing cream on a cloth and wipe the contaminated point. Wipe off the cream with a wet cloth and remove water with a dry cloth.
- Beverages (coffee, soft drink, etc.)
  - Apply a small amount of neutral detergent and wipe until contaminations do not smear.
- Oil
  - Remove oil immediately with absorbable cloth and wipe with stain remover for natural leather only.
- Chewing gum
  - Harden the gum with ice and remove gradually.

**Fabric seat cover (If equipped)**
Please clean the fabric seats regularly with a vacuum cleaner in consideration of fabric material characteristics. If they are heavily soiled with beverage stains, etc., use a suitable interior cleaner. To prevent damage to seat covers, wipe off the seat covers down to the seams with a large wiping motion and moderate pressure using a soft sponge or microfiber cloth.
Velcro closures on clothing or sharp objects may cause snagging or scratches on the surface of the seats. Make sure not to rub such objects against the surface.
Cleaning the upholstery and interior trim

Vinyl
Remove dust and loose dirt from vinyl with a whisk broom or vacuum cleaner. Clean vinyl surfaces with a vinyl cleaner.

Fabric
Remove dust and loose dirt from fabric with a whisk broom or vacuum cleaner. Clean with a mild soap solution recommended for upholstery or carpets. Remove fresh spots immediately with a fabric spot cleaner. If fresh spots do not receive immediate attention, the fabric can be stained and its color can be affected. Also, its fire-resistant properties can be reduced if the material is not properly maintained.

Using anything but recommended cleaners and procedures may affect the fabric’s appearance and fire-resistant properties.

Cleaning the lap/shoulder belt webbing
Clean the belt webbing with any mild soap solution recommended for cleaning upholstery or carpet. Follow the instructions provided with the soap. Do not bleach or re-dye the webbing because this may weaken it.

Cleaning the interior window glass
If the interior glass surfaces of the vehicle become fogged (that is, covered with an oily, greasy or waxy film), they should be cleaned with a glass cleaner. Follow the directions on the glass cleaner container.

⚠️ CAUTION - Rear window
Do not scrape or scratch the inside of the rear window. This may result in damage of the rear window defroster grid.
EMISSION CONTROL SYSTEM

The emission control system of your vehicle is covered by a written limited warranty. Please see the warranty information contained in the Warranty & Maintenance booklet in your vehicle.

Your vehicle is equipped with an emission control system to meet all applicable emission regulations. There are three emission control systems, as follows.

1. Crankcase emission control system
2. Evaporative emission control system
3. Exhaust emission control system

In order to assure the proper function of the emission control systems, it is recommended that you have your vehicle inspected and maintained by an authorized Kia dealer in accordance with the maintenance schedule in this manual.

Caution for the Inspection and Maintenance Test (With Electronic Stability Control (ESC) system)

- To prevent the vehicle from misfiring during dynamometer testing, turn the Electronic Stability Control (ESC) system off by pressing the ESC switch.
- After dynamometer testing is completed, turn the ESC system back on by pressing the ESC switch again.

1. Crankcase emission control system

The positive crankcase ventilation system is employed to prevent air pollution caused by blow-by gases being emitted from the crankcase. This system supplies fresh filtered air to the crankcase through the air intake hose. Inside the crankcase, the fresh air mixes with blow-by gases, which then pass through the PCV valve into the induction system.

2. Evaporative emission control system (including ORVR: Onboard Refueling Vapor Recovery) system

The Evaporative Emission Control System is designed to prevent fuel vapors from escaping into the atmosphere. (The ORVR system is designed to allow the vapors from the fuel tank to be loaded into a canister while refueling at the gas station, preventing the escape of fuel vapors into the atmosphere.)
Canister
Fuel vapors generated inside the fuel tank are absorbed and stored in the onboard canister. When the engine is running, the fuel vapors absorbed in the canister are drawn into the surge tank through the purge control solenoid valve.

Purge Control Solenoid Valve (PCSV)
The purge control solenoid valve is controlled by the Engine Control Module (ECM); when the engine coolant temperature is low during idling, the PCSV closes so that evaporated fuel is not taken into the engine. After the engine warms up during ordinary driving, the PCSV opens to introduce evaporated fuel to the engine.

3. Exhaust emission control system
The Exhaust Emission Control System is a highly effective system which controls exhaust emissions while maintaining good vehicle performance.

Vehicle modifications
This vehicle should not be modified. Modification of your vehicle could affect its performance, safety or durability and may even violate governmental safety and emissions regulations.
In addition, damage or performance problems resulting from any modification may not be covered under warranty.
• If you use unauthorized electronic devices, it may cause the vehicle to operate abnormally, wire damage, battery discharge and fire. For your safety, do not use unauthorized electronic devices.

Engine exhaust gas precautions (carbon monoxide)
• Carbon monoxide can be present with other exhaust fumes. Therefore, if you smell exhaust fumes of any kind inside your vehicle, have it inspected and repaired immediately. If you ever suspect exhaust fumes are coming into your vehicle, drive it only with all the windows fully open. Have your vehicle checked and repaired immediately.

WARNING - Exhaust
Engine exhaust gases contain carbon monoxide (CO). Though colorless and odorless, it is dangerous and could be lethal if inhaled. Follow the instructions on this page to avoid CO poisoning.
• Do not operate the engine in confined or closed areas (such as garages) any more than what is necessary to move the vehicle in or out of the area.

• When the vehicle is stopped in an open area for more than a short time with the engine running, adjust the ventilation system (as needed) to draw outside air into the vehicle.

• Never sit in a parked or stopped vehicle for any extended time with the engine running.

• When the engine stalls or fails to start, excessive attempts to restart the engine may cause damage to the emission control system.

**Operating precautions for catalytic converters**

**WARNING - Catalytic converter**

Keep away from the catalytic converter and exhaust system while the vehicle is running or immediately thereafter. The exhaust and catalytic systems are very hot and may burn you.

**WARNING - Fire**

• Do not park, idle or drive the vehicle over or near flammable objects, such as grass, vegetation, paper, leaves, etc. A hot exhaust system can ignite flammable items under your vehicle.

• Also, do not remove the heat sink around the exhaust system, do not seal the bottom of the vehicle or do not coat the vehicle for corrosion control. It may present a fire risk under certain conditions.
Your vehicle is equipped with a catalytic converter emission control device. Therefore, the following precautions must be observed:

- Use only UNLEADED FUEL for gasoline engines.
- Do not operate the vehicle when there are signs of engine malfunction, such as misfire or a noticeable loss of performance.
- Do not misuse or abuse the engine. Examples of misuse are coasting with the ignition off and descending steep grades in gear with the ignition off.
- Do not operate the engine at high idle speed for extended periods (5 minutes or more).
- Do not modify or tamper with any part of the engine or emission control system. All inspections and adjustments must be made by an authorized Kia dealer.
- Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire, damaging the catalytic converter.

Failure to observe these precautions could result in damage to the catalytic converter and to your vehicle. Additionally, such actions could void your warranties.

CALIFORNIA PERCHLORATE NOTICE
Perchlorate Material-special handling may apply. See www.dtsc.ca.gov/hazardouswaste/perchlorate.

Notice to California Vehicle Dismantlers: Perchlorate containing materials, such as air bag inflators, seatbelt pretensioners and keyless remote entry batteries, must be disposed of according to Title 22 California Code of Regulations Section 67384.10 (a).

</tr>
</tbody>
</table>

⚠️ CAUTION

*When replacing tires, use the same size originally supplied with the vehicle. Using tires of a different size can damage the related parts or make them work irregularly.*

* NOTICE

- We recommend that when replacing tires, use the same originally supplied with the vehicles. If not, that affects driving performance.
- When driving in high altitude grades, it is natural for the atmospheric pressure to decrease. Therefore, please check the tire pressure and add more air when necessary. Additionally required tire air pressure per km above sea level: 1.5psi/km

### RECOMMENDED LUBRICANTS AND CAPACITIES

To help achieve proper engine and powertrain performance and durability, use only lubricants of the proper quality. The correct lubricants also help promote engine efficiency that results in improved fuel economy.

These lubricants and fluids are recommended for use in your vehicle.

<table>
<thead>
<tr>
<th>Lubricant</th>
<th>Volume</th>
<th>Classification</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td></td>
<td><strong>2.0 L GDI</strong></td>
<td></td>
</tr>
</tbody>
</table>

<sup>1</sup> Refer to the recommended SAE viscosity numbers on the next page.

<sup>2</sup> Engine oils labeled Energy Conserving Oil are now available. Along with other additional benefits, they contribute to fuel economy by reducing the amount of fuel necessary to overcome engine friction. Often, these improvements are difficult to measure in everyday driving, but in over time, they can offer significant cost and energy savings.

<sup>3</sup> If the API service SM engine oil is not available in your country, you are able to use API service SL.

</tbody>
</table>
**Recommended SAE viscosity number**

Engine oil viscosity (thickness) has an effect on fuel economy and cold weather operating (engine start and engine oil flowability). Lower viscosity engine oils can provide better fuel economy and cold weather performance, however, higher viscosity engine oils are required for satisfactory lubrication in hot weather.

Using oils of any viscosity other than those recommended could result in engine damage.

When choosing an oil, consider the range of temperature your vehicle will be operated in before the next oil change. Proceed to select the recommended oil viscosity from the chart.

<table>

</tr>
</tbody>
</table>

*1: An engine oil displaying this API Certification Mark conforms to the international Lubricant Specification Advisory Committee (ILSAC). It is recommended to only use engine oils that uphold this API Certification Mark.
VEHICLE IDENTIFICATION NUMBER (VIN)

The vehicle identification number (VIN) is the number used in registering your vehicle and in all legal matters pertaining to its ownership, etc. The number is punched on the floor under the front passenger seat. To check the number, remove the cover (1).

The VIN is also on a plate attached to the top of the dashboard. The number on the plate can easily be seen through the windshield from outside.

VEHICLE CERTIFICATION LABEL

The vehicle certification label attached on the driver's side center pillar gives the vehicle identification number (VIN).
The tires supplied on your new vehicle are chosen to provide the best performance for normal driving. The tire label located on the driver's side center pillar gives the tire pressures recommended for your vehicle.

The engine number is stamped on the engine block as shown in the drawing.

The refrigerant label is located on the underside of the hood.
CONSUMER ASSISTANCE (U.S. ONLY)

Roadside Assistance is provided on all new current model year Kia Vehicles from the date the vehicle is delivered to the first retail buyer or otherwise put into use (in-service date), whichever is earlier, for a period of 60 months or 60,000 miles, whichever is earlier, subject to the terms, conditions and exclusions set forth in the Kia Warranty and Consumer Information Manual applicable to your model year vehicle.

KMA reserves the right to limit or deny services or other benefits to any owner or driver when, in KMA’s judgment, the claims and/or service requests are excessive in frequency or type of occurrence.

Toll free consumer assistance

Kia’s toll-free Consumer Assistance hot line is staffed from 5:00 AM to 6:00 PM PST, Monday through Friday and is accessible by dialing 1-800-333-4Kia (4542). For more information regarding assistance available, please refer to your Kia Warranty & Consumer Information Manual.

Emergency roadside assistance

Kia’s toll free Roadside Assistance hot line is staffed 24 hours a day, 365 days a year and is accessible by dialing 1-800-333-4Kia (4542).

Please note that you must provide your Vehicle Identification Number (VIN) to verify coverage at the time of your call. The VIN can be found on the dash of your vehicle on the driver’s side, on the door jamb of the driver’s door, your vehicle’s registration or proof of insurance card.

Kia utilizes a network of over 17,000 roadside assistance providers. Should you accidentally run out of fuel, require a battery jump, or need help changing a tire, a Kia Roadside Assistance Representative will dispatch someone to deliver a small quantity of gas, change a flat tire with your inflated spare, or arrange a battery jump to allow you to proceed to your destination. We have access to a network of over 10,000 locksmiths to help you should you become locked out of your Kia.

In the event that mechanical difficulty renders your vehicle undriveable due to a warranty-related concern, Kia’s Roadside Assistance Representative will arrange to transport your vehicle to the nearest Kia dealer or to an alternative service location.
Your vehicle must be accessible to our dispatch transport vehicle, as determined by our driver, to receive this service. In the event that Kia does not have a dealer or an alternative service location available in a particular location, Kia will work with a reputable local service facility to ensure that you receive prompt service. Warranty repairs are performed at no cost.

**NOTICE**

Roadside Assistance benefits are not available for any Kia vehicle that has ever been or should be issued a “salvage” title or similar “branded” title under any state’s law or has been declared a “total loss” or equivalent by a financial institution or insurance company.

**Trip interruption**

Trip interruption expense benefits are provided in the event that a warranty-related disablement occurs more than 150 miles from your home, and the repairs require more than 24 hours to complete. Reasonable reimbursement is included for meals, lodging, or rental vehicle expenses. Trip interruption coverage is limited to $100 per day subject to a three day maximum limit per incident. You must contact the Kia Roadside Assistance Center to obtain pre-authorization of expenses. Once the Kia Roadside Assistance Center gives authorization for trip interruption benefits, they will assist you in making the necessary arrangements. Insurance deductibles, expenses, and claims paid by your insurance company or other providers are not eligible for reimbursement. Fleet vehicles are excluded from reimbursement under Kia’s Trip Interruption Policy.
Registering your vehicle in a foreign country

If you plan to register your vehicle in a foreign country, you should confirm that it conforms to the regulations in that country. Even if you successfully register the vehicle in a foreign country, you may experience the following problems and should therefore consider the possibility of having to deal with them:

1. The fuel specified for your vehicle may be unavailable. If other than the specified fuel is used, it could cause damage to the engine, the fuel injection system, and other fuel-related parts which may not be covered under your New Vehicle Emissions Limited Warranty.

2. We must, therefore, clearly state that when you leave the country in which you purchased your Kia new and register it in another country, problems arising from the use of fuel other than the specified fuel are not subject to manufacturer’s warranty. Because vehicles like yours may not be marketed in the new country of registration, parts, servicing techniques and tools necessary to maintain and repair your vehicle may be unavailable.

Even if vehicles like yours are sold there, mechanical specifications required by the government may vary enough from the country of purchase to cause additional problems.

3. There may not be an Authorized Kia Dealer in the area in which you plan to register your vehicle. You may additionally experience difficulty in obtaining services in a foreign country for any number of reasons. Further, we cannot assume any responsibility for problems that result from unsatisfactory service or lack of service outside of the United States.
ELECTRICAL EQUIPMENT (U.S. ONLY)

The electrical system of your vehicle is designed to perform under all reasonably expected operating conditions. However, before any additional electrical equipment is installed in your vehicle, consult an Authorized Kia Dealer, in order to ensure that you do not void your warranty.

Certain electrical equipment, or the way in which it is installed, may adversely affect the operation of your vehicle, including such systems as the engine control system, the audio system and the electrical charging system and thus potentially void all or part of your warranty.

We assume no responsibility for any expense you may incur or for any malfunction of your vehicle or any of its components or systems that may result from the installation of additional electrical equipment that is not supplied, or recommended for installation by, Kia.

Installation of a mobile two-way radio system

If a mobile two-way radio system is installed improperly, or if an excessively powerful type of system is used, other electronic systems may be adversely affected. To avoid damage to your vehicle, consult an Authorized Kia Dealer concerning the proper equipment and installation.

Kia motor vehicles are designed and manufactured to meet or exceed all applicable safety standards.

For your safety, however, we strongly urge you to read and follow all directions in this Owner's Manual, particularly the information under the headings “NOTICE”, “CAUTION” and “WARNING”.

If, after reading this manual, you have any questions regarding the operation of your vehicle, safety issues and defects please contact your Kia's toll-free Consumer Assistance hot line as below:

National Consumer Affairs Manager
Kia Motors America, Inc.
P.O. Box 52410
Irvine, CA 92619-2410
1-800-333-4Kia (4542)
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Kia Motors America, Inc.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Kia Motors America, Inc.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; download the SaferCar mobile application; or write to: Administrator, NHTSA, 1200 New Jersey Ave. SE., Washington, DC 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.

REPORTING SAFETY DEFECTS
(U.S. ONLY)

ONLINE FACTORY AUTHORIZED MANUALS
(U.S. ONLY)

The following publications are available on www.KiaTechinfo.com.

Service manual:
This manual covers maintenance and recommended procedures for repair to engine and chassis components. It is written for the Journeyman mechanic, but is simple enough for most mechanically inclined owners to understand.

Electrical troubleshooting manual:
This manual complements the Service Manual by providing indepth troubleshooting information for each electrical circuit in your vehicle.

Owner’s manual:
This manual describes the overall features and operating procedures for the vehicle.

WARNING – California Proposition 65

“Operating, servicing and maintaining a passenger vehicle or off-road vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle.”
